15696. (Chairman.) I believe you have received certain letters which have been addressed to the Commission?—I have. The first letter I have to bring to notice is a letter addressed to the President of the Royal Commission from Rai Isari Prasad, who was under examination at Patna. His letter is as follows:—

KALIASHTHURI,

PATNA CITY;

The 9th January 1894.

To

The President, Royal Commission on Opium.

MY LORD,—In my deposition before the Commission I made reference to a letter from some of the opium officials to me asking me to encourage opium cultivation on my land, and I further said that I would send the above letter, if found, to the Commission. I have now found that letter, which I have the honour to enclose herewith, as also a translation of the same.

I have the honour to be,

MY LORD,

Your most obedient servant,

RAI ISARI PRASAD.

II

15682. Is it not the case that working men very often take liquor when they do not give it to their wives and families?—Yes. They do for some reason.

15683. I presume the question of expense comes in. The wage-earner smokes tobacco and takes some stimulant when the woman does not get either; he works and he requires some stimulant perhaps?—In the lower classes males and females work together.

15684. Still the working man would have the stimulant when the working woman would not get it?—It would not be a question of expense, but it would be a question of morality. He may do an immoral act but will not allow his wife to do the same.

15685. (Sir James Lyall.) Assuming that the use of opium in Lucknow is chiefly for luxurious use or what you may call immoral use, do you not think that there are malarious parts of the country where the use of opium is chiefly a sort of quasi-medical use?—I cannot say, my experience being confined to this province only.

15686. You have no knowledge?—I cannot say for what purpose it is used in some places, but at least in Lucknow it is not used as a preventive for malarious diseases. If you collect the prescriptions for ten years of all the Attars who dispense medicines in Lucknow, out of ten or twenty thousand you will hardly find three or four prescriptions where opium has been used for malarial diseases. The English Government has been here for the last fifty years. The majority of people have some prejudice against English doctors, and so the majority of them have recourse to these Vaidis and Hakims. If you collect the prescriptions which these Attars have got during the last ten years you will find how insignificant the amount of opium is that they have dispensed.

15687. Is not that also explained by the fact that anybody can get opium without going to the Attars?—Nobody can say that opium can be had more easily than water, but in every prescription you will find the quantity of water given.

15688. (Sir William Roberts.) Are you equally against the use of alcohol?—Yes, more than against the use of opium, because there is also religious prohibition against alcohol.

15689. How many prescriptions have you seen in your lifetime?—I think at least 200 prescribed by native Hakims.

15690. You spoke of 10,000?—I submit that if you were to collect the prescriptions, you would find what I have said to be the case. I mean upon an average.

15691. How do you know?—We can find out what the drug is which is sold to a greater amount in every shop.

15692. How many druggists have you consulted?—I know four or five who are the best of the whole lot in Lucknow.

15693. Have you gone to them?—Not all of them.

15694. You are speaking speculatively?—If you go to the best of them you will find that they have not dispensed more than one seer during the last ten years.

15695. (Mr. Wilson.) What is your religion?—I am a Brahmin.

The translation is as follows:—

From H. BLAIRE, Sub-Deputy Opium Agent,

Patna District.

My kind friend, Rai Isari Prasad Sahib of Kucha Harmandil, may God Almighty grant him long life. After compliments and supplication be it known that I send the bearer of this, Munshi Mitran Lal, Moharrir, in charge opium zoomashta, Kothee Phulwari, District Patna, to you with a view that you would make arrangement for cultivation of poppy on as much area as you can afford. I should feel much obliged to you for it.

H. BLAIRE,

12th September 1893.

Sub-Deputy Opium Agent

The next communication I have to bring before

U

Mr. J. P.
Hewett.

Mr J. P. you is from Sir William Hudson. It is directed to Your
Hewett. Lordship and is as follows :—
From
13 Jan. 1894. SIR WILLIAM HUDSON, K.C.I.E.,
Sealia, Chumparan,
To

The Right Honourable LORD BRASSEY,
President, Royal Opium Commission.

MY LORD,—Amongst other non-official residents of the province I received a public notification that if I desired to tender evidence to the Commission I should attend in Calcutta during the latter part of November. From the reports of the sittings of your Commission published in the daily papers, however, I perceived that any evidence I could give, you had already heard *ad nauseam*. I therefore wrote to your Secretary declining to tender any. Subsequently I perceived that questions affecting the agricultural community

with reference to opium cultivation had been brought before your Commission, and as you were about to take evidence at Bankipore, I volunteered, through the Commissioner of the Division, to tender evidence on these points, upon which my long experience and close relations with the agricultural population might be of use to your Commission. Unfortunately, after I had sent a *précis* of what I had wished to say to the Commissioner, I was prevented by illness from attending your sittings at Bankipore. I much regret this, and now have the honour to forward you a copy, in the hope that should you deem my evidence of any value, you will, under the circumstances, accept it.

I have the honour to be,

MY LORD,

Your Lordship's most obedient servant,
W. B. HUDSON.

(*Précis of SIR WILLIAM HUDSON'S Evidence.*)

I have resided in Behar for nearly 30 years, and during that period have been in close contact with the agricultural population of all classes. Am proprietor of two large indigo concerns, seven factories in all, scattered over 200 square miles of country. Eighteen thousand raiyats pay me rent and grow indigo for me.

As a matter of business and having only regard to the production of indigo I should be well pleased to see opium cultivation prohibited, as the lands on which opium is now grown would then be available for my indigo crop, and they are invariably the best and generally highly manured.

On the other hand, as a zemindar I cannot too strongly protest against any interference with the present system of opium cultivation, unless it be in the direction that Government should give a larger share of the profits derived from opium to the cultivators.

No other crop could take its place in these sub-Terai districts, where tobacco is not grown; nor could my raiyats afford to forego the cash advances received by them at the most critical time of the agricultural season.

A cessation of opium cultivation in Behar would be calamitous for the agricultural population, and we zemindars would suffer severely.

In my long and intimate experience of, and dealings with, raiyats in Champaran district, I personally have never had an instance of a raiyat desiring to relinquish his opium cultivation. On the contrary, I have invariably found them (more especially the low castes and poorer families) eager to engage in it and always offering the pick of their holdings for it.

On the general question I am of opinion that it would be easier to lose and reconquer India than to prohibit the growth of opium and eradicate the opium habit. It would be quite as difficult a task and a more stupendous one than to prohibit alcohol to the British race. Every native with whom I have conversed on the subject treats the idea with contempt, and many question the objects that underlie the present agitation, even going so far as to declare their opinion that it is merely the outcome of fanaticism worked on by the liquor interest in England.

The witness withdrew.

Adjourned to Monday next, the 15th instant, at Umballa.

At the Old Mess House, Umballa.

FORTY-SIXTH DAY.

Monday, 15th January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAW.
" ARTHUR PEASE.
" HARIDAS VECHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

Mr. G. M.
Ogilvie.

MR. G. M. OGILVIE called in and examined.

15697. (*Chairman.*) I believe you are Officiating 2nd Financial Commissioner for the Punjab?—Yes.

15698. Looking at the question which has been referred to this Commission, what do you consider the most notable fact connected with it in the Punjab?—The most notable fact in connection with the consumption of opium in the Punjab is that it is largest in those districts which contain the best class of agriculturists and the flower of the Punjab peasantry. Opium-eating is also peculiarly the custom of

the Sikhs, who were formerly the ruling race in the province, and who are still distinguished above other races for courage and energy. Besides the inhabitants of the chief consuming districts, a certain proportion of the people, belonging to the agricultural and trading classes throughout the province, practice the habit of opium-eating. Consumption by these classes of people is generally regulated on the principle of moderation; and it is also a recognized fact that the practice is more beneficial in mature age than in youth. The evidence of the provincial witnesses will,

I believe, support this statement. The effects of such consumption, as shown by the physical and moral condition of the consumers, prove that the practice is generally innocuous, and probably, to a certain extent, even beneficial. I have had ample opportunity during my long service in this province of observing most things connected with the habits and character of the people; and I can confidently state that I have practically seen no evil effects produced by the habit of opium-eating. Occasionally I have known persons who indulged in the habit to excess; but these cases were rare, and I have observed that the condition of such persons is by far less debased than that which would result from the excessive use of ardent spirits. The practice of opium-eating must be distinguished from that of smoking preparations of the drug. This use of opium is generally reprobated, it is not practised by the peasantry, and is, I believe, generally confined to the vicious classes of the population.

15699. With reference to the statistics of consumption, I presume that they are fully given to us in the memorandum of the Excise Commissioner?—Very fully.

15700. You know that there is a proposal before this Commission that the use of opium should be restricted in India to medical purposes: how do you think that such a proposal would be regarded by the people of the country?—The restriction of the use of opium to medical purposes, or such an enhancement of its price as would practically put the drug out of the market, would arouse in all opium-eaters feelings of consternation and resentment. That part of the population which does not use opium,—although it would be individually unaffected by the supposed restrictive measures,—would nevertheless sympathise with those who suffered from them. The vast majority of the population, including the masses of the agricultural and trading classes, would regard the action of Government as vexatious, and they would not admit that the object in view was either necessary or sufficiently desirable to justify such an arbitrary measure. There is no repugnance to the practice of opium-eating amongst those who do not use the drug. Whether a native of the Punjab eats opium or not is a matter of taste and habit, largely dependent on his surrounding circumstances. The whole people would ridicule the idea of opium being of the nature of a poison, and would repudiate the notion of its use involving any moral degradation. It would be difficult, I think, to discover any act, within the range of action open to a civilised Government, which would be more calculated to excite discontent than the forcible repression of the practice of opium-eating in this province.

15701. If such a prohibition were enforced, it would naturally involve a loss of revenue to the Government and, supposing it were necessary to meet that loss of revenue by increased taxation, how would the people regard that loss?—With regard to the question whether the people would willingly bear any part of the cost of prohibitive measures, it is obvious that, in order to give any colour to this idea, it would be necessary to presume the existence of a party of sufficient numbers to carry weight, opposed by conviction and on principle to the policy of an excise on opium. I do not believe that any such party exists in the province, and there are certainly no representatives of any such party to be found amongst the masses of the agricultural and trading classes. I am aware that a certain small section of press-writers in the Punjab, as elsewhere, profess to hold the opinion that Government ought not to derive any profit from the use of opium by the people. But opium, as used by the people of India, is not a poisonous drug, and there is no intrinsic difference between the excise on opium and any other kind of excise, as, for example, the duty on spirits and tobacco in England. This is the view which, to my belief, is taken by all the educated men in this province, whose opinions are unbiassed by political motives. The idea, if any such idea was ever entertained, that the people of this country would voluntarily accept any self-sacrifice for the object of abolishing the excise of opium is quite chimerical.

15702. We have had the advantage of having your evidence-in-chief put before us, in the first instance, in the form of an abstract. It has been found exceedingly convenient that we should be supplied with the principal evidence of the witnesses in that form. Have you found in this district that the preparation of abstracts by native witnesses has been attended with rather exceptional difficulty?—I have to explain that the abstracts of the evidence to be given by the provincial unofficial witnesses from British territory were in some cases prepared by the witnesses themselves, and in some cases were written down by officials to the dictation of the witnesses. The latter course was only adopted with the object of assisting those witnesses who were not accustomed

to literary composition. I believe that the abstracts in all cases represent very fairly and accurately the views of the witnesses, but I make the above statement because it has been pointed out that the more strictly correct course would perhaps have been to have left the witnesses to prepare their own abstracts in all cases without assistance.

15703. (Mr. Pease.) I gather that it is the general practice among the peasantry here to take opium: is that so?—A very large percentage of them do so. The "general practice" would mean the practice of the majority. I am not prepared to say that it is the practice of an absolute numerical majority, but it is the practice of a very large proportion.

15704. Have you observed any difference between those who consume opium and those who do not as to their health and ability to work?—No. I can distinctly say that I have observed no such difference.

15705. Then we are not to imply from your statement that the practice is probably, to a certain extent, beneficial; that those who take opium are better men than those who do not?—No. I wish it to be understood that I believe the practice in some cases to be beneficial, that is, in preventing diseases. I do not think that the practice of eating opium is absolutely beneficial to healthy persons, although it is not noxious.

15706. For what diseases would you suggest that opium should be taken as a preventive?—I have ascertained by inquiry that the diseases against which it is usually taken are agues, fevers, and various diseases of a catarrhal nature.

15707. I think we have never learned yet that any medical man has advised a person in health to take opium as a preventive of a disease from which he had not already suffered, is this district an exception to that rule?—I am stating only the result of what I have heard. As I have already said, I have heard that opium is taken as a preventive against these ailments.

15708. Not by persons who have never suffered from them, I presume?—Probably not.

15709. You say there is no repugnance to the practice of opium-eating amongst those who do not use the drug: we have frequently been told that those who take it in moderation are unwilling that it should be known that they are consumers, is that the case here?—I think not.

15710. (Mr. Wilson.) With reference to your statement that "this is the view which, to my belief, is taken by all the educated men in this province whose opinions are unbiassed by political motives," do we understand that if any educated persons were to give a contrary opinion you would rather imagine that they were influenced by political motives?—I think so.

15711. (Mr. Mowbray.) You referred to your long service in this province, will you tell us what that long service has been and what opportunities you have had of judging of the feeling of the people?—I have had 30 years of service in the Indian Civil Service, of which 29 years have been spent in this province, during which I have risen through the various grades from the lowest step in the service up to my present position of Officiating Financial Commissioner.

15712. I suppose I may take it that in your subordinate positions you had perhaps larger opportunities of coming intimately into connection with the people of the districts than you have as Financial Commissioner at the present moment?—I have had very large opportunities of coming into close acquaintance with them.

15713. Have you any suggestion to make as to the possibility of prohibiting smoking as distinct from eating?—The smoking of opium in the form of *madak* and *chandu* is already so strongly discouraged in this province that it exists to a very moderate extent. Licenses are no longer given for the sale of those preparations of opium.

15714. Do you think that the closing of these license-shops has led to a large increase of private unlicensed places, where people smoke?—It is only a district officer who can give a distinct answer to that question; but my own impression is that it is not so, but that, on the contrary, the measures taken have been effectual, and that the practice of opium-smoking is rapidly decreasing.

15715. (Mr. Fanshawe.) You spoke of the use of opium in mature age: would you intend it to be understood that this was for medical use or rather for use as a restorative?—I made that statement, because, from inquiries made lately, it has been brought to my notice that people say that after the age of 40 the use of opium is more beneficial than it is in youth.

Mr. G. M.
Ogilvie.

15 Jan. 1894.

Mr. G. M.
Ogilvie.

15 Jan. 1894.

15716. That would not be, I understand, a direct medical use?—No; rather to keep up the strength of the body and to stave off old age, that is the idea of the people.

15717. Have you had any experience of the use of opium as a restorative or stimulant in the case of cold or fatigue?—I cannot say that that has come absolutely within my own personal experience; but from inquiry I have learned that that is one of the chief good effects considered to be derived from opium protection against catarrhal ailments of all kinds.

15718. You intended catarrhal ailments of all kinds to include protection against chills and cold?—Yes.

15719. With regard to its use in enabling a man to undergo fatigue, has that come within your knowledge?—Certainly; that is also one of the chief benefits alleged to be derived from the habit of opium-eating.

15720. You say that opium-eating is not generally reprobated: in making that general statement you refer to opium-eating in moderation, not in excess?—Certainly.

15721. (*Sir James Lyall.*) I believe that opium-smoking is a habit introduced into the Punjab by the camp followers of regiments and people from Bengal within the last 20 or 30 years?—Yes, it is so stated. It is a matter of history that I cannot say I have personally inquired into, but I believe the note on the subject has been prepared after careful inquiry, and it states that such is the case.

15722. It is a gregarious habit, I believe, and the saloon in which it is carried on naturally attracts bad characters?—I never was in a district where there were opium-smoking dens, as they are called; but from what I hear and from what has come under my official observation, I believe that that was the case that these places were generally frequented by vicious characters of the population.

15723. Do you think that the popular condemnation of opium-smoking, which exists in the Punjab, was based upon an idea that it was more injurious to health than opium-eating, or upon the circumstances surrounding the habit like the bad character of the saloons and of the people frequenting them?—That is a question that I find it rather difficult to answer, but I am inclined to think that the opinion of the population generally is that opium-smoking is deleterious, whereas opium-eating is not so.

15724. You have not any distinct opinion of your own?—I have a distinct opinion, from all I know and see of the people, that the habit of opium-eating in moderation is

The witness withdrew.

Mr. T. G.
Walker.

Mr. T. G. WALKER, Commissioner of Excise in the Punjab, called in and examined.

15732. (*Chairman.*) You attend for the purpose of putting in a comprehensive note or memorandum descriptive of the system of opium excise in the Punjab and giving details of the consumption?—Yes.

15733. We shall have the advantage of studying it and you will be able to attend later on for the purpose of being examined or giving any explanation that may be needed?—Yes.

15734. (*Sir James Lyall.*) I should like to ask one or two questions now. The memorandum you have put in relates to your experience as Excise Commissioner, but I remember that you were Settlement Officer for some years at Ludhiana?—Yes.

15735. That is a district in which there is a very large Sikh population. Have you any knowledge of the extent to which the rural population of the district use opium?—I was not asked to give my experience as an officer of the Government in general service. I could make an abstract of my evidence in that capacity and put it in separately.

15736. Did you study the subject at all?—The subject did not force itself upon my attention during the six or seven years I was in the Ludhiana district. I did not make a special study of it, simply because it did not come under my notice; but I know as a fact, from my experience in Ludhiana and from more limited experience in the Native States adjoining Ludhiana and the Ferozepore district, that a very large proportion of the agricultural population are addicted to opium-eating, and I may say that the population of those parts excel, as far as I have seen, in physique and activity of mind and in every detail, the agricultural population of any other part of the Punjab that I have seen.

15737. You never came across in your large dealings for some years with the peasantry in making your settlement

quite innocuous; but, from the little I have seen of opium-smokers—I have seen very few—they bear the marks of the evil effects of the habit.

15725. Is it not probable that the opium-smokers whom you have seen were a debauched set of people naturally?—I have already said that I do not believe that the habit of opium-smoking is common to any section of the people, except the vicious classes.

15726. (*Mr. Wilson.*) What are the "political motives" by which persons who do not agree with you would be biased?—Not exactly who do not agree with me, but who do not hold this particular opinion, that "opium as used by the people of India is not a poisonous drug, and there is no intrinsic difference between the excise on opium and on any other kind of excise, as, for example, a duty on spirits and tobacco in England." I am not sure that I understand the question.

15727. You have said that a particular view is taken by all educated men in this province whose opinions are not biased by political motives. My question is, what are the political motives that you think would bias them?—What I meant by that sentence was that I think it quite possible that persons who are disaffected might advance the opposite opinion simply from motives of disaffection towards the Government.

15728. To embarrass them?—To embarrass the Government.

15729. May I ask whether your words apply only to the sentence you have first quoted, or to the two or three preceding sentences—the whole paragraph?—They apply especially to the preceding sentence.

15730. I will read another sentence: "I am aware that a certain small section of press-writers in the Punjab, as elsewhere, profess to hold the opinion that Government ought not to derive any profit from the use of opium by the people." Does the remark about political motives apply to that sentence also?—I think it must be held to apply to that. I have said that it applied only to the sentence immediately preceding, but I believe that the few instances in the press, in which that view has been put forward, it has been dictated by political motives.

15731. Would the fact that they held, or at all events expressed, the opinions that Government ought not to derive any profit from the use of opium by the people, be in itself evidence that they were disaffected?—It would be such an unfair statement that to my mind it would probably be made with the object of embarrassing the Government.

any people who may be said to have been physically or morally wrecked by the use of opium?—Certainly not. On the contrary, the people that I have known to be opium-eaters have appeared to me to differ in no way from those who are not opium-eaters. I have seen men of advanced years, men of 60 or 70, going along the road riding or walking, pulling out an opium box and taking a small supply of opium—an opium pill. That is the only way by which one could know that such a person was an opium-eater. It never occurred to me to enquire.

15738. I believe there are two tracts in the Ludhiana district, the upland tract, upon which the population is generally Jat Sikh, and the lowland, in the bed of the river Sutlej, in which the majority of the population is Mahomedan?—Yes.

15739. Do you know whether the Mahomedans use opium as well as Sikhs?—I believe some of the Mahomedans, Dogars, and Rajputs, do use opium, at all events in the severe damp along the valley of the Sutlej.

15740. Is there not a very marked contrast between the energy and industry of the Jat Sikh population on the higher lands and that of the population of the river lands?—A very marked contrast. As I have said, I consider the inhabitant of the upland tract, what is known as the Malwai Jat, is superior in physique and mental vigour to the inhabitants of any other part of the Punjab or, indeed, of India. They are the finest peasantry in India in my opinion.

15741. Do the Malwai Jats give a large number of recruits to our regiments?—I should say to our best regiments. The 14th and 15th Sikhs, I believe, stand the highest, and they are composed of Malwai Jats, including, of course, in the term, men from the Native States as well as from Ludhiana and Ferozepore.

15742. I believe they also send a large number of recruits to the Burma Military Police?—I believe so, but that is since my connection with Ludhiana ceased. I have not been there for the last ten years. The Burma Police has been organised since then.

15743. It is these Malwai Jat Sikhs (who are ordinarily supposed to be one of the finest races in the Punjab) who are most addicted to the use of opium?—Certainly.

The witness withdrew.

LIBUTENANT-COLONEL J. G. KELLY called in and examined.

15746. (Chairman.) I believe you command the 32nd Pioneers?—I do.

15747. What is the strength of your regiment?—912, but at present it is 29 under strength.

15748. Of that total strength how many are consumers in what you consider to be in excess?—There are very few who really take it in excess. The number is 34.

15749. Excess being a consumption of how much daily?—One ratti and over—from one ratti to three rattis I should consider excess.

15750. How much in grains?—There are 8 rattis to a masha, and 12 mashes go to a tola. One ratti is equal to $1\frac{1}{2}$ grain Troy.

15751. What is the number of those who take in moderation under one ratti daily?—16.

15752. And occasional consumers?—114.

15753. With regard to these occasional consumers, who are by far the larger number, why do you think that they take opium?—They do so because after a long march you can see them taking out their little boxes, which they use to keep their opium in, and they ask their comrades for little pills of opium. From enquiries I have made, they take it in the cold weather in order to preserve them from catarrh, which the natives call nashi or influenza. They say if they take opium it prevents their being attacked.

15754. Is there any particular age at which the men commence?—I think between 28 and 30, when their strength begins to fail, they take opium. They also say that if they take it they are able to walk much better—to go a greater distance.

15755. Suppose the use of opium in this form were prohibited, how would the men regard such a restriction?—At present they do not understand the matter. I think they would resort to other stimulants.

15756. Would it at all tend to affect the discipline of the regiment?—A spirit of unrest would undoubtedly arise.

15757. Does the consumption of opium in your regiment affect discipline in any way?—Not at all. If it had not been for my enquiries, I should not have known that they were so addicted to opium.

15758. You have told us that the men claim that in the cold, such as that at Sikkim, the use of opium is particularly beneficial?—Yes.

15759. And that under its influence they are enabled to endure more fatigue?—Yes. Pioneer regiments also go to outlandish places. In making the Hurnai Railway they used to have opium given to them by the Railway authorities and the engineers in charge. I was not Commander of the regiment, but these facts were communicated to me.

15760. Is the supply of opium from time to time, in special circumstances of service, furnished to the men from the Commissariat Department on the recommendation of the medical officer?—When they go on service they generally take away as much as they possibly can; sometimes they have it sent to them by post.

15761. That is a private supply?—Yes. In Sikkim we had four pounds of opium given us to be given to the men when they required it on the medical officer's certificate.

15762. That was a particularly arduous service?—Yes; they were employed in the snow in making roads, and also in fighting with the Thibetans at the same time.

15763. Are there any other points that you would like to mention in your evidence-in-chief?—I may mention that the Musbee Sikhs, of which this regiment is composed, are very fond of rum whenever they can get it.

15764. Do you think that if the use of opium were prohibited there would be an increase in the use of alcohol

15744. I believe the consumption in Ludhiana is 21 ounces per 100 of the population?—Yes; it is the second highest in the province.

15745. (Mr. Pease.) Is this a population that abstains entirely from alcohol and tobacco?—Practically from tobacco; not from alcohol. The Sikh does take alcohol, but he is prevented by his religion from taking tobacco. It is one of the tenets of his faith not to smoke.

amongst them?—Yes. They are very fond of alcohol when they can get it.

15765. (Sir William Roberts.) From your description I take it that you regard the use of opium in a regiment very much like the use of tobacco?—Yes, except that the Sikh is prohibited from smoking by his religion.

15766. It appears that the majority of the regiment do not use opium at all, either habitually or occasionally?—I should be sorry to say that. I should say that at least 50 per cent. use it; but it is very difficult to find out whether they use it or not.

15767. Have you formed any opinion as to whether the men who do abstain absolutely from the habitual use of opium are any better in physique than the men who use it?—None whatever. You could not tell the difference between them.

15768. Not in the least, neither to their advantage nor disadvantage?—Except that those who take it in excess would probably be very stupid in their replies; but, in the case of moderate eaters of opium, you could not tell the difference.

15769. You say that those who take it in excess would appear stupid: is there any other effect that you have noticed?—Not specially.

15770. Has this stupidity been a temporary condition?—No; habitual I should say.

15771. They are habitually stupid?—Yes.

15772. (Mr. Pease.) Do you consider yours a fairly representative Sikh Regiment?—It is composed of a class of Sikhs called the Musbee Sikhs. There are three Pioneer Regiments. We try to get as many Musbee Sikhs into them as we can, but they are not entirely composed of them.

15773. I wanted to know whether you thought that it would be a fairly representative regiment of Sikhs with regard to opium?—Yes.

15774. Out of 912 you have only mentioned 34 who take two grains a day or more?—Yes, I must explain that these cases have been personally examined by myself. Originally when I enquired of the native officers, they gave me a far larger number, and I take it that the number given me by the native officers really represent the number of men who take opium. They do not like to confess it for various reasons. They imagine, perhaps, that I would not promote them.

15775. Do you consider that the numbers you have given us are reliable?—These are the numbers that I verified myself personally from the list given me by the native officers.

15776. With regard to those who take it to excess?—I think the number is about correct.

15777. Out of 912 you have only 34 who take more than two grains a day?—One ratti every day.

15778. (Sir James Lyall.) That is from the men's own admission?—Yes.

15779. Do you think that these admissions, in a matter of that sort, would be likely to err on the side of under-estimate?—Yes. They do not like to admit that they take opium.

15780. (Mr. Wilson.) They imagine that the knowledge that they take opium would be some bar to their promotion?—Yes.

15781. Would it be, as a fact, a bar to their promotion?—None whatever.

15782. Have they some feeling that it is not very creditable?—No. Amongst themselves they do not consider it discreditable, but they may feel that the British officers probably would think so.

15783. What was the duration of the expedition in which you got four pounds?—About two years.

Mr. T. G. Walker.

15 Jan, 1894.

Lieut.-Col. J. G. Kelly.

Lieut.-Col. J. G. Kelly. 15784. For 900 men?—Yes; 810 men and 40 followers were the actual numbers. I was not in command of the regiment at the time.

15 Jan. 1894. 15785. Then it was to be issued under medical advice?—Yes.

15786. You said something about the men being employed on railway service: are they commonly so employed?—Yes, we are continually employed in making roads. In fact, a sister battalion is now employed on the Chilas-Gigit road, and they have just made a road over the Babusar Pass.

15787. Are they State Railways?—The Hurnai was a State Railway, and the opium was given by the engineers in charge.

15788. (*Mr. Mowbray.*) With regard to these men who take to excess, do I understand that you formed an opinion that they took to excess because they themselves told you that they took over one ratti, or have you noticed that there are 34 men in the regiment who are dull and stupid owing to excess?—I obtained the results from the men's own admissions. The habit does not interfere with discipline at all.

15789. Have you ever had to discharge a man for being incapacitated from excess in the use of opium?—No.

15790. Have you ever discharged a man for drunkenness?—No.

15791. What is the general age of the men in your regiment?—I am not prepared to answer.

15792. May I take it that they are comparatively young men?—There are about 300 young men; the remainder, I suppose, would be 12 or 15, or 18 years in the service.

15793. At the outside they would not run up to 40?—I can present to you a native officer who is about to complete 32 years' service, and who will give you his evidence.

15794. He would enlist perhaps at 18?—Yes, they generally enlist at 18.

15795. I am speaking of the men in the ranks: there would not be many men in the ranks over 40?—No, very few.

15796. We have been told that the opium habit is much more widely extended amongst men of mature life than amongst comparatively young men?—That is so.

15797. Therefore you would naturally expect to find a lower average consumption among men in the ranks under 40 than you would in the agricultural class over 40?—I do not think they differ from their brothers at the plough.

15798. I mean in point of age?—I do not think so.

15799. The probability was that when they were older they would be more likely to consume opium?—Yes; when their strength begins to fail they begin to take opium.

15800. They would not get to that time of life when they were in the ranks?—The circumstances are different. They say when they go on these works that they are obliged to take opium on account of the cold and the hardships.

The witness withdrew.

SURGEON-CAPTAIN E. S. JENNINGS called in and examined.

Surgn.-Capt. E. S. Jennings.

15816. (*Sir William Roberts.*) I believe you are in medical charge of the 32nd Pioneers?—Yes.

15817. How long have you been in medical charge of the regiment?—Of this regiment only about four months.

15818. Have you had any other experience of the use of opium in India?—Yes, I was with the 22nd for some time. They have four companies of Sikhs, and every man in the regiment took opium more or less. It is a mixed regiment—Punjabis, Mussulmans and Sikhs.

15819. Most of them consume opium?—Every man in the Sikh company. Not every man in the regiment.

15820. What is your impression as to the effect of the opium habit amongst the soldiers of whom you have had medical charge?—I have never seen any harm from the use of opium. I have seen one case only in which there was any harm done. The man was a recruit, who had never taken it before. A comrade had given him a rather long dose, and for about 12 hours he was under the influence of opium. That is the only case I have seen in which the opium had any effect.

15821. That would be more a case of opium poisoning?—It was more a case of opium poisoning.

15801. In fact the men in the ranks rather take it for special purposes than habitually?—That is the reason they generally give.

15802. (*Mr. Haridas Veharidas.*) You say the age of admission is from 18?—From 16 to 25.

15803. In case of a vacancy, if there are two candidates, one taking opium and the other not, what would you do?—I never ask the question. I should expect a negative reply if I did.

15804. If you observed from one man's face that he was taking opium and from the other that he was not, whom would you prefer?—They would never admit it. I should not ask the question. If I did, they would undoubtedly say, no.

15805. But if you observed the symptom from the man's face?—I could not tell from looking at a man whether he was taking opium or not.

15806. (*Mr. Fanshawe.*) Have you any special reason for fixing one ratti as the limit of moderate consumption, because, from what we have been told, that seems rather a low limit?—My enquiries elicited that fact, that anything over a ratti would be considered by them as rather excessive.

15807. Is the fact that men take opium only during the cold weather in your experience well established?—Yes, according to the replies of the native officers.

15808. Do you think that the recruiting of your regiment would be affected if it were known that opium was not allowed except for medical purposes?—I am unable to express an opinion on that subject.

15809. If opium were not allowed, presumably the prohibition would be enforced in a regiment more strictly than among the peasantry themselves?—They might imagine that their privileges and freedom were being gradually curtailed, and that would give rise to a spirit of unrest.

15810. If it were known that the use of opium, except for medical purposes, were prohibited in a regiment, and that the prohibition would be more strictly enforced than would be possible in the villages, do you think that this would affect your recruitment?—I am unable to say. The general answer that I have given is probably the right one.

15811. (*Sir James Lyall.*) The Musbee Sikhs are a different race from the other Sikhs, are they not?—They are Sikhs according to brotherhood.

15812. Are they not a different race?—They are Sikhs.

15813. Sikh is a religious distinction, but the race is different, is it not?—It is to a certain extent.

15814. They could not intermarry or live together?—No. They could not intermarry with the Jat Sikh.

15815. The work of the Pioneers I believe is rather akin to the work of a railway engineering corps?—It is somewhat equivalent to the Sappers and Miners. We are equipped for everything—roads, fort building, and work of that kind.

15822. You say you have not observed any harm: have you any impression that the opium does them any good?—I think it is beneficial in this way, that it is a prophylactic, that bowel-complaints and so on are held in check by its use, and that it is useful in low-lying countries where rice is cultivated and where the ground is damp, and where diarrhoea is very prevalent.

15823. Do you speak of the men under your charge?—I have the medical sheets of the men who have taken opium. I see that the admissions for ague vary, but complaints like that have been very frequent. There is a marked decrease when a man takes opium.

15824. Have you any statistics that would show the proportion or the percentage of users of opium to non-users in the regiment of which you have had charge?—I have not at present; but I could make it out from the medical sheets. I could take certain representative cases or take them haphazard and compare them.

15825. Do you think that such statistics would help the Commission to arrive at the truth?—I should think so. Of course one regiment could not show much, but if it were done in every case, it would show to a certain extent whether it was so or not.

15826. You could distinguish between the men who were habitual opium-consumers and those who were not?—Yes.

15827. I suppose they would be somewhere about half and half?—I think so. There may be a large number who will not own to taking opium.

15828. (*Sir James Lyall.*) So that it might be rather deceptive?—You cannot be sure of every man, but I could take a sample haphazard, or let any man draw the cases.

15829. What is the reason why the men are so reticent?—I suppose they think it interferes with promotion.

15830. I suppose it is fundamentally based on the fact that Europeans in India do not use opium, and that they would be taken as disapproving of it?—It may be something of the sort.

15831. Is that your impression as to the reason of their reticence?—I cannot answer that question. I do not know whether it is so or not. It may be.

15832. (*Sir William Roberts.*) Is it your opinion from experience you have had that the use of opium has a certain prophylactic power against malarial complaints?—Since the Commission started I have tried opium medicinally for fevers with beneficial results, and if it is useful in fevers, it must be a prophylactic also.

15833. It is a febrifuge at any rate?—Yes.

15834. Of course it would only be a partial prophylactic in any case, because opium-consumers do constantly become affected with malarial fever?—Yes.

15835. Apart from that, it is useful in the case of persons who are compelled to live in malarial districts for its other effects on what one may call malarial complaints, such as neuralgia, rheumatic conditions, diarrhoea and dysentery?—Bowel complaints certainly.

15836. You think it is a protective in that direction?—Certainly.

15837. From actual experience?—Yes. Experience at Kajuri Kach, where I had 40 admissions with very severe diarrhoea, and I found that administering opium checked it at once.

15838. You have not found that habitual users were less liable to diarrhoea when they went into a malarial district?—No; I have not had any experience in that way.

15839. With regard to your opinion that it prevents a waste of tissue, I presume that is a speculative physiological idea?—Yes.

15840. Do you think that it prevents waste of tissue?—Yes.

15841. When there is an insufficient supply of food?—Yes. If a man has fatigue duty, I think it helps him to undergo that labour with less waste of tissue.

15842. You have no facts bearing on that question?—Except that in the 22nd Regiment, when they were up at Miranzai, they ran short of opium, and the men complained very much of fatigue; but as soon as they managed to get their opium again they were better.

15843. I presume you would say that preventing a waste of tissue will only be after two or three meals. You would not suggest that the effect would extend for months with deficient diet?—No.

15844. Would you regard the use of opium in healthy persons as a sort of stimulant or restorative?—Yes.

15845. I presume that is the reason why it is taken by healthy persons?—In the same way a man takes tobacco. It is soothing.

15846. (*Chairman.*) How would you sum up what you have stated?—That it is beneficial in its use; that it is a prophylactic; that it prevents waste of tissue; that it is a stimulant; that it is an intestinal sedative, anodyne and astringent.

15847. What do you think will be the consequence if its use is prohibited?—If it is prohibited, it will drive the men, especially Sikhs, to more pernicious drugs, such as Indian hemp and *dhatūra*, both of which grow wild; the result will be more harmful than the abuse of opium, which amongst the Sikhs is rare. Not only will these drugs be taken, but a more serious evil will arise—alcohol will be taken in larger quantities. I mention Sikhs especially, as they are prohibited the use of tobacco which other natives can use instead of opium, and although the Sikhs are prohibited the use of tobacco, they are not prohibited alcohol, and if opium be debarred them, they will resort to alcohol, Indian hemp, etc., in larger quantities.

15848. (*Mr. Pease.*) You have heard the evidence of Colonel Kelly?—Yes.

15849. I have put into percentages the numbers of the men that he has stated. There are about four per cent. who take one ratti or over, and somewhat under 2 per cent. who take it in moderation, and about 12 per cent. who take it for semi-medical use in cold weather, and 82 per cent. total abstainers: is it your impression that that is a correct statement of the condition of things in the 32nd Pioneers?—I cannot say whether your figures are wrong or right, because you can see nothing in a man to show whether he is an opium-eater or not. If he took it in excess you would be able to tell it. If he takes it in moderation, there is absolutely nothing to see.

15850. You have no reason to doubt the correctness of the estimate?—No.

15851. In the other regiment you say you think every man in the Sikh Company was a consumer. That is very different from the case of the regiment with which you are now connected. I should like to ask what means were taken to find out who were opium-consumers?—In the case of the sepoys in the regiment here, we asked if they were not taking opium, and as the Opium Commission is here and they thought they were going to be stopped, they denied it. But in the case of the regiment at Miranzai on active service, they had no reason to be afraid of knowing that they did take opium, and they asked for it.

15852. Did every man in the regiment ask for it?—I will not say that every man in the Sikh Company did, but a great number of them did.

15853. You said every man?—I will withdraw that—it was a great number.

15854. A considerable number?—A considerable number.

15855. (*Mr. Wilson.*) You have been on active service 2 years: did they apply to you as a Medical Officer for it?—Not as a medicine.

15856. To whom did they apply?—They applied to me, and they wanted me to apply to the Commissariat to obtain it for them.

15857. And you did not?—I could not. The Commissariat will not issue it.

15858. What did you do?—They got it themselves. I told them I could not get it through the Commissariat.

15859. When was that?—In 1891 I think.

15860. What expedition?—The Miranzai first expedition.

15861. We have had information that there was a regular system of issuing opium by the Commissariat to troops on active service by requisition: you were not aware of that?—No, I was not.

15862. You said that you have had some experience in malarious districts?—Not malarious, I referred to bowel complaints.

15863. Was that in the case of your former regiment?—Yes.

15864. A free use of opium did not save them from that. As a matter of fact it was these opium-eaters to whom you referred who made up this large number of admissions?—There were a great number from the regiment altogether. They were not Sikhs entirely who come in with these bowel complaints.

15865. Can you tell me whether there was a marked difference between those Sikh companies, of whom so large a proportion took opium, and the other men: did it strike you at the time?—I think it did, as far as I can remember, but I will not be absolutely certain.

15866. Do you consider that your present regiment or company is in any way inferior to the 22nd in its fitness for active service?—No, I do not. They are just as fit.

15867. The free use of opium by the other men did not give them any advantage over the present regiment, of whom only a small number take it?—No, I do not think it made any difference.

15868. In reference to the use of opium as a prophylactic against fever; when did that come first under your notice?—I think since I have been reading about the Commission.

15869. (*Mr. Mowbray.*) Are the Sikhs in the 32nd Pioneers the same class of Sikhs as those in the 22nd?—No, they are Jat Sikhs.

15870. (*Mr. Fanshawe.*) Do you agree with Colonel Kelly that the figures given by him represent the number of men who actually admitted that they took opium?—Yes.

*Surgn.-Capt.
E. S.
Jennings.*
15 Jan. 1894.

Surgn.-Capt. E. S. Jennings. 15871. Am I right in understanding that you believe that some number of men also take opium who have not admitted it?—I should say so.

15872. (*Sir James Lyall.*) Colonel Kelly said he thought it probable that about 50 per cent. of the men took opium :

The witness withdrew.

Subadar Jawahir Singh.

SUBADAR JAWAHIR SINGH called in and examined (through an interpreter).

15873. (*Sir James Lyall.*) Do you belong to the 32nd Pioneers?—Yes.

15874. What is your opinion in regard to the use of opium?—Our practice is to take it for a month or two in cold weather, or when we go into a place where it snows.

15875. Do you think it does any harm to the health when taken in moderation?—No.

15876. What do you think is moderation?—About 1 ratti.

15877. Do you mean morning and evening?—Most persons take it only once, some twice.

15878. If a man took it morning and evening, would that be excessive?—No.

15879. What class of ailments do you say it is good for?—For catarrh and for the effects of fatigue when on march. If a person can go 20 miles without opium, he can go 30 miles with it.

15880. Do your brotherhood generally take it when young, or when they get older?—When they grow older.

15881. At what age?—About 30 or upwards.

15882. Have you ever taken it yourself?—I take it for two months every winter—a quarter of a ratti.

15883. Have any men eaten so much as to become ill and unfit for service in your regiment?—No, the Guru's order is not to eat more than one ratti.

15884. Do the Musbee Sikhs eat as much opium as the Malwai Jat Sikhs, or is there any difference?—They eat more in Malwai regiments.

15885. Are there any Lobana men in your regiment?—Yes.

15886. Do they eat opium?—A few of them.

15887. (*Mr. Haridas Voharidas.*) Do you eat in this season?—Yes, in the winter; not in the hot weather.

The witness withdrew.

Surgeon-Maj. S. Little, M.D., M.R.C.P.

SURGEON-MAJOR STEPHEN LITTLE, M.D., M.R.C.P., called in and examined.

15901. (*Sir William Roberts.*) You are, I believe, Civil Surgeon at Mooltan?—Yes.

15902. What opportunities have you had of studying the effect of the use of opium amongst the natives of India?—I served in the Afghan War of 1879-80 with the 4th Bengal Cavalry, and also for some months at Gundamak; did duty in the General Field Hospital. Opium-eating did not prevail to any extent in my regiment, but about 15 per cent. of the patients in the Field Hospital were habitual consumers of opium. I marched back to India in charge of the native section of the General Field Hospital. Of the large numbers of camp followers and ambulance bearers who came under my observation, there were many who habitually consumed opium, but there was nothing in the character, conduct, want of stamina or liability to disease of such men to mark them out from their fellows. I was, however, new to the country and its ways, but I can vividly recollect my astonishment at the extraordinary powers of endurance of the ambulance bearers, the majority of whom were Hindus of small bone and apparently most inferior physique. I do not mean to assert that their endurance was due to the use of opium, but, as many were opium-eaters, the prejudicial influence of opium, had it existed, would have become apparent to me.

15903. What was the next point that attracted your attention?—My attention was, shortly after the Afghan War, particularly directed to the influence of the habitual consumption of opium on the human organism by my being appointed Surgeon to the 14th or Ferozepore Regiment of Sikhs. I remained in medical charge of this regiment for about 18 months, and accompanied it on service throughout the Mahsud-Waziri Expedition of 1881. The corps was exclusively a class regiment and recruited from the Cis-Sutlej or Malwa Sikhs. The men were all of the Jat or agricultural class and of an average height superior to that

does your experience bear that out?—It is so difficult to judge. There is no sign or symptom by which you could say that a man took opium or not. If he took it in excess you would be able to tell, but in small quantities you could not.

15888. Do you eat at the present time?—Yes.

15889. Have you taken any to-day?—Yes, this morning, once.

15890. (*Mr. Moubray.*) How many men in the regiment do you think take opium?—I do not know. They are chiefly the old men. Among the recruits there are very few who take it.

15891. (*Mr. Wilson.*) Is there a man in the regiment named Sanka Singh?—I do not know. There may be.

15892. Is there another man called Isbara Singh?—I do not know the names of all in the regiment.

15893. Have two men recently been dismissed?—I do not know.

15894. I have been told that two men have lately been dismissed from the company on account of opium?—I do not know.

15895. (*Lieutenant-Colonel Kelly.*) I dismissed two men the other day for theft. Almost the only men that I have dismissed have been dismissed for that reason. They have been tried by court-martial and received a sentence, necessitating their removal from the regiment.

15896. (*Mr. Wilson.*) Are you aware that the 22nd, to whom Dr. Little belongs, take more opium than your regiment?—I cannot tell.

15897. (*Mr. Pease.*) How long have you taken opium?—One or two years.

15898. Is your health better since you began to take opium than before?—I was in health before, and I only take a very small quantity.

15899. You cannot say that it has done you any good?—It is an advantage when taken for cold.

15900. Has it done you any good?—Yes.

The witness withdrew.

of the English Foot-guards of the Household Brigade. They form with the 15th and 45th Sikhs a brigade of a warlike race, having a physique and bearing which is, I believe, unsurpassed by any equal body of troops in the world. After joining the regiment I shortly became aware that the great majority, both of men and native officers, were habitual opium-eaters. The men used to carry opium on their persons in a little tin box, just as a century ago the English gentleman carried his snuff box in his fob. The young recruit would not arrive with his own opium box, but took to his opium much in the same fashion that the English yokel on joining the ranks usually acquires the habit of using tobacco and alcohol in moderation. The habit was not regarded as a vice by either officers or men, but looked upon in much the same light as the habitual consumption of alcohol is regarded in a British regiment. The religious tenets of the Sikhs prohibit the use of tobacco amongst them. The use of opium was not productive of military crime in any way, and the men in cantonments and on service were obedient, well-behaved and subordinate to a marked degree.

15904. Were you in medical charge of the regiment in the Waziri Expedition?—I was in medical charge of the regiment throughout the Waziri Expedition; and, as the corps formed practically a body of habitual opium-eaters, I am in position to speak with authority as to the influence exerted by that drug on their powers of endurance and capacity to undergo the fatigue and hardships of a soldier's life. In doing so, I am fortunately able not to rely upon my mere recollection of events now 12 years old, as I have preserved my annual report on the regiment for the year in question.

15905. Will you inform us of the nature of the observations you made?—We started off by making forced marches from Rawalpindi to Bannu. This march was described in my report in the following terms:—"The

distance, some 193 miles, was covered in under eleven days, giving an average of over $17\frac{1}{2}$ miles per diem. When the intense heat of the weather, the rugged, sterile and sandy nature of the district traversed are taken into consideration, this performance, creditable on the smoothest of roads, assumes a magnificent aspect." I further stated under the heading "Sickness on the march to Bannu": "The sick list was almost nil, being chiefly composed of blistered feet." While the regiment was on active service in Waziristan the most arduous duties were performed in a mountainous, rocky, and, at times, almost impassable, country. At the end of the operations we marched into Bannu in British territory with only 16 sick in hospital. My official report stated: "The return march from Bannu was owing to the season of the year of a most trying description (especially as may be imagined for the European officers of the corps), the heat was most intense, the thermometer rarely during the day in the shade of a tent standing under 110° F. and at times even going above 120° F." I am giving the general opinion of officers and men in stating that the regiment on this expedition was subjected to a greater and more continuous strain than it had ever before experienced in any of the many operations it had been engaged in within the past 20 years, and were it not too long to be quoted here, I should like to give the farewell orders in which the thanks of the General Commanding were conveyed to the corps engaged on the breaking up of the column. An expedition, such as I have described, conducted in the months of April, May and June—the hottest season of the year—with little sickness and only four deaths during the entire period from disease, is convincing evidence that an opium-eating regiment is second to none in physique and stamina.

15906. Can you give the number of men in your charge in that expedition?—The strength of the regiment, exclusive of the men left at head-quarters, was 658. They made the march that I have described, from Rawalpindi to Bannu; arriving at Bannu, we left 158 men, and marched as a regiment 500 strong. As regards general appearance and physique, the 14th Sikhs were as fine, robust, and well fed a body of men as any one bearing Her Majesty's uniform. On this point I find I had stated in my report under the head of "Diet": "The regiment is thoroughly well fed, many of the men who have private means or draw good pay are accustomed to supplement the usual flour, ghee and rice diet by the addition of milk, meat, tea, and more particularly rum." This picture of a regiment of habitual opium-eaters was drawn 12 years ago, but it is equally accurate to-day.

15907. Since then you have been acting as Civil Surgeon?—I have subsequently served as Civil Surgeon in the districts of Umballa, Gurdaspur and Ferozepore, all of which contain a large Sikh and opium-eating population. I have also served as Medical Adviser to the Native Chief of a Sikh State, and am thus in a position to say, as the result of an extensive acquaintance with all classes of the population, that I am of deliberate opinion that the moderate consumption of opium exercises a distinctly beneficial influence upon the moral and physical condition of the people. As stimulant, whether in the form of alcohol or as a vegetable alkaloid, such as tea or coffee, opium appears to be an almost universal necessity to all races and in all climates. I am of opinion that the process of natural selection which has induced the use of opium so largely in the East is a salutary one, containing in it much more of good than of evil, and I think it would be a national calamity were alcohol substituted for it. I am aware that a large section of the native population regard the use of all intoxicants in whatever form as evil and abhorrent to their religious ideas, but, even amongst such people, the use of alcohol is viewed as infinitely more pernicious and degrading, both morally and physically, than that of opium. To the mass of our Indian fellow-subjects, then, the fact that a nation universally acknowledged as one of the greatest of sinners in the world, as regards the use of alcohol is holding an enquiry into the, to their mind, much minor moral evils of the use of opium must appear an arbitrary and uncalled for exercise of authority.

15908. What other experience have you had as Civil Surgeon?—I have also acted as Civil Surgeon in a Bengal District, and have been Resident Physician in two Calcutta hospitals and Medical Officer to one of the large Calcutta jails. I have been Governor and Medical Officer of four of our largest and two of our smaller Punjab Jails in various parts of the province. I have therefore an extensive and intimate acquaintance with our criminal population, and, as Civil Surgeon of various districts and Superintendent of the Delhi Asylum, have some acquaintance with the causes productive of lunacy.

15909. What has been the result of your experience?—As regards the production of crime or lunacy, I regard the influence of the habitual consumption of opium as being a factor of extremely minor importance. Considering the numbers addicted to the use of the drug, the opium-eaters are numerically slightly represented in both our jails and asylums. The opium-eater in jails is gentle and amenable to discipline.

15910. What is your opinion with regard to some popular impressions that prevail in reference to opium?—I consider that a most erroneous and exaggerated impression prevails as to the inability of the opium-eater to shake off the habit, and the tortures he is supposed to undergo during the process. It has been extremely rare in my experience that I have ever been compelled to relax the rule enforcing the complete prohibition of opium in prison; and I have found that the opium craving usually subsides naturally within a week or ten days of admission even in the case of inveterate opium-eaters addicted to the use of the drug for a long series of years. I have also found that the illicit possession of opium by prisoners is extremely rare, as compared to the instances of such possession of snuff or tobacco.

15911. You are at present Governor and Medical Officer of a jail in this province?—Yes, I have in the jail, of which I am at present Governor and Medical Officer, some 25 prisoners out of 700 or 800 who confess to having habitually consumed opium, and amongst them there is not one to whom it was necessary to continue the administration of the drug after his admission to jail. I should perhaps qualify this by saying that I found subsequently that two men had been given opium elsewhere, not by me. They had been transferred from other jails, and were given opium for a short period after their admission; but in no instance during the last 18 months I have been in charge of Mooltan Jail have I given opium to any prisoner after his admission.

15912. Except medicinally?—I mean to modify the craving that is felt. Of course medicinally opium is given daily in cases of disease calling for its administration. Opium-eaters have also told me that they themselves and many whom they knew, took the drug only in the winter and discontinued its use in the hot weather. I also regard it as a gross fallacy to imagine that the opium-eater must necessarily convert his use into an abuse of the drug. The usual process is that the dose is increased up to a point, varying in each individual, beyond which he feels no temptation to proceed. In this process he pursues a course followed by all habitual yet moderate consumers of alcohol. The vast majority also of the poorer classes limit their consumption in accordance with their means, just as the users of tobacco and alcohol do; and with extremely moderate consumers their small dose of opium replaces the cup of tea or glass of beer taken under similar conditions by the Englishman.

15913. What experience have you had in regard to the use of opium in malarial districts?—In my experience opium is little used by the people owing to any belief in its direct anti-malarial efficacy. The habit is practically never originated on this account, and when it is started by the medicinal use of the drug, the diseases for which it is taken are usually catarrh and chest affections, chronic diarrhoea and dysentery, or rheumatic and neuralgic pains. In India, however, the malarial element enters into and complicates the course of all these diseases to an enormous extent. It is also largely productive of obscure joint pains and neuralgias attributed by the sufferer to other causes; so it may be said that opium is largely used to cure or palliate many of the results of malaria, though seldom taken avowedly as a direct prophylactic against the disease itself.

15914. What is the belief of the natives in this part of the country in regard to the usefulness of the habitual use of opium?—A general belief exists amongst natives that opium is a valuable restorative when the powers of nature are beginning to abate, as they usually do in the East towards the fortieth year. This impression is, I believe, well founded, and I consider that its action on the nervous system by which the functional activity of the organs is controlled and regulated tends to lessen the wear and tear of the tissues, to check inflammatory states of the system, and thereby acting like oil within a mechanism, prolongs and renders smooth the running of the declining years of life. Its use is therefore beneficial, and its abuse is no more frequent proportionally than that of alcohol, and is infinitely less pernicious in its results, either permanently or temporarily on both mind and body.

15915. What do you think as to the question of prohibition?—I consider the prohibition of the growth and consumption of opium in India to be an absolute impossibility,

Surgn-Maj.
S. Little,
M.D.,
M.R.C.P.
15 Jan. 1894.

Surgn.-Maj. S. Lalale, M.D., M.R.C.P. and that any attempt to carry out so chimerical an idea would be attended by the greatest danger of a popular revolt against the continuance of British rule.

15916. (*Mr. Pease.*) The last witness said that the Sikhs were limited by the Guru to one ratti a day?—All spiritual advisers, Hindu, Sikh and Mahomedan, advise moderation.

15917. Are you aware whether the spiritual advisers of the Sikhs advise them to confine their dose to one ratti a day?—No; certainly not. All spiritual advisers would undoubtedly advocate moderation, that is not peculiar to the Sikhs.

15918. What is your estimate as to the quantity consumed by the soldiers of whom you have spoken in those campaigns?—It varies immensely with the individual. A moderate dose would probably be 4 rattis a day, or 2 rattis; an average dose would probably be 8 grains a day.

15919. That is a much larger estimate than we have heard from the previous witness as to the consumption of the Sikhs: do you feel pretty certain of that?—That would be a fair average. Some men would not take more than a ratti or so, others would exceed it. The amount of opium varies with the individual, but I think a moderate dose would be 3 or 4 rattis a day in the case of an habitual opium-eater.

15920. What do you think would be the proportion of men taking opium in the regiment to which you have alluded in the forced marches from Rawalpindi to Bannu?—I should estimate the proportion at something about 60 per cent. or more.

15921. Did you find that those who did not take opium were in any way inferior to those who did?—No. There was this difference, however, that we were then an old service regiment and the use of opium was almost universal amongst the older men, and under the stimulating influence of opium the old soldier of twenty or more years' service marched with all the vigour of early manhood.

15922. (*Mr. Wilson.*) You have given us several quotations from your reports about these marches and the hardships endured; you did not apparently at that time attach any importance to the opium question, it was not under your notice?—No.

15923. You did not comment on it as one of the elements in the matter at all, or as having any bearing on the subject?—I did not, but my evidence is, I think, all the more valuable as it was recorded twelve years ago without any relation to there being such a thing as the present opium question. The body of my report, however, contains several references to the opium-eating habits of the sepoys, and indicates that I had observed and was fully conversant with the medical aspects of the influence of the drug upon the morale and physique of the regiment.

15924. You say that most of these men were able to supplement their usual rations by the addition of other

things?—Yes. But on service they were restricted to their Government field service rations on the same scale as that supplied to other native regiments.

15925. So that they supplied themselves with a considerable abundance of nutritious food?—Yes, they were a well-fed regiment.

15926. Can you tell us how they were supplied with the opium that they consumed: was it their own private store, or did they get it from the bazaar?—From their own private store.

15927. There was no regimental provision for them?—No; though I believe instances have occurred in which a regiment going on service has been supplied. I was told by a sepoy of the 15th Sikhs that they took opium in their treasure-chest when they went to Egypt.

15928. (*Mr. Mowbray.*) Where does the 4th Bengal Cavalry recruit?—As far as I recollect it is a down-country regiment--the neighbourhood of Delhi. They were chiefly Mahomedans from the North-West.

15929. (*Mr. Fanshawe.*) Have you had any personal experience of the Musbee Sikhs?—Yes.

15930. Would you draw a distinction between the Musbee Sikhs and the Jat Sikhs as to the consumption of opium?—My experience of the Musbee Sikhs was on a very limited scale as a Medical Officer in this station at Umballa. I was only with them about six weeks.

15931. You are not perhaps in a position to express any opinion as to the character of the use of opium between the two classes?—My impression is that the Musbee Sikh consumes much less opium than the Jat Sikh.

15932. The regiment to which you have referred, the 14th Sikhs, was of course a regiment of Jat Sikhs?—Yes.

15933. Do you think that the use of opium amongst them was more generally diffused?—Yes. The Jat Sikh uses more opium than the non-Jat, the Jat being an agriculturist.

15934. (*Sir James Lyall.*) On the other hand, I suppose the Musbee Sikhs drink more than the Jat Sikhs?—As far as I recollect I should think the Jat Sikhs would drink too.

15935. Just as much?—Yes.

15936. (*Sir William Roberts.*) Have you any knowledge as to whether the consumption of opium was prevalent amongst the ancestors of the persons who are in this regiment of Jats—whether it prevailed amongst them from generation to generation?—I believe it has done so.

15937. What evidence have you on that point?—The evidence of the general opinion of the people, the fact that opium consumption is not a modern importation into India.

15938. You have heard it spoken of as a thing that they and their forefathers had done?—Certainly.

The witness withdrew.

SURGEON-MAJOR T. R. MULBONEY, M.D., called in and examined.

Surgn.-Maj. T. R. Mulboney, M.D. 15939. (*Sir William Roberts.*) I believe you are Civil Surgeon at Amritsar?—Yes.

15940. Kindly tell us what your career has been and what opportunities you have had of studying the opium habit in India?—I have been in the Punjab since 1880 in medical charge of different Sikh regiments, the 32nd Musbee Sikhs, 45th Jat Sikhs, The Guides, the 1st and 8th Native Infantry, and the 11th Bengal Lancers. I have been in civil employ in the Punjab since 1883, Professor of Surgery and Ophthalmic Medicine and Surgery, Lahore Medical College, for nearly three years, and Civil Surgeon at Amritsar off and on since 1887.

15941. What has been the nature of your opportunities of studying the opium question as a Civil Surgeon?—Being Civil Surgeon of the station, I am in charge of the whole district.

15942. The dispensaries?—The whole district, inspecting the different villages all over the place and the different dispensaries.

15943. Does that bring you into immediate contact with the people?—More so than any other class.

15944. With all classes?—All classes.

15945. What have you noticed as to the mode of using opium?—There are three modes by which opium is consumed: opium-smoking, opium-eating, and opium-drinking. The class of opium-smokers is very limited. Four years ago the opium-smoking shops were closed by order of the

Government, and since then opium-smoking has apparently decreased; it is confined to a very few, generally a disreputable, debauched and depraved lot.

15946. Did they indulge in other things also?—In alcohol and *bhang*. There is a certain class of old Hindus and Mahomedans who smoke in moderation for the relief of asthma, bronchitis, rheumatism, etc. Smoking has a more soporific and soothing effect rather than a stimulant effect; opium-eating has a more stimulating effect. The soporific effect is not so pronounced unless the quantity taken is large.

15947. What have you observed with regard to the effect of eating opium?—There are two classes who take opium: the habituals who take a dose daily, and the casuals. The habituals form, I should think, about 10 or 12 per cent. of the population.

15948. Adult males?—Adult males. A very small number of these take it in very large doses, from 30 to 60 grains; they are regular drunkards, a depraved lot, generally belonging to the criminal class, thieves, and burglars; we generally meet with them in our jails.

15949. Have you come across opium-eaters amongst respectable people who took very large quantities?—I have, up to 30 grains a day.

15950. I presume you recognize very strongly that there are important individual differences in regard to the tolerance of opium?—Certainly.

15951. Immense?—Yes, it is very difficult to draw a line.

15952. So that what would be an excessive dose for one man would by no means be an excessive dose to another?—Yes.

15953. You recognize that fully?—Yes.

15954. Is opium used as a domestic remedy?—It is the only domestic remedy within the reach of the cultivators.

15955. Would you say that the habit of opium-eating begins very often in that way?—Many of the habituais commence it for disease; those who take from 3 to 5 grains commence it generally for disease. Very often when you meet with these cases, and ask them the reason why they have become habituated to its use, they say; "Life is unbearable to me unless I have a few grains—3 or 5 or 7 or 8 grains—a day; not only does it relieve me, but it enables me to do my work."

15956. I suppose there are a great many who never contract the opium habit?—A great many. The largest portion of the people take it occasionally; the habituais are a very small class.

15957. Only about 10 or 12 per cent.?—Yes.

15958. I presume they become habituais because their constitutions are adapted to the opium habit, like the tobacco habit?—Yes, like tobacco and alcohol.

15959. When once the habit is contracted, do you notice that there is a great difficulty in leaving it off?—I find no difficulty in young men and middle-aged men, but I find great difficulty with very old men who are regularly debauched, not only taking opium but alcohol and other things; in these cases they are very prone to an intractable form of diarrhoea, when the supply of opium is stopped suddenly.

15960. When the opium habit is given up?—Yes, I have never had the slightest difficulty; the men say that for a day or two they feel disinclined to work, but beyond that there is no difficulty in stopping it. In confirmed opium drunkards by gradually reducing the daily dose I seldom fail to cure the habit.

15961. You are now speaking with regard to prisoners in jails?—Yes.

15962. Not even a little diarrhoea for a day or two?—Those are the inveterate cases. They get an intractable form of diarrhoea, when the supply of opium is stopped suddenly, which nothing but a return to the opium habit seems to control; those are the regular opium drunkards.

15963. Have you been able to form an opinion as to the effect of an excessive use of opium quite apart from general depravity and from anything but the opium habit itself; have you seen any effect on any of the functions?—I certainly think it is the most harmless stimulant that one can possibly take in the majority of cases. As I have stated in my report, in the large proportion of cases it is taken as a stimulant, especially in cold weather, when the cultivator has to go out on a cold wet night to watch his crops or to regulate the irrigation of the fields. I think that when opium is taken like that, as the majority of people do take it, it is like a Britisher taking a glass of ale during harvest-time, or like a British matron taking a cup of tea or coffee when travelling during a cold night's journey. I think it is a perfectly harmless stimulant; the effect is slow and prolonged, and there are no depressing after-effects as there are when alcohol is taken.

15964. You are speaking of occasional users?—As it is taken by the majority of the people, as an occasional stimulant, I am not referring to the habitual use of opium for disease. There certainly are a lot of men who take opium habitually, who commence taking it for disease, and who find that it gives them such a stimulus to work that they continue to take it.

15965. Your experience leads you to believe that that form of the habit is a deleterious one?—I have found absolutely no disease, organic or functional, directly or indirectly traceable to the opium habit.

15966. As practised in the places and among the people that have fallen under your observation, do you think that the use of opium is harmful or beneficial on the whole?—Because a few people abuse it I think it is very hard lines that the majority should suffer for it. I do not think it is at all harmful with the majority of people, if taken in moderation.

15967. Taking the advantages and disadvantages and weighing them against each other, do you think from what has fallen under your experience that there has been more harm or good from the use of opium?—More good certainly

ly; I mean among the poorer classes. When people are well clad and provided with every necessary of life, I think there is no object in taking opium. Woollen garments or blankets are unknown to the ryots; it is only in towns that you see them. These poor fellows go out in cotton clothes in bitterly cold weather. Unless they did something to protect themselves against chills, it would be impossible for them to go about their work as they do.

15968. As far as your experience has gone, is the opium habit the cause of crime?—I have never heard of a case. I have been in a great many jails in the province, and I have never seen a single case due to the opium habit. The habit is associated with burglars and men of that class, but I do not think that it has any connection at all with burglary.

15969. There is some opium-drinking in this neighbourhood?—There is, but it is confined to a very few; those are the regular opium drunkards.

15970. You mean drinkers?—No; inveterate opium drunkards, s.t.s. They cannot perhaps get money enough to purchase opium, and they get bruised poppy-heads which can be got anywhere for a few coppers or a handful of wheat, enough to make a strong infusion. It is also largely used as a local application by the poor people for inflammation of the eyes and fomentations.

15971. What is your opinion of the effect of the opium habit in malarial districts?—I think it enables a man to resist cold; it prevents chills, and in that sense it acts as a preventative against malarial fevers, and their sequela.

15972. As a prophylactic?—A prophylactic against fevers and bronchitis, and especially diarrhoea and dysentery.

15973. You regard the opium habit as somewhat protective against dysentery and diarrhoea in malarious districts?—Yes, certainly; they one and all affirm that.

15974. Is there a popular opinion in malarial districts that opium is useful to them?—I know that in the Amritsar district, which is essentially malarial, it is the prevailing, the universal opinion.

15975. It was so when you first came into the district, as far as you knew?—I was never in such a malarious district before.

15976. I think you have been there since 1887?—Yes, I mean other districts not so essentially malarial as Amritsar.

15977. You had found the opinion prevailing that it was a protective in other malarial districts?—Yes, in the Nabha State; I cannot speak of others.

15978. (*Mr. Pease.*) You mention that you had served in various Sikh regiments, and you referred to the 32nd Musbees and the Guides; are they all Sikhs?—The Guides are a mixed regiment; they contain Gurkhas, Punjabis, Mahomedans and Sikhs.

15979. In the Bengal Native Infantry how does the practice compare with the other regiments? Is the consumption larger or smaller?—When I first came out, I had those regiments for three years. I certainly had not formed any definite opinion about the opium habit when I was with them. It is only since I have been in civil employ, where I have come more into contact with the people and know more about them, that I have been able to form a definite opinion. I know that in the regiments the habit prevails, especially among the Sikhs. They often used to ascribe attacks of bronchitis or fever to their not having taken a pill of opium when going on sentry duty at night.

15980. Is there a larger consumption amongst the Musbees than amongst the Jats, for instance?—I was the longest with the 32nd Pioneers. I had not noticed that they took opium so largely as the Jats. It was not brought home to me so much in the 45th Sikhs; I was not long enough with them to say whether the habit prevailed to any marked extent.

15981. (*Mr. Wilson.*) What is the most malarious district of which you had experience?—Amritsar.

15982. When was your attention first directed to the advantages of opium as a prophylactic?—In 1887, when I first came here. The fact was brought home to me in the army. But it is difficult to form an opinion of what you hear. It is only after years of experience and watching the effect of the opium habit in malarious districts that one can form an opinion.

15983. Have you information from anybody else of that kind?—I had often heard of the use of opium in manufac-

Surg.-Maj.
T. R. Mul-
roncy, M.D.
15 Jan. 1894.

Surgn.-Maj. T. R. Money, M.D. during towns at home where the habit was carried to an alarming extent, and I came out to India prejudiced against opium, viz: *Chundup edd* has a

15 Jan. 1894. 15984. I suppose you have a private practice?—I have. I may mention that I have had an extensive surgical experience in the Punjab, especially eye surgery and cases of calculus, and I find that the opium habit is absolutely no bar to an operation. In fact they will take chloroform more kindly and with less risk and run a better chance of successful result than non-consumers. So much so that I give opium freely to non-consumers on whom I operate.

15985. Prior to operations?—Yes, immediately before giving chloroform, and during the course of after treatment.

15986. I am speaking of persons not suffering from anything in particular; have you advised them to take opium in malarious districts as a prophylactic against fever?—A man never comes to one for advice unless there is something wrong with him.

15987. (*Mr. Mowbray.*) I understand that you have had experience among Jat Sikhs and Mushee Sikhs?—Yes.

15988. Do you think there is more consumption of opium among the one than the other?—Yes; there is a larger consumption among the Jats than among the Mushees.

15989. In your private practice are most of your patients Europeans or Natives?—Almost wholly natives.

15990. (*Mr. Horidas Veharidas.*) You say it is difficult to draw a line between a moderate and an immoderate dose of opium?—I mean the effect on different people.

15991. You mean that what would be harmful in some men, would not be harmful in others?—Yes; I know no harm due to the opium habit except in cases of opium drunkards. I know of no disease directly or indirectly traceable to the opium habit.

15992. You refer to opium-drinkers more than to opium-eaters?—Opium-drinkers are generally very thin and weakly, but in these cases it is a slow process of starvation due to the opium habit enabling them to live for a longer period

The witness withdrew.

Bhai Arjan Singh.

BHAI ARJAN SINGH called in and examined.

16002. (*Sir James Lyall.*) How long have you served and what positions have you occupied?—I have served as an Extra Assistant Commissioner and Excise Officer in the Rohtak, Umballa and Pora Ghazi Khan districts.

16003. And as Extra Assistant Commissioner, have you been brought into very close contact with the people in the villages?—Yes, as well as with the higher classes.

16004. As far as your experience goes, what classes of the people are the chief consumers of opium in the Punjab?—I think that so far as the Punjab is concerned, the Sikhs are the largest consumers of opium; the central districts of the Punjab as well as Umballa, where the Sikhs reside in large numbers, being noted for their large consumption of this drug. Leaving aside the Sikhs, the Hindus are more inclined to the use of opium than the Mahomedans.

16005. You have been a Magistrate also?—Yes.

16006. Have you seen any connection between the use of opium and the commission of crime?—No connection at all, except as regards those offences which concern the Opium Act; and of course there the opium-eaters are the defendants.

16007. What physical effect is produced by the use of opium?—A moderate quantity in my opinion does not do any harm. It is by the excessive use that great harm is done. People with whom I have been brought in contact are generally moderate eaters only, with the exception of the jagirdars of the Umballa district, many of whom are inclined to indulge too much in the use of opium. This tendency towards excess, however, is not attributable to anything in opium itself. They have little work to do, and persons having nothing to do will take some stimulant to idle away the time.

16008. What are jagirdars?—They are assignees of the land revenue.

16009. Do you think that if opium were prohibited they would take to other stimulants?—I am certain of it. Opium-smoking is very injurious even in moderation. In 1889 I had to write a note on the subject in connection with the *chandu* shops existing at Umballa. The closure of these

with a smaller quantity of food than they could otherwise do with.

15993. Do you mean that they purposely take less food, or that they cannot afford it?—It is difficult to say. I do not think they cannot afford it, but from the fact of their eating opium and getting into that soddened state, they do not take their food.

15994. They have not sufficient appetite to digest more food?—I suppose they derive a greater stimulation from the opium than they do from their food.

15995. If they take rich food opium does not do them harm, but if they cannot get a quantity of good food, it does them harm?—Opium does not do harm; it is the absence of food that does the harm. They get under the influence of opium, and they have no desire to eat.

15996. That is your impression?—Yes.

15997. (*Mr. Fanshawe.*) I understand you to say that the belief in opium as a preventive against fever or against malaria was common amongst the people in the Amritsar District?—It was universal.

15998. We have been told by some witnesses that the belief in opium as a prophylactic is a new doctrine, but you do not agree with that; in 1887 and in subsequent years you found it a prevalent belief amongst the people themselves?—Yes.

15999. You are quite clear about that?—Yes. I am afraid the question has got mixed up. They mix up the attack of fever with a predisposition to an attack of fever; there is no doubt it protects the system against the attack—that is the universal belief.

16000. I am asking you as to the prevalent belief?—It does indirectly protect them inasmuch as it prevents a man running the risk, when going out on a cold night, of catching chill; chill is an exciting cause of fever; anything which lowers the system predisposes to an attack of malarial fever; that is how opium acts as a prophylactic.

16001. So far, therefore, you think that the belief has some justification, the opium acting as a preventive against chills which may lead to malaria?—Yes.

shops was expected to be attended with loss of Rs. 3,000 per annum, but the Government sanctioned the recommendation to close them in view of the harm that was being done by them. Now there is no shop in the Punjab for the sale of *chandu*. Consumers, however, are not prohibited from manufacturing *chandu* on their own account. Indulgence in this stuff is painted on one's face, and the individual addicted to it is a wreck physically as well as morally.

16010. You have noticed I suppose the habit of *chandu*-smoking at Umballa?—Yes.

16011. Has it come under your observation at any other places?—No.

16012. What are the classes of people who smoke *chandu*?—They are generally persons addicted to the commission of crime; they do not belong to any particular classes. At first they were those who come from India proper into the Punjab, but now their example has been copied by others. *Chandu*-smoking and the commission of crime are looked upon as almost identical. I do not say which is cause and which is effect; but I think they are closely associated with each other. The two things act and react on each other. I think in the first instance that it is the opium-smoking that deteriorates a person's morals.

16013. Are they mostly Mahomedans or Hindus?—I think in equal proportions.

16014. They are mostly people otherwise debauched?—Yes.

16015. These *chandu* shops, I suppose, were thought to be very disreputable places?—Yes.

16016. No respectable person would go into them?—No.

16017. If you have a place like that in which no respectable person will go, and where debauched characters collect, would you not rather hesitate to say whether the character of the people who go there is due to the smoking, or whether it is not due to the bad character of the place?—I think that when a person begins to take in smoking opium, he soon becomes a bad character; I think it must be due, to some extent at least, to opium-smoking.

16018. What is your general opinion as regards the use of opium in the case of old persons?—The people regard the use of opium as beneficial for aged persons, the general belief being that its use in old age imparts strength and vitality to the human frame. Persons apt to suffer from colds and coughs are believed to derive great benefit from an habitual use of opium in small quantities. Speaking generally, the use of opium, even when in excess, is looked upon more favourably than that of alcohol.

16019. Supposing opium to be prohibited, and supposing it to be necessary to put on some additional tax in order to meet the loss of revenue, do you think that that would have much effect upon the minds of the people?—They would be seriously discontented, and I think it would bring grave danger to the Government. It involves six crores of revenue.

16020. Do you know anything of places where they cultivate opium?—In the Amritsar district and in many of the Kalsia villages; it is a very paying industry in Umballa, and I think that no other crops could take its place which would be as profitable as opium, which generally gives Rs. 80, Rs. 90 or Rs. 100 per acre; whereas any other crop that could be substituted would hardly yield Rs. 40.

16021. What classes of people cultivate opium in the Amritsar district?—Sainis and Malis, whose holdings are very small. The population is increasing, and they have to live on small holdings; but the cultivation of poppy enables them to eke out a livelihood.

16022. Do the women and children assist?—Yes.

16023. Is the opium produced in Kalsia State consumed in the State?—Partly, and it is partly brought into this district. The villages are interspersed with the villages of this district, and some of the opium of this district goes into that.

16024. What is your general opinion in regard to the question whether opium should be prohibited except for medical purposes?—Even if it be admitted for the sake of argument that the use of opium is somewhat harmful, it is not every harmful thing that Government can undertake to prohibit. So far as the people of India are concerned, the harm involved in the use of opium must be shown to be serious before they would realize the justice of the proposed prohibition. Under the present circumstances, discontent at being deprived of what is considered by many to be a useful drug and at being required to pay heavy additional taxes in return for this prohibition, would be general and widespread. Add to this the oppression that would be committed in the name of the suppression of the opium traffic by petty officials employed on the preventive establishment, and picture the inquisitorial proceedings started to trace a grain of opium, while thousands of persons must necessarily be registered and permitted for a period to possess opium in much larger quantities, and the unwisdom of prohibiting the cultivation of poppy and in the manufacture and sale of opium would be manifest. I have been talking to my friends, and they think that Government will begin to say that people should not eat potatoes or wheat, or this or that. Even if a thing is harmful, unless it is very harmful, Government has no justification for interfering with the liberty of the people.

16025. I suppose there are a certain number of people, religious Hindus and Mussalmans, who think that every kind of stimulant is a bad thing, and would like to prohibit opium?—Among the Sikhs it is not considered so disreputable. I think, so far as religious sentiment is concerned, it is directed chiefly against alcohol, very little against opium. As far as I can remember, there is not a text in any scripture saying anything against opium, except that every stimulant is condemned generally; but in that case tobacco was condemned equally with opium.

16026. (*Mr. Pease*.) Do the religious teachers of the Sikhs give any advice on the subject of taking opium?—Neither for nor against.

16027. (*Mr. Wilson*.) You state that there is no shop in the Punjab for the sale of *chandu*—you mean no licensed shop?—No licensed shop; if there is a private shop without the notice of the authorities, of course that is a different thing. Every attempt is being made to unearth these shops.

16028. You think there are unlicensed and illicit shops?—Yes. But I would not call them shops unless a person sells to a number of people. If a person sells only to two or three, I should not call it a shop.

16029. Do you think that there are places in the Punjab where *chandu* is illegally sold?—Certainly, but in a very small quantity and to a very small number of persons.

During the last year at Dera Ghazi Khan I traced a number of persons who had been getting *chandu* illegally. The number was only four or five, and the quantity only a few tolas. *Bhai Arjun Singh.*
15 Jan. 1894.

16030. What is your view on the subject of additional taxation?—The people would object very strongly to the additional taxation that would have to be imposed to carry out the suggested prohibitive measures.

16031. What additional taxation do you refer to?—There is a loss of six crores of revenue, and compensation would have to be paid to Native States as well as, I think, to cultivators who have been earning their bread by these means for centuries, at least for long terms of years.

16032. Are you aware that those persons in England who are in favour of the prohibition of the opium trade have never proposed that there should be additional taxation in India, but that England should pay the difference?—Yes, I am aware of that; at the same time I am aware that in all such proposals which aim at two things—first, the destruction of a certain monopoly, and then a certain tax—it is generally the one portion that is accepted in England, and the other that is left to be borne by us as best we can.

16033. Are you also aware that Lord Kimberley, the Secretary of State, has expressed his opinion that England would never consent to pay for that loss of revenue?—Yes.

16034. Therefore, do you not see that if no body proposes that it should be done unless England did pay, and if Lord Kimberley is right in believing that England will never pay, there will not be any prohibition?—I do not see the justice of that argument. You propose that prohibition is only to take place provided the English people pay compensation on account of the loss of revenue; at the same time it is possible that a certain portion of your proposal may be accepted and the other discarded. We, as possible sufferers, have to take both into consideration.

16035. You think it might be likely that somebody in England would propose that India should bear a burden, which those who are in favour of prohibition do not want India to bear?—Yes. I believe it.

16036. In reference to Kalsia you state transit goes on, subject to certain formalities being observed: will you tell us briefly about those formalities?—The issue of licences. At present I do not think they are observed. The rules require that when a Native State has to take opium from one part of India through British territory, it should, like all individuals, obtain a licence, permit or pass; but as the Kalsia villages lie interspersed with the villages of the Amritsar district, I noticed when I was Excise Officer that those formalities were not being observed. The district officer might insist upon their being observed, and that is why I used the words.

16037. At present there are no formalities?—No. The rules require them, but as one village lies here and another there, and British territory intervenes, sometimes these formalities are not observed.

16038. Without these formalities there is no difficulty in introducing opium from these places into British territory?—No. The villages lie close to each other. Were British territory 20 or 30 miles away, no one would attempt it; but these Kalsia villages are very close to each other.

16039. You have referred to the inquisitorial proceedings that might be adopted to trace illicit opium?—Yes.

16040. Are they not now proceeding to trace illicit opium, and, if so, in what respect would they be more inquisitorial than they are at present?—At present one can possess three tolas. If an enemy wishes to harass another person he must trace at least three tolas before he can go to the police and start proceedings. If this quantity were diminished, there would be a likelihood of an increase of this kind of trouble. At present one has to trace opium in another man's house before he can go and give information to the police, but when the use of opium is entirely prohibited, it will be sufficient for a man to go to the police and say that I was eating opium. At present no such inquisitorial proceedings are possible. At least the possession of three tolas must be traced to my house before I can be convicted or taken up by the police. But if there were entire prohibition, the tracing of the smallest quantity would be sufficient, on the evidence of two witnesses or one witness, to hand him over to the police. I think that would be an undue interference with the liberty of the people.

16041. Would you give me some idea of how much is three tolas?—It is little more than half a chattak, or about the size of this inkstand that I hold in my hand.

Bhai Arjan Singh. 16042. Will you explain to me distinctly what profits on the cultivation of opium are?—My idea is that if the cultivator pays proper attention to his crop, he earns between Rs. 80 and Rs. 160 per acre.

15 Jan. 1894. 16043. What do you think it costs him to cultivate that?—I think it costs him about Rs. 20.

16044. How many seers of opium would he have to get to bring in such a sum as you state?—The average was, when I was in the district, about 8 seers per acre; sometimes it is 10 seers, and sometimes 7 or 8. Then there are the seeds, about 2 maunds per acre.

16045. Will you tell me in which Opium Agencies they pay Rs. 8 per seer?—There is no Opium Agency in Rajputana. It is entirely left to the cultivators.

16046. Is the cultivation free?—It is free cultivation subject to the payment of the tax of from Rs. 2 to Rs 8, varying in different districts of the Punjab.

16047. A man may cultivate eight seers worth of opium, but he may only have three tolas in his possession?—A cultivator has to account for his proceeds.

16048. (*Mr. Mowbray.*) I think you told us that there were places where *chandu* was sold illegally?—Yes. I mentioned some cases only last year in Dera Ghazi Khan.

16049. Were there any prosecutions?—Yes, and the people were punished.

16050. For the offence of selling?—Selling without license.

16051. There is no license required for the manufacture of *chandu*?—No. Anybody can manufacture it.

16052. It was the selling that was illegal?—Yes.

16053. (*Mr. Haridas Vekharidas.*) By the closing of the *chandu* shops in Amritsar and Dera Ghazi Khan, do you think that the use of *chandu* has decreased?—I think considerably. I mentioned it in the last Annual Report. While the shops were opened a number of persons not addicted to its use were induced to go there, whereas now only those addicted in former years, and who are not brave enough to make it themselves, commit this offence. I think the number has been reduced.

16054. By closing the shops there is no inducement offered?—The inducement has been considerably decreased.

16055. Generally all classes use opium, I suppose?—Yes.

16056. Are there cultivators among the Sikhs?—Yes.

16057. Are there many women who take opium?—I do not know of any women; I should think the proportion would be next to *nil*.

16058. You think that in poppy cultivation they do not require the use of opium while working in the fields?—No, I think not.

The witness withdrew.

Rai Faiz Talab Khan.

RAI FAIZ TALAB KHAN called in and examined (through an interpreter).

16059. (*Sir James Lyall.*) I believe you are Honorary Magistrate and Member of the District Board and Municipality at Raikot, Ludhiana?—Yes.

16060. You are the head of a very ancient family?—Yes.

16061. Who formerly had a sort of territory of their own?—Yes.

16062. In your part of the country are the majority of the villagers Sikhs or what?—The majority are Sikhs or Rajputs.

16063. Are some Gujars?—Yes.

16064. Do they all use opium?—Yes, frequently.

16065. Are the Rajputs and Gujars all Mahomedans?—All.

16066. Do they use opium as much as the Sikhs, or less?—As much as the Sikhs. They are all converts; they were formerly of the same tribe.

16067. How many of the adult males of all these classes use opium?—About 25 percent. of the adult male population.

16068. Is it the custom to give opium to children?—It is.

16069. From what age?—When the child is about a month to 2½ years.

16070. What is your opinion as to the effects of taking opium?—It has no injurious effects.

16071. You are speaking of the moderate use?—The moderate use only. The excessive use even of food would do harm.

16072. Do you think it has some benefit?—Yes, for catarrh, diseases of the eye, colds and every other ailment due to a moist climate. It refreshes a man when he is tired.

16073. I suppose some take it in excess in your country?—I have not particularly noticed that. I have seen very

few persons who take more than agrees with their constitution.

16074. What would be the general feeling if Government were to prohibit the use of opium except for medical purposes?—They would feel it a serious hardship.

16075. If, in addition to that, there was a loss of revenue, and some extra taxation had to be imposed, what would be the result?—The people will have to submit, but they will be discontented or displeased.

16076. Do you think that the use of opium is forbidden by any religion?—The stigma that naturally attaches to every intoxicant is applicable to opium; it is nothing in particular. Nobody would confess in public, especially speaking among Indians, that he takes any stimulant, and, so far as that stigma is concerned, opium is no exception to it; but there is no special prohibition against it in any religion.

16077. Would they be unwilling to confess to taking alcohol?—Their unwillingness extends to alcohol.

16078. Are there large number of recruits from your district?—Large numbers.

16079. What would they think of the prohibition of opium?—They would be very unhappy.

16080. (*Mr. Pease.*) Are the recruits in the habit of taking opium when they enter the army?—No, at the time they enter they do not take it, but they take it subsequently. From enquiries that have been made from pensioned officers it appears that they consider it to be necessary, as they have to wander about in different climates and in different parts of the world.

16081. (*Mr. Mowbray.*) Is there any religious limit to the amount that may be taken?—There is no limit.

16082. (*Mr. Fanshawe.*) Do the people in your part of the country begin to take opium after they are young men?—After they are 40 years old.

16083. It is a common practice to begin after 40?—Yes.

The witness withdrew.

Adjourned to to-morrow at 10-30.

At the Old Mess House, Umballa.

FORTY-SEVENTH DAY.

Tuesday, 16th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
 „ ARTHUR PEASE.
 „ HARIDAS VEHARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

Miss M. ROSE GREENFIELD called in and examined.

16084. (*Mr. Pease*.) You are, I believe, a Superintendent of the Zenana Mission and the Charlotte Hospital and Dispensary for Women?—I am, in Ludhiana.

16085. What classes of women have you in that hospital?—We meet with all classes of women there.

16086. Various races?—Yes, we have a great variety of nationalities—women and children of all classes, and the various races in Ludhiana—Kabulis, Kashmiris, Punjabis, etc.

16087. How many years' experience have you had in India?—Eighteen.

16088. How far is opium-eating or drinking prevalent among these classes?—Opium-eating is common amongst women after middle age, especially amongst the Kabulis. The giving of opium to babies and young children is extremely common, especially amongst the poorer classes.

16089. What do you know about opium-smoking?—I know nothing of opium-smoking.

16090. What is the result of the habit of taking opium physically, mentally, and morally?—The results of the habit in women physically is injurious, in so far as that opium upsets the digestion, interferes with nutrition, and I find that patients who are in the habit of taking it regularly are not benefited by it as a medicine. The mental development of the women of India is so neglected that an abnormal stupidity on the part of the opium-eater might be accounted for on other grounds. The same may be said of the moral effects.

16091. Do you consider opium as a protective against fever?—In all my experience I have never heard of opium being taken as a protective against fever. I believe that in our district that experiment has yet to be tried and is not likely to be so, as the people are becoming familiar with the use of quinine or arsenic or iron, which are safe prophylactics.

16092. Do you consider it necessary for the purpose of enabling women to do their work?—I have not found women taking it on that ground. They usually begin to take it for some painful disease, or cough, or because their eyesight is failing, and the use of opium is supposed to be beneficial. Working women give it to their children to keep them quiet, saving the trouble of nursing and amusing them.

16093. Is the habit looked upon as disgraceful?—Most habitual opium-eaters regret the formation of the habit, and very few justify it on the ground that it gives any real relief to the symptoms for which they began to take it. On the other hand, they do not conceal the fact with few exceptions.

16094. Have you any suggestions to make as to the alteration of the law?—I should be in favour of putting some restrictions on the sale of opium for other than medical purposes for the following reasons: (1) The great ease with which it can be obtained by the general public makes it a very favourite poison. Women wishing to commit suicide or to get rid of their girls (not being allowed to strangle them at their birth) can easily effect their purpose under the guise of an accidental overdose, and that this is the common practice is a matter of general assent.

16095. Has it been common in the past for women to strangle the girls in that way?—Formerly.

16096. Can you give us any information on that point?—We visit a village about 5 miles from Ludhiana where, up to within I may say 20 years ago, hardly any girls were allowed to live. The people themselves say that “the girls have begun to grow up in the village since you began visiting us.” As a matter of fact, when we first began going to that village to teach the people there were very few girls. (2) The second reason why I am in favour of restriction is that many children's lives are lost just by an overdose of opium and nutrition is seriously affected and the children's constitutions undermined by the persistent use of it. (3) Thirdly, the very fact of opium sales being restricted would draw the attention of the native public to the question, and the discussion might tend to develop a general feeling of disapprobation as regards giving opium to children. After all it is only the growth of intelligence and right public opinion that will by degrees correct these malpractices.

16097. Have you any other general points on which you would like to give evidence?—I should like to suggest that the adulterations to which opium is liable should form a very serious subject for enquiry. Undoubtedly the adulteration of the drug is a very important element in the frequent cases of accidental poisoning. Even habitual consumers may occasionally get their accustomed dose in a purer preparation than usual and be overcome by it.

16098. What is the average number in your hospital, or who attend the dispensary?—We see between 10 and 12,000 patients a year.

16099. At the dispensary?—At the dispensary and in the hospital. We have 25 beds and an average of 15 in-patients.

16100. (*Mr. Wilson*.) Do you do any zenana work as well as visiting these villages?—Yes, we have several zenana visitors in the city.

16101. Do you know anything about opium in zenanas yourself?—We visit the same classes in the zenanas as those who attend our dispensary, so that our experience is one in that matter.

16102. Have you anything to tell us about the effect of opium on the troops; I believe you have had various kinds of young Sikhs in your class?—I know nothing of the effect of opium on the troops, but our young boys that are drafted into the Sikh Regiments tell me they get rum for their rations, and it seems rather inconsistent that their fathers should be prevented from eating opium when the young soldiers are taught to drink rum. I have one boy who has been for five years in the Army and has now come out on the Reserve. He promised me when he went he would not take rum, and he told me that for some time he did not have it, but he took it afterwards, and I am afraid he will go on drinking country spirit now he has commenced.

16103. How long has this boy been under your influence in your classes?—We had him for about eight years.

16104. You thought well of him?—Yes.

16105. Did I understand you that rum is given out to young Sikhs?—Yes, the boys tell me so.

Miss M.
 Greenfield.

16 Jan. 1894.

Miss M. Greenfield. 16106. Is it not directly against their religion?—They look upon it as forbidden. I do not know whether rightly or wrongly, but the Sikhs look upon it as forbidden by their religion. Whether there is actually anything in their religious book to forbid it I do not know, but both alcohol and tobacco are considered as forbidden.

16 Jan. 1894.

16107. (*Mr. Wilson.*) Do you mean to say that your impression is that immediately they join the regiment the principles on which their people have brought them up are subjected to a sort of trial?—Yes.

16108. As regards liquor?—Yes.

16109. (*Mr. Mowbray.*) Are your experiences in the dispensary with women only?—Women and children.

16110. Could you give us any percentage of women who are injured by the opium habit?—I have not given any percentage, but if I had been in possession of these questions earlier I might have collected some statistics as to that. I only got the questions yesterday when I came over here; therefore I have had no opportunity of making enquiries as to statistics.

16111. You said you thought there should be some restrictions on the sale of opium; of course you are aware that there are some restrictions, in the sense that it can only be sold by licensed persons?—I know that, but there is no difficulty in obtaining it.

16112. From a licensed person?—From a licensed person.

16113. You understand the sale is not unrestricted altogether?—That I know.

16114. (*Mr. Haridas Voharidas.*) If the use of opium were put a stop to, except for medical purposes, do you think people would take alcohol more than they do now?—I cannot say; the spread of the drinking habit is very terrible even now; the increase in the drinking of liquor is very considerable both in the city and in the district.

16115. Would it not spread more widely if the use of opium were put a stop to altogether except for medical purposes?—It might.

16116. (*Mr. Fanshawe.*) I understand you to say that opium is not uncommonly used as a domestic remedy among a number of the people of the country?—Yes.

16117. Do you mean by women?—Yes.

16118. (*Sir James Lyall.*) You say that you never heard of opium being taken as a protective against fever? Is Ludhiana on the Sutlej?—Yes.

16119. I remember about 20 years ago when I was travelling and encamping in Ferozepore on the Sutlej about 20 miles below Ludhiana, I was followed by a crowd of Sikhs, about 40 or 50 men, who complained that the opium sold by the Government monopolists was very bad and very dear. I said to them "what necessity is there for taking opium at all; it is a bad thing, is it not?" They said, "we could not live in this country," that is, in the low lands near the Sutlej, "without opium, the fever would kill us if we did not take opium." Do not you think that, though opium may not be a prophylactic in any sense against fever, yet the habit of taking small doses of opium may be a kind of resistant against chills, and therefore against fever?—I do not think so. I have never come across anyone in our dispensary or hospital who has taken opium for that purpose. On the contrary, I should say that a person who was constantly in the habit of taking opium would not derive the benefit from an occasional dose that might possibly be experienced by any one who was not in the habit of taking it.

16120. No, but my experience was that they thought fevers came from the chills that prevailed in these damp countries?—Ludhiana is a very malarious place; we have great visitations of fever there.

16121. So is that country lower down on the banks of the river in Ferozepore?—Perhaps at the time you are speaking of people did not know the use of quinine.

16122. I do not attempt to say that opium is a prophylactic in the sense that quinine is. I am only talking of the general opinion of the natives, and my impression was that they thought that the opium habit, that is to say the habit of taking small doses of opium, was a protective against chills, which they are particularly liable to in that country, and therefore that it was a protective against fever?—Do not you think they wanted to give you a good reason for taking it?

16123. No, it was a thing that was shouted out by the whole crowd; nobody had suggested it before?—I have

never come across it; I have visited a great deal in Ludhiana and moved about in camp among the villages.

16124. Is it not peculiar that the same idea prevails in England in the Fen districts? In the Fen districts in England the habit of taking opium was just as bad as it is in any part of India, while the ague in those districts lasted. Does not that seem to suggest that the idea very likely is not a new one in India too?—It is very strange I should never have come across it.

16125. I suppose that nobody would be more ready to say than a native that opium would not be a good medicine for fever. I suppose they think fever a hot disease, do they not?—Yes.

16126. And I suppose they think opium a hot medicine?—Certainly.

16127. And they do not apply hot medicines to hot diseases?—Yes, they take tea, which is also a hot medicine according to their idea.

16128. Their general idea is that a cold medicine should be taken for a hot disease and *vice versa*?—Yes.

16129. I mean to say I quite agree with you that if you asked a native whether opium is a good medicine for fever he would say quite the contrary, but if you asked him whether it was a good thing to prevent chills thereby, making a man's constitution resistant to fever, I think he would take the other view?—Would you take the responsibility of suggesting the idea?

16130. I am merely suggesting the question whether the belief has existed in the country or not. You have not heard that such an idea as that is prevalent in the country?—I do not know anything of such an idea amongst our population.

16131. (*Chairman.*) You spoke very strongly on the evils done by alcohol?—Yes.

16132. Do you think there should be restrictions placed upon that as well as upon opium, restrictions upon its use excepting for medical purposes?—To begin in India or at home?

16133. To begin in India: do you think it is equally necessary in India?—I should think it is extremely necessary in India, because the people have so little self-restraint, so little moral courage, that if once they yield to a habit of that kind there is nothing to stop them.

16134. You think it desirable, if practicable, to restrain the use of alcohol, that it should only be used here for a medical purpose?—I do not see how you can begin to do that here if you do not do it in England.

16135. Which of the two do you consider the greater evil in this country, the use of opium or the indulgence in alcohol?—At present I should say that there is more loss of life through the use of opium, because the use of it, especially amongst young children, is so frequently fatal; but I should consider the dangers in the future are greater in regard to alcohol.

16136. I gather from what you said that you would be inclined to admit that it was only the growth of a healthy public opinion with regard to these matters that would put an end to the malpractices which you have described?—Certainly.

16137. However desirable it might be to impose restrictions by an act of the Government, it is always more healthy to work on public opinion?—Yes, whatever restrictions you place upon them they will evade if they choose.

16138. Quite so. Therefore, unless the restrictions are supported by a moral sense and a healthy public opinion they might be evaded?—Quite so.

16139. (*Sir William Roberts.*) I understand that you have medical charge of the Charlotte Hospital and Dispensary for Women?—We have a Lady Doctor in charge; I am only responsible for the general superintendence of the Mission.

16140. You have not a medical diploma yourself?—No, I have been working in medicine for the past eighteen years, but I only took a nurse's training. I was forced into doing medical work by the great necessity which we had for it.

16141. You have not received a medical education?—No.

16142. There is a very important point here about the use of opium by mothers for their children; have you yourself come across accidents?—Several accidents. In this very village I have been speaking about there was a fine little boy of five years of age who was in the habit of getting a small dose of opium, and his mother on one occasion gave him too much and the child went to sleep at the door of the house and they found him dead after some hours.

16143. I suppose there is some such thing as a Coroner's inquest in India?—I think there is some such thing.

(*Sir James Lyall.*) There is an enquiry held.

16144. (*Sir William Roberts.*) Was there an enquiry held in that case?—I do not think so.

16145. Have you known of inquests being held in cases of children who are supposed to have taken an overdose of opium?—No.

16146. So that you speak rather in the way of a general impression I suppose?—I speak from information got from the women themselves who come and talk to us freely as we go about in the villages, and they tell us that this is the easiest way of getting rid of the little girls.

16147. And is it the case that the mothers in your part of the country are capable of doing that sort of thing?—Quite. Not only the mothers, frequently it is not the mother's wish, but its father insists on the girl child being killed because they do not want the expense of the wedding.

16148. Have there been any criminal prosecutions in regard to cases of that sort that you know?—Not in Ludhiana to my recollection, but I have seen women in prison who have been in prison for it.

16149. On suspicion?—No, as punishment for that offence.

16150. I suppose you really mean accidents occurring in connection with children at an early age. It has come before us several times that opium is given to infants by their mothers to preserve them from cold or to keep them quiet. I think you said you have observed or known of accidents occurring under these circumstances?—Yes, I have known of accidents, and I have seen several babies who have been kept in a constant state of emaciation by this opium habit.

The witness withdrew.

Miss CARLTON called in and examined.

16160. (*Mr. Pease.*) You are a Medical Missionary in Umballa?—In Umballa City.

16161. What is your qualification?—I am an M.D. of the Woman's Medical College of Philadelphia, U.S.

16162. Do you confirm the evidence which has just been given?—Yes, so far as my experience for seven years goes.

16163. Have you anything generally that you would like to add to the evidence that she has given?—I know that it is the universal practice in the city for mothers to give opium to their little children until they are 2½ or 3½ years old.

16164. Have you any reason to suppose that it is used in Umballa for the purpose of destroying them?—Yes, I know of one mother who destroyed seven children, but not all of them by means of opium.

16165. Some of them by means of opium?—Yes.

16166. In your visits in Umballa have you found the diseases of children aggravated by taking opium?—The diseases among children are much aggravated by the practice of taking opium.

16167. (*Mr. Wilson.*) With regard to the special point of opium as a prophylactic against fever, have you anything to say with regard to that?—I have not found it so.

16168. In the course of your medical studies were you

The witness withdrew.

The RANA DALIP SINGH of BAGHAT called in and examined (through an interpreter).

16175. (*Sir James Lyall.*) You are Ruling Chief of Baghat, are you not?—Yes.

16176. Is it a small State in the hills?—Yes.

16177. What is the population of the State?—15,500.

16178. You are a Rajput I believe?—Yes.

16179. In your own State and the surrounding States is the use of opium general, or is it confined to any special race?—It is general.

16180. What percentage of the people, grown up men, are opium-eaters?—From 18 years of age about 30 per cent.

16181. How much do they consume?—From 2 to 45 grains.

16182. What do the people of the plains use?—The people of the plains living in the State use *mudak* and *chandru*.

16151. Who are otherwise free from disease?—Yes, as soon as they were weaned from the opium they began to put on flesh and recover.

16152. So that on the whole you think that the practice which is prevalent in India of giving opium to infants is an injurious one?—Decidedly.

16153. (*Mr. Wilson.*) I do not know whether you have been all those 18 years in your present position?—Yes.

16154. In the same place?—Yes.

16155. You spoke of quinine; is quinine sold at the Post Office?—I do not know. We of course give away quinine freely, and we get help from the Government to distribute it during the fever season, and I have known of it being given in the villages to the *lumbardars* to distribute it when fever is raging. The people all know of it well now.

16156. You do not know whether it is sold at the Post Office?—I do not.

16157. Do I clearly understand that in your opinion a certain number of girls are still killed by means of opium intentionally?—I have no doubt of it.

16158. Do I understand that some years ago it was a recognised fact that it was not an uncommon practice for women to strangle infants?—Yes, it was constantly and frequently done. They will destroy them at their birth in some way, or put them aside and neglect them. We have seen a little baby girl with a handkerchief put round its neck and then left on a stool to die.

16159. What you refer to is really the remains, the lingering of this ancient practice?—Yes.

ever taught that opium was a valuable prophylactic against fever?—No.

16169. (*Mr. Mowbray.*) What other means do they use for infanticide besides opium?—In one of these cases a mother gave an Indian medicine which caused disease of the bowels. She did not want suspicion to be cast on her, so she gave this medicine which caused an irritating disease. The mother told me of the gradual death of the child. Two of the children were treated in this way.

16170. Was that medicine got from a native doctor?—Yes, from some *Hakim*.

16171. I suppose they are never strangled now?—I do not know about strangling.

16172. (*Chairman.*) Supposing that the mother was so minded as to put an end to the life of her child; if opium was not available some other means would no doubt be discovered? The evil consists not so much in the use of opium as in this lamentable disposition to put an end to the life of children?—One of the easiest means would be the use of opium, and it would be the most painless.

16173. All regulations which might be imposed to restrict the use of opium are extremely easily evaded, are they not? Any further restrictions that might be practicable to impose on the use of opium might be easily evaded. It is difficult, is it not, to prevent evasion of regulations?—At present there are no restrictions but what could be very easily evaded.

16174. Do you know of any others that could be adequately enforced?—I am not prepared to say.

The witness withdrew.

Miss M.
Greenfield.

16 Jan. 1884.

Miss
Carlton.

The
Rana Dalip
Singh.

The
Rana Dalip
Singh.

16 Jan. 1894.

16189. Do you think that the use of opium is always injurious?—It is useful for diseases, but it is harmful when taken in excess.

16190. What would be the popular opinion if the use of it were prohibited except for medical purposes?—The people would suffer much loss as the interests of the cultivators are greatly involved in the opium cultivation.

16191. Is opium cultivated in your State?—Yes, to some extent.

16192. Can any man cultivate if he likes or sell opium to whom he likes?—He is quite at liberty to sell if he likes.

16193. Is the cultivation free?—The cultivation is free.

16194. Is it known when the cultivation of opium began in the hills in your own State and the neighbouring States?—I am not aware.

16195. From time immemorial?—So long as I can remember.

16196. Is there any tradition about when it began?—I am not aware.

16197. If the cultivation of opium was prohibited in India would the Native States be willing to prohibit it in their territory?—They would not alter the present policy.

16198. What are the arrangements regarding the export and import of opium?—Opium cannot be exported from my territory into other States, but people in other States can bring it into Baghat. They get passes from me and then they can import it from other States.

16199. (Mr. Pease.) Have you any personal advantage as a ruler from the growing of poppy in your State?—I have.

16200. How much is it worth a year?—Rs. 1,800.

16201. In what way do you get it?—I am speaking from the revenue derived from the sale of opium. Opium is free as regards cultivation, but the revenue from the sale of these licenses for retail vendors is Rs. 1,800.

16202. Do you grow poppy yourself?—Yes.

16203. I understand you get Rs. 1,800 from the licenses granted to your people?—Yes.

16204. (Mr. Wilson.) Do any of your tenants cultivate poppy?—To some extent for their own use, not for sale.

The witness withdrew.

Husain,
Khan
Bahadur,
C. I. E.

MASHIR-UD-DOULA MUMTAZ-UL-MULK KHALIFA SYED MAHOMED HUSAIN, KHAN BAHADUR, C.I.E., called in and examined.

(Chairman.) As Foreign Minister of the Patiala State, you have submitted a memorandum which explains at some length the position of your State. It will be carefully perused, and form part of our appendix.

16216. (Sir James Lyall.) Will you tell the size of the Patiala State?—About 5,800 square miles. It consists of three parts—one in the neighbourhood of Simla Hill States, another surrounding the capital of Patiala, which is between the districts of Umballa, Hissar and Karnal, Ferozepore and Ludhiana; and a detached portion on the borders of Rajputana, the States of Jaipur and Ulwar.

16217. I believe it is the leading Sikh State in India?—Yes.

16218. What are the facts regarding the consumption of opium in his Highness' territory?—Although no documents are prepared in the State which can accurately show what quantity of opium is consumed by the different races out of the entire population of the State (which, according to the last census, was 1,583,557 souls, consisting of 243,362 Sikhs, 759,928 Hindus, 352,046 Mahomedans, and 228,221 sweepers, menials, and other races, yet, by approximate estimates which can be formed, it can be said that out of the total quantity of opium consumed in the State (which varies from 1,100 to 1,200 maunds) one-third is consumed by the Sikhs and the remaining two-thirds by the other races.

16219. What is the effect of such consumption on the moral and physical condition of the consumers?—Mothers in this country often give opium to their children (male or female) during their infancy; so that there is hardly any child throughout this country who has not eaten opium in his childhood. In spite of all this, however, no bad effects are apparent on the health of children by its use. Sheikh Ibrahim Zank, a famous poet of Delhi, says: "The fact that the nurse administers opium to the babies is due to a desire to accustom them to the bitterness of life." If, however, in any rare case a boy who is about to come of age, beginning from 12 to 18, takes to opium-eating, there begin to appear special symptoms of laziness about his person, the growth of his beard is stunted, his complexion becomes pale, and

16205. I should like to know in what way opium affects the people morally?—People who are in the habit of taking opium are not affected, but those who take it occasionally become ill. People who are in the habit of using it do not lose their character in any way. They are intoxicated, but their character is not affected very much.

16206. Is it a good thing to take opium regularly when there is no disease?—It is not good. The use of opium, except in cases of disease, is not good.

16207. (Mr. Mowbray.) Is your territory mixed up with British territory?—It is not mixed up with British territory, but it is mixed up with Patiala territory.

16208. Does it border on British territory?—Yes, in parts.

16209. Do I understand that all the opium that is grown in your territory is consumed there, or is some of it sent into British territory?—The whole of it is consumed in the State; none of it goes out.

16210. What do you mean by "Of course stopping imports from Native States would be felt as unjust"? Do you mean stopping imports from Native States into British territory?—I referred to both. The import of opium into Native States and the import *vice versa* would both be felt as unjust.

16211. (Mr. Haridas Vcharidas.) Do you charge the cultivators anything extra on the ordinary rent for the cultivation of poppy?—The same as for other crops.

16212. Are the cultivators obliged to sell their opium to the contractors to whom you have given contracts for sale?—Cultivators in my territory do not sell it to anybody.

16213. What do they do with it?—They consume it themselves.

16214. Where do the contractors get the opium to sell for which they pay Rs. 1,800 for licenses?—They get it from other territories.

16215. (Chairman.) Your evidence in short comes to this, that you have come here as a representative of the Hill States to express the desire that things should be left as regards opium very much as they are at present?—That is so.

the development of his body is affected. But such persons are very rare—say, one or two in one thousand, because the parents and elders of children very severely check them from taking opium at such an age. Such persons, too, are very few, who, after the full development of their body, take to opium-eating before the age of 40, because the using of opium before that age (otherwise than medically), simply for the sake of intoxication, is looked down upon by society and is considered a luxurious habit. But no injurious effects are visible in the health and appearance of such persons. To use opium near the age of 40 is in no way considered bad. It is, on the other hand, considered a means of preserving health and prolonging life. A few such persons who are now between the age of 40 and 60 and have been eating opium for years, and are in every way healthy, active, hardy and industrious, can be produced in support of what I have stated. There is a Sikh Sardar, 79 years old, who belongs to the Phulkian family and is a collateral of His Highness the present Maharaja. He has been using opium moderately twice a day for the last 50 years, and likewise drinking a small quantity of liquor; yet he is healthy in every respect and has always been considered a man of good conduct. Those who argue that the use of opium makes men cowardly, lazy and worthless should consider the fact that in the British Native Army the Native Sikh sepoys are mostly opium-eaters, and they have rendered services in extremely warm, cold, humid, rainy and arid climates in different countries. It is believed that all the military authorities will bear testimony to the fact that the valour, hardihood, and industry of these sepoys have never been blighted on account of their habit of opium-eating. This fact, also, is worth consideration, that like the two divisions in the army—*viz.*, the European and the Native Army—made by the British Government, the ancient Moghul Emperors had also constituted their army into two divisions, which they called the "Mughliá" and the "Rajputiá" divisions of the army. The valour and hardihood of those native Rajput sepoys is proved by the gallant successes achieved by them, which are everywhere mentioned in their histories.

The French traveller, Dr. Francis Bernier, who remained in India for 12 years in the time of the Emperors Shahjahan and Aurangzebe, and was an eye-witness to many battles and campaigns, was astonished to see the Rajput sepoys consuming very large quantities of opium, while, on the other hand, the praises bestowed by him upon them for their gallantry and hardihood are manifest from a perusal of his work. No change takes place in the appearance or bodies of people who eat opium after they are full grown, provided they use it moderately, and they can do all sorts of physical and mental labour. So that if four or five hundreds of moderate opium-eaters and non-eaters be intermingled one cannot distinguish which of them are opium-eaters and which not. It is generally believed that after eating opium a man becomes fresh for doing every kind of labour; but, of course, if an opium-eater does not get his dose at the fixed hour, or gets a smaller dose than usual, his nose and eyes become watery and he feels uneasy and fatigued. This remark applies to all stimulants. A "moderate" quantity varies with the constitution of the consumer. Opium-eaters, should they even take unusually large doses at a time, do not become intoxicated or excited like those who drink liquor. Under the influence of this drug the eater does not become senseless, nor does he talk nonsense or become quarrelsome as drunkards do, but its strongest effect is that the man goes to sleep. In short, even if opium is not taken for the preservation of health, but for the sake of intoxication only, it is, in comparison with *bhang* or spirits, a harmless and economic intoxicant used by respectable people. By economic I mean that, leaving the cost of European wines out of question, a moderate consumer will at least spend 4 annas to satisfy his craving on country liquor, even that which is cheaper, while, on the contrary, he would be content with opium worth a pice or half a pice.

16220. What would people think of interference?—The people would certainly resent it. Ever since the appointment of, and enquiries by, the Opium Commission has been talked of, the opium-eaters have been frightened and are anxious, while those who are non-eaters consider the proceeding as a useless one. As the practice in the Punjab to eat opium more than in moderate and reasonable quantities is already extremely limited, hence there appears to be no real necessity to prohibit its entire use. To do so or to impose further restrictions would not be beneficial in any way, and such a measure would spread dissatisfaction among the people, and would probably injure the health of the consumers, while the Government revenue would also decrease, and the loss would have to be made up by imposing some new taxation, which is always disliked in this country. To do so (that is, to abandon the opium revenue and impose new taxes) would be vexatious and unreasonable, as far as the people are concerned, and would be a bad policy for Government to adopt. It is also probable that the stoppage of opium would necessarily increase the consumption of spirits and *bhang*, which are far more injurious to health and morality than opium, and are more costly. Ever since the appointment of the Opium Commission has been talked about, it appears that the people generally attribute the proposed stoppage of opium not to the good intentions of Government, but, on the contrary, suspect that the English nation under this pretext wishes to increase their already big trade in spirituous liquors. Some of the evidence tendered before the Hemp Drugs Commission at Bombay also corroborates this view of the people. To illustrate the unpopularity of taxation, I may refer to the income-tax and to the proposal to raise the minimum from Rs. 500 to Rs. 1,000. The income-tax yields 12 or 14 lakhs, whereas the Excise Department yields 20 lakhs, of which I believe one-third is opium. It is a matter for consideration whether the loyal and gallant sepoys of the Native Army will be disheartened or not when they will see that their fellow European soldiers are daily supplied with rum or brandy as a part of their rations by Government free of cost, while the use by them of opium, for which they pay out of their own pockets, is prohibited, or is made costly by the imposition of a heavier duty. The Sikh sepoys, especially, will feel this interference disagreeable when they will find in their religious traditions that Gurugobind Singh himself used to take opium, and directed his followers to eat it while travelling in the time of peace and while in war. In proof of this statement I would refer to the religious history of the Sikhs called "Goor Vilas" of the tenth Badshahi by Sukha Singh Anandpuria; the "Panth Parakash" by Bhai Ruttan Singh Bhango of Bhari, and the "Surya Parakash" by Bhai Santokh Singh of Kaintal. If the use of opium requires to be stopped it is only when used in the form of *chandu* and *madak* which people smoke and this habit is considered a very bad one by respectable natives and is very injurious to health, but it is gratifying that this evil practice does not generally exist in the

Punjab." The use of *madak* and *chandu* is authoritatively prohibited in the State. In 1876 a resident of Delhi applied to the State authorities to lease to him the monopoly of selling *madak* and *chandu*, and the Revenue authorities wished to grant the application; but the higher authorities, who were aware of its evil effects, rejected the application and declared the use of opium in the form of *chandu* and *madak* as unlawful. If the matter is further considered, opium cannot be blamed on account of *madak* and *chandu*, even because the latter are improper forms of the use of opium and there are many useful articles in the world, even ordinary food and water, which, if taken in improper forms, prove injurious. Of course opium, alcohol, tobacco, tea, and coffee, etc., are not included among the necessities of life, i. e., they are not part of food, but are medicines, and medicines prove injurious only when they are used in excessive quantities. All the articles mentioned above are, however, used by lakhs and crores of people throughout the world for non-medicinal purposes, who also spend crores of rupees upon these things as if they had been included among the necessities of life. If all these things are moderately used they are not harmful, and all the objections of the objectors are based on the excessive use of these drugs, that is, that if they have observed any person or persons suffering from the injurious effects of eating opium in excess, they apparently have, without thoroughly considering both sides of the question, generally condemned the use of opium for man as highly injurious. Opium-smoking has been introduced within the last 40 years.

16221. Would the people be willing to bear in whole or in part the cost of prohibitive measures?—No. They will not be willing at all, because opium is already sold at a higher price on account of the Excise Administration existing in the Punjab or in the Native States in the Punjab, the facts regarding which were fully detailed in the memorandum submitted to the Punjab Government.

16222. What are the prices of opium as sold in the different States?—Ludhiana, refined opium, per rupee, 4 tolas; Umballa, 3½ tolas; Karnal, 3 tolas; Simla, 2 tolas; Hissar 4 tolas; Ferozepur, 3 tolas; Jeypur State, 6 tolas; Dholpur State, 5½ tolas; Bharpur, 7 tolas; Gwalior, 8 tolas; Patiala, 3 tolas.

16223. (Chairman.) There is a much smaller quantity grown in Patiala than in other States?—Yes.

16224. So that in Patiala the policy is repressive?—Yes.

16225. (Sir James Lyall.) If the production of opium for non-medical purposes is prohibited throughout British India, how would such prohibition be regarded?—The prohibition appears to be impossible, and can neither be effected in British India nor in the Native States. Because the religious laws of no other people on the face of the earth have more strictly forbidden the use of spirituous liquors than those of the Hindus and Mahomedans. But it is proved from ancient history that the use of spirituous liquors could not be prohibited even in those days when the principles of these religions were rigorously enforced by the interference of the State authorities, and at a time when the Hindu and the Mahomedan religious laws were revered by the people more than the laws framed by worldly rulers, and when the people considered that to act against the said laws would not only bring punishment and disgrace upon them in this world, but in the next world also. So, when the religious laws, while in the zenith of their glory, could not stop the use of spirituous liquors, how can the laws framed by the Legislative Council succeed in prohibiting the production and use of opium contrary to habits of lakhs of people? If such laws are framed, the result, indeed, would be that on account of this interference and prohibition, a sort of ill-will will spring up between the Government and the people, and the constant prosecutions will necessarily lead to displeasure and disturbances. So long as the Government wishes to recognise the use of opium for medical purposes as lawful, the cultivation of poppy and the production of opium for such purposes will also be lawful, and the result would be that the people will have many opportunities of keeping, selling, and eating smuggled opium. How would then the Government take upon itself the heavy trouble of making enquiries as to which persons eat opium for medicinal purposes and which not? Moreover the people would thus become inclined to receive, and the medical men to give, fictitious certificates which will create among the people a moral vice, worse in comparison with the supposed moral evils of opium-eating. When the Portuguese introduced the use of tobacco in India, certain Moghul Emperors as well as the Shah of Persia (Shah Abbas II.) tried to prevent its consumption with such severity that they ordered the lips of those who smoke tobacco to be cut off; but as the public tendency for smoking could not be checked by authority, all these efforts proved

futile : At present there are lakhs of people in India who use opium either for medicinal purposes or for the sake of intoxication, and this habit has been prevalent as a recognized custom among all the races in India from centuries past, and the use of opium is not prohibited by any Asiatic religion. Is it then possible that Government may prohibit its use and put to severe trouble those millions of people who are habitual consumers of it ? And is it then not possible for the people to think that the Government allows the use of liquor, which is condemned both by the Hindu and the Mahomedan religions, and prohibits the use of opium, which is religiously not forbidden ? If the Government will compel the Native States to prohibit the production and use of opium in their own territories, the question will have two phases. Firstly, there are Native States the opium produced in whose territories has been exported into British India and even into foreign countries like China, etc., from long long times.

In the case of these States even so much interference as to prohibit the exportation of opium from their territories into any other one will be considered as a severe rigour upon their subjects who are benefited by the cultivation of opium. They will suffer pecuniary loss; and although the Government may pay these States and their subjects yearly compensation, there will always continue between the Government and such States unpleasant correspondence and discussion. And if this prohibition would be made so strict as not to allow the subjects of the Native States even to consume the opium produced in their own territories, it will be the cause of further dissatisfaction to the Native States and their subjects, because they will think that the Government interferes in the internal affairs of their States for a thing which they do not consider injurious according to their ancient customs and experience, and the use of which they consider religiously lawful. The interference will be particularly more disagreeable when made against existing treaties in such trifling matters, and it does not seem advisable for the British Government to take up such matters.

16226. You have said that opium is used as a medicine and as an intoxicant : do you mean by an intoxicant a sort of stimulant ?—Yes, a stimulant. The word "intoxicant" for opium is not proper. It is not intoxicant like liquor or *bhang*. A man after using opium, even in large quantities, is never senseless.

16227. (Mr. Mowbray.) What is His Highness' revenue derived from opium ?—Between Rs. 70,000 and Rs. 80,000.

16228. Is it derived from license fees for the sale of opium ?—Yes.

16229. The greater portion of which is imported into His Highness's dominions under the arrangements set out in the memorandum ?—Yes.

16230. (Sir James Lyall.) Cultivation, I believe, is free ?—Yes, it is like other products of the soil : there is no special taxation.

16231. (Mr. Wilson.) It is stated in paragraph 6 of the memorandum that "the cause of the increased consumption of opium as compared with *post* is that a much smaller quantity of the former gives more intoxication than a cupful of the latter, and it does not affect the digestion like *post*." In paragraph 3 it is said that "the habit of drinking a decoction of poppies (*post*) is very injurious to health."

If opium is more intoxicating than *post*, why is it not more injurious ?—It is not the action of intoxication only, it is not a stimulant only that injures the body. It is more injurious because it is taken regardless of times and seasons, and whether the appetite is good or not. If you take even a cup of cold water early in the morning it will affect the stomach, and when digestion is impaired the health is affected. A small dose of morphia may have still less injurious effects than opium. It is only a comparative statement.

16232. Am I to understand that the Jats do not take opium ?—There are different classes of Jats.

16233. It is said in paragraph 7 of the memorandum that the Jats are less addicted to opium ?—That part of the country are different from the Malwai Jats. The customs and manners are quite different. They are only by caste called Jats; they are not Sikhs. The country is quite different; it is on the borders of Jaipur; and these Malwai Jats are bordering on Ferozpoore and Ludhiana; they are quite different people.

16234. In the western and southern portions of the State adjoining Ludhiana and Ferozpoore, Karnal and Hissar districts there is a great deal of fever from malaria ?—I have heard so much about this in the last sitting and in to-

day's sitting that I think the question belongs to a special committee of physicians, and I don't wish to give an answer about it. Autumnal fever is more or less prevalent throughout all this country.

16235. My question is whether in these portions there is much fever ?—Autumnal fevers are the curse of this country. After the rains there is always fever, more rain more fever, less rain less fever, and which is understood to be malarious fever. It is the case with the whole of the Punjab; perhaps, I may say, the whole of India.

16236. I ask whether in those dry districts there is much malarious fever ?—They are not so dry now, as the canals are running through those parts from the River Sutlej. Where there are great rains in India there is fever; that is the general rule.

16237. Are you acquainted with the teaching of the Mahomedan religion ?—Yes.

16238. Is there a passage in the Hadis (or traditions) which says that everything that produces lassitude of the body is prohibited ?—What Hadis do you mean ? There are several books, some are undoubtedly reliable, and some not.

16239. Is there such a passage in any Hadis ?—Only *bhang* and liquor are prohibited by Mahomedan law : there is punishment for these things.

16240. Are you acquainted with such a passage ?—I am not aware of those words. I do not know what Hadis you allude to, and unless you give me the exact Arabic words of the Hadis discussion the mere translation is of no use.

16241. Can you tell me whether there is or is not a passage in the Hadis to the effect that the prophet said that everything that produces intoxication is prohibited ?—Yes; that is in the Koran, which is above the Hadis; but the question is, what is intoxicating.

16242. I did not quite understand what you said about the boy having a foretaste of the life into which he is to enter ?—I have quoted the verse of the poet as a proof that the use of the opium to the infants is a general custom of the country, and have used the verse here to give that idea like a proverb which illustrates the generality of the custom. As opium's taste is bitter the poet means to say that as if the nurse by giving opium to the child prepares him to the foretaste of the bitter experiences of human life.

16243. With reference to paragraph 18 of the memorandum, may I ask who it was that objected to the licensing of *madak* and *chandu* ?—My elder brother, the Prime Minister of the State. He was then under the Council of the Regency, which acted for His Highness the Maharaja in the time of his minority.

16244. Do I understand that a resident in Delhi recommended that there should be this monopoly of selling *madak* and *chandu*, and that your brother objected on the ground that it was a bad habit and injurious to the people ?—Yes. But by the word "resident" here is not to be meant a British Political Officer, but a common native individual, resident of the town of Delhi, who applied for a license.

16245. What is meant by "refined" opium ? In what way is it refined or purified after it is collected ?—Ordinarily it is mixed with several impurities, and those are removed before the people take it. There is no chemical process, only ordinary refining. They boil it, and it settles down. There is a great deal of difference in the price.

16246. (Sir James Lyall.) Are you talking of Malwa opium ?—Of all opium; it is all boiled, Malwa or Punjab.

16247. Do the licensed vendors boil it ?—Some of them boil it, and some do not. Those who wish to keep a good name for their shops boil it, others who do not care for their good name sell the opium with a mixture, dust, stone or other impurities.

16248. (Mr. Haridas Veharidas.) That is on account of the difference in price ?—Yes.

16249. (Sir James Lyall.) Does the Malwa opium that comes to Patiala come refined, or do you refine it after it comes ?—There are three kinds of opium, I do not know much about the prices.

16250. (Mr. Pease.) The tendency of all measures has been to restrict the use of opium, not to increase it ?—In the Punjab there should be no tendency to increase more than at present.

16251. (Mr. Fanshawe.) As a practical rule of life, is the use of opium considered to be prohibited by orthodox Mahomedans in this country ?—Neither by Hindu nor by Mahomedan law. I know about both, because we mix with Hindus and live with them.

16252. As a practical rule of life, Mahomedans consider that opium is not prohibited in this country?—It is not prohibited.

16253. (*Chairman.*) You come before us as a Minister of one of the most important Native States of India where there is an extensive consumption of opium, and you say that you have not found that among your people the moderate use of opium has been productive of any moral degradation?—No.

16254. With regard to the proposal of prohibition, except for medical purposes, you do not regard it as extending to the people of your own State, but you give us your opinion on the question from an independent standpoint?—That is so.

16255. Not as affecting the people of Patiala, but the people of the Punjab as a whole?—The whole population of the Punjab.

The witness withdrew.

GENERAL SARDAR RATAN SINGH, Member of the Council of Regency of the Jind State, called in and examined (through an interpreter).

16259. (*Chairman.*) What is the population of the Jind State?—Hindus 223,788, Sikhs 15,020, Mussalmans 38,503, Sweepers, etc., 7,244 : total 284,560.

16260. (*Sir James Lyall.*) What are the facts as regards the consumption of opium by different races in His Highness's territories?—Opium is taken in two ways, by purifying opium and taking it in the form of a pill, and by taking it according to the prescriptions of native physicians in the compound called *barsk*. Pure opium is often given to infants by women for the purpose of preserving their health.

16261. What is the effect of such consumption on the moral condition of the consumers?—By the moderate use of opium there is no bad effect on the moral condition of the consumers as is the case with the use of other intoxicants. If any consumer at any time even takes more than his ordinary dose, it does not create any bad passion, excitement, or intoxication by which any crime, such as theft, riot, etc., may be apprehended, because up to this no accounts of the kind have come to my knowledge.

16262. What is the effect on the physical condition of the consumer?—Taking of opium moderately does not produce any bad effect on the physical condition of the consumer. In every tribe generally when people become old and their bodily organs become inactive they commence the use of opium which is positively beneficial to them, and preserves their health. Its use is not looked down upon, and intoxication from opium does not affect their brain and wisdom. Most people who have to work hard eat opium to keep their bodies stout and strong, because under its influence they feel less fatigue and carry on their work vigorously. People also generally take it on account of illness, such as diarrhoea, dysentery, cold, cataract and other diseases of the eyes, and rheumatic pain in the limbs, and these people are afraid of relapses should they stop its use. Those who commence the use of opium for the sake of pleasure, in their youth, are looked down upon by society and are considered as using it for licentiousness, but their health is not affected in any way. The health of those who eat opium in excessive quantities suffers, and they become emaciated and drowsy; but such cases are rare.

16263. What is the disposition of the people as regards the use of opium for non-medical purposes, or in other words, would they welcome or resent any interference with the use of opium for non-medical purposes?—It is generally found that in every country some kind of intoxicant is habitually taken by the people. The use of opium by Asiatics has been prevalent since time immemorial. Other intoxicants are not allowed by all religions. The use of opium is, therefore, found to prevail in every religion. People would dislike the stoppage of opium; particularly those whose religion forbids them to take liquor would be highly displeased. It is also considered that the stoppage of opium will increase the consumption of other intoxicants, and some persons would attribute the stoppage to a desire to increase the trade in spirituous liquors.

16264. Would the people be willing to bear in whole or in part the cost of prohibitive measures in the shape of increased taxation?—People of this State are not capable

16256. And you say, arguing from your experience in Patiala, that if such a prohibition as has been proposed were enforced the Government revenue would decrease, and you think such a prohibition is not called for and would be objected to by the people of the Punjab?—That is my opinion.

16257. You made a reference to some past rulers who have attempted to put restrictions upon personal indulgences. I understood the object of the reference to be to show that in matters of personal habit and custom prohibitory legislation, unless supported by private conviction and public opinion, is easily evaded, and that such restrictions as have been proposed for our consideration might be vexatious, and probably, in your judgment, ineffective?—Yes.

16258. Supposing that a prohibition preventing opium from being used except for medical purposes were extended to the Native States and to your State, do I understand that your people would object?—Yes.

of bearing in whole or in part the cost of prohibitive measures in the shape of taxation, nor can they willingly consent to do so.

16265. If the production and use of opium for non-medical purposes is prohibited throughout British India, could such prohibition be extended to the Native States?—If the Government prohibits the use of opium in British territory, similar orders could be issued in the Jind State, but certain obstacles are apprehended in so doing.

16266. What is the nature of the existing arrangements with His Highness's State in respect of the transit of opium through British territory, and could those arrangements with justice be terminated?—Opium is not manufactured in the Jind State and, therefore, it does not pass through British territory. As regards the opium which is purchased from British territory for the requirements of the subjects of the State, its transit through the British territory is regulated according to the rules of the Government of India and by means of licenses and permits.

16267. To what compensation, if any, would His Highness's State be entitled in the event of measures of prohibition being adopted?—According to the annual accounts, the present income of the State from opium alone is Rs. 8,024, and it will suffer a loss to this extent in the case of prohibition being adopted, and would be entitled to compensation to that extent. It is also considered proper to note here that by the stoppage of opium there would be a great loss to the finances of the British Government, and also in the revenue of those Native States in which opium is cultivated, and if this loss of revenue is not made good in some form, the people probably won't be able to bear the burden.

16268. You are President of the Council of Regency of the Jind State?—I am.

16269. The State of Jind, the State of Nabha, and the State of Patiala have all treaties with the British Government granted to them after the Mutiny for good services done in the Mutiny?—Yes, they have all got treaties.

16270. Those treaties bind the British Government not to interfere with the internal government of the States?—They do; the British Government is bound not to interfere.

16271. They would believe such a thing as the prohibition of the cultivation of opium to be interference; would they not?—I cannot give a decided opinion. I am not sure.

16272. (*Mr. Wilson.*) Do I understand that 79 maunds of opium are purchased annually for the Jind State?—That is so.

16273. There is no opium grown in that State?—No opium is grown there.

16274. Do you wish us to understand that when a person has intoxicated his brain, it has no effect?—Its use is not looked down upon, and intoxication from opium does not effect their brain and reason.

16275. I wish to know the exact meaning of that statement?—It does not do any harm if taken in moderate quantities.

16276. (*Mr. Fanshawe.*) In speaking of intoxication, do you mean the effect of opium as a stimulant?—I am referring to its exhilarating effects.

The witness withdrew.

16 Jan. 1894.

General
Sardar
Ratan
Singh.

LALA DEWA SINGH called in and examined (through an interpreter).

Lala Dewa Singh.

16 Jan. 1894.

16277. (*Sir James Lyall.*) What office do you hold?—I am a Member of the Council of His Highness the Maharaja of Nabha.

16278. Nabha State is one of the three Sikh States?—Yes.

16279. What is the population of the State?—283,000.

16280. What are the facts as regards the consumption of opium by different races in His Highness's territory?—The annual consumption of opium by different races in the State amounts to 180 maunds.

16281. What is the effect of such consumption on the moral and physical condition of the consumers?—It appears from the evidence given by doctors, native physicians, etc., that the excessive and continuous use of opium injures the physical and moral condition of the consumers. Its occasional use is undoubtedly beneficial.

16282. Do you mean that the moderate use of opium is also injurious?—Even a moderate use is injurious.

16283. What is the disposition of the people as regards the use of opium for non-medical purposes, or, in other words, would they welcome or resent interference with the use of opium for non-medical purposes?—I have made enquiries through the zilladars of the tract. They state that the majority of the people declare that in future they will not begin the habit of opium-eating without necessity and without taking medical advice. At present they promise this of their own accord. The people who now eat opium should, therefore, be left alone, as they will surely feel annoyed at the prohibition. The use of opium should not be stopped altogether, but should be allowed for medical purposes on doctor's advice.

16284. Do you think that the promises of the majority of the people, that is, the people who do not eat opium now, that they will not begin the habit without necessity or medical advice can be relied upon?—They can be relied upon.

16285. By the influence of His Highness the Maharaja?—If they are reminded of it and continue to receive instructions.

16286. Would the people be willing to bear in whole or in part the cost of prohibitive measures in the shape of increased taxation?—The people would not be willing although the Maharaja would be willing to assist if it was introduced into British territory.

16287. If it was introduced by the British Government throughout India every possible effort would be made to introduce it into the State?—Yes.

16288. What is the nature of the existing arrangements with His Highness's State in respect of the transit of opium through British territory, and could those arrangements with justice be terminated?—There is an establishment of Inspectors, etc., for the prevention of illicit import of Malwa opium into this State. These arrangements are in accordance with instructions received from Government. If they are discontinued illicit import of opium is to be apprehended.

16289. To what compensation, if any, would His Highness's State be fairly entitled in the event of measures of prohibition being adopted?—As the prohibition is entirely beneficial to the people, this State does not wish for any compensation for the loss of revenue resulting from such prohibition.

16290. What attitude has the Maharaja taken up with regard to alcohol?—He dislikes every intoxicant.

16291. Has he made any arrangements for stopping the use of it?—He has succeeded in reducing its consumption considerably.

16292. Has he made it dear?—It is not sold in less quantities than one bottle, even to retail vendors.

16293. At what price is it sold?—From one rupee, four annas to two rupees per bottle. The main thing on which

we rely as regards restriction is that it is not sold in quantities less than a bottle.

16294. Has any prohibition been attempted in the case of opium?—None hitherto. Instructions have been issued during the last three years asking people to lessen the use of opium.

16295. Is not the distilling of liquor a State monopoly?—It is a State monopoly.

16296. How long has that been the case?—For the past five years.

16297. Does the revenue from liquor decrease or increase?—Considerably decreases.

16298. Is liquor much dearer in Nabha than in Patiala and Jhind?—I am not aware of the relative prices in the different States.

16299. (*Mr. Haridas Vekaridas.*) Do you give licenses for selling opium?—Yes, the same as in British territory.

16300. What revenue does the State derive from it?—About Rs. 13,000, including Rs. 6,000 received on account of Malwa opium.

16301. If instructions to restrict the use of it are continued to be issued, will not the revenue gradually go away?—Yes.

16302. And it will be so much loss to the State?—It will.

16303. And to compensate for that you will have to levy a tax on the people?—There will be no necessity to impose new taxations.

16304. For the last three years instructions have been issued that there should be no new opium-eaters, has the revenue, therefore, on account of opium been reduced?—It is on the decrease.

16305. What was it three years ago?—I am not aware.

16306. (*Mr. Mowbray.*) With regard to the opium revenue, is it derived from the licenses to sell opium?—Yes, and the duty on Malwa opium.

16307. What is the duty on Malwa opium?—Rs. 3 per seer.

16308. Do I understand that all the opium imported into His Highness's territory is Malwa opium?—Some is received from the hills and other places as well.

16309. In the case of the Malwa opium, I suppose it is purchased on behalf of His Highness's Government at Ajmere—is that so?—Yes.

16310. And at Ajmere he has to pay a duty of Rs. 3 a seer, is that so?—Yes.

16311. Then I understand that the duty is refunded by the British Government?—Some is kept and some is refunded.

16312. Is that what you meant in the first instance when you said part of the revenue of the State was derived from the duty on Malwa opium?—That is what I meant. The whole of it is not refunded.

16313. Is there any reason to oblige His Highness to purchase this opium at Ajmere, or could he simply direct his agents not to purchase this opium at Ajmere and so cut off the supply from his State?—That State must receive the same treatment as other States. There is no particular reason to oblige him to purchase there, but the State must be dealt with on the same principle that other States are dealt with.

16314. It is optional with him to buy or not as he pleases?—Quite optional with him.

16315. (*Mr. Wilson.*) Do I understand that the prohibition of opium consumption has not been carried out in the Nabha State?—No, it is not entirely prohibited.

16316. But if it was prohibited in other parts of India they would be quite willing and glad to have prohibition adopted?—Yes, if it is prohibited in British territory the people will be quite willing to have it prohibited in Nabha as well.

16317. (*Mr. Pease.*) Is there any growth of poppy in the State?—No.

The witness withdrew.

Babu SAUDAGAR LAL called in and examined (through an interpreter).

Babu Saudagar Lal.

16318. (*Sir James Lyall.*) Do you wish to put in this letter from His Highness the Raja of Nahan?—Yes.

16319. Where is the Nahan State?—To the north-east of Umballa.

16320. In the Himalayas?—Yes, a branch of the Himalayas.

16321. How long has the dynasty lasted of which the Raja is ruler—how many generations?—About 58 generations.

16322. Is not the Raja a Rajput?—Yes, he is Rajput.

16323. Has he got a decoration from the Government of India?—Yes.

16324. What is it?—G.C.S.I.

16325. What is the population of the State?—124,134 exactly.

16326. Are they all Hindus?—Yes, the natives are all Hindus, but there are generally some outsiders there from the district of Umballa. There are Mahomedans there as well.

16327. Can you tell us what is the revenue of the State?—I think it is now about six lakhs of rupees.

16328. What are the facts as regards the consumption of opium by different races in His Highness's territory?—Amongst the hillmen opium-eating is very rare. Zilladars and Lumbardars of large villages in the hills have informed us there are no opium-eaters in their villages. Others know of one or two cases only. That this information is correct is shown by the fact that among the prisoners in the jail it is extremely rare to find a hillman who is an opium-eater. At present among 47 prisoners there is only one opium-eating hillman; two others are Afghans. The Kahars in Nahan use opium when they are getting old and unable to do their work. Their Chaudhri informs us that there are about 50 adult male Kahars in Nahan, of whom about 10 use opium. He also informs us that without opium these men could not earn their living. We have enquired into the circumstances which led to their commencing the use of opium, and found four chief causes—(1) as a substitute for alcohol; (2) to enable them to withstand the effects of cold and exposure; (3) for ill health, especially for dysentery, rheumatism, and catarrh; (4) to enable them to endure fatigue and perform their work. There are a few other opium-eaters in Nahan, but they, properly speaking, are not natives of the place, although many have resided here for some years.

16329. Who are the Kahars?—The water-carriers and dooly-bearers.

16330. What is the effect of such consumption on the moral and physical condition of the consumers?—Physically opium appears to do very little, if any, harm. Morally they are also like their neighbours, and are certainly much better behaved in every way than the consumers of alcohol. It has no bad effect either on the moral or physical condition of the people. It is not injurious to health. Of course if it be taken in excess it may be injurious, but generally the people do not take it in excess, only in very small quantities, and in that case it is not pernicious to health.

16331. What is the disposition of the people as regards the use of opium for non-medical purposes, or, in other words, would they welcome or resent interference with the use of opium for non-medical purposes?—Yes, there is not the slightest doubt that the people would resent any interference with the custom of opium-eating, and if it could be carried out, which I doubt, they would take to alcohol or ganja in its place. And these latter two articles are certainly much more harmful than opium.

16332. Would the people be willing to bear in whole or in part the cost of prohibitive measures in the shape of increased taxation?—The people would certainly object to be taxed in order to put a stop to the custom of opium-eating, and any such facts, however small, would certainly be very unpopular.

16333. If the production and use of opium for non-medical purposes is prohibited throughout British India, could such prohibition be extended to Native States?—It would be difficult, if not impossible, to prohibit the production and use of opium in Native States.

16334. Have you any other remarks to make? Is it a useful substitute for alcohol?—Yes, I know two or three persons who have adopted it as a substitute for alcohol. It has done them great good. They have entirely given up intoxicating liquors and now they take opium only.

16335. Do you think opium-eating ever causes crime?—It never does that.

The witness withdrew.

PANDIT SARUP NABAIN, Assistant to the Revenue Minister of the Faridkot State, called in and examined.

16359. (Chairman.) What is the population of your State?—Over a lakh.

16360. (Sir James Lyall.) The Faridkot State is near Ferozepore? Is it not?—Yes.

16361. It is a Sikh State?—Yes.

16362. What are the facts as regards the consumption of opium by different races in His Highness's territory?—The people commence taking opium under the following circumstances:—Some persons, whether young or old, who suffer from cold and catarrh, begin to take it as medicine. Agriculturists, labourers and travellers use opium to ward

16336. Is it used in the hills by the women to give to the young children, or is the custom not prevalent there?—It is not prevalent there.

16337. I understand that opium is not grown in your State, is that so?—A little is grown, about 200 maunds is produced every year.

16338. Is that exported?—Yes, a great portion of it is exported, and it is smuggled into other States and other parts of the country.

16339. Is the cultivation free?—It is free.

16340. They may sell it to whoever they like?—Yes, they can sell it, but they sell it to the State.

16341. (Mr. Haridas Vekaridas.) You said that the cultivators sell the opium to the State, why does the State purchase it?—The State trades in it.

16342. In what way?—The State purchases it from the zemindars and exports it.

16343. So that the State derives benefit from it?—Yes, about Rs. 15,000 a year.

16344. And does the State issue licenses?—Yes, there are retail dealers too, and the State sells to these retail dealers.

16345. And the State gets money out of that as well?—Yes.

16346. So that it would be a loss if the trade were prohibited?—Yes.

16347. The State would not like to prohibit opium cultivation?—No, it would not like it.

16348. (Mr. Mowbray.) Is there a large cultivation in your State?—No, it is not very largely cultivated.

16349. There is more opium grown there than is consumed in the State itself?—In the State itself it is consumed very little: a very small portion of the whole produce: only about two or three maunds.

16350. And is it your opinion that, supposing the cultivation were interfered with, the cultivators, who export the opium now, would have any claim to compensation?—Certainly, they will expect it, because they will lose if the cultivation is entirely prohibited there.

16351. The State will lose its license fees and the cultivators will lose the profit of the export trade?—Quite so.

16352. (Mr. Wilson.) Have you made any calculation as to the total value of the crop, of the production of opium?—Yes.

16353. What do you make it?—About 70 maunds of opium comes to the State Treasury, and the State buys from the zemindars at Rs. 8 per seer, and it sells again to the retail dealers at Rs. 15 a seer. In this way the State gets from the transaction about Rs. 15,000 per annum.

16354. Is it your opinion that a considerable quantity is also secreted and smuggled?—Yes.

16355. How much?—About 130 maunds are produced annually and 70 comes to the State Treasury. The rest goes out.

16356. What would be the loss to the State if the trade were prohibited?—About Rs. 15,000.

16357. Have you made any estimate as to what would be the loss to the zemindars?—I can only give you a rough estimate, although if the zemindars are forbidden to grow opium they must lose by it, they may grow something else instead, yet they would not get so much profit from that. Supposing 200 maunds are produced, as they usually sell it at Rs. 8 a seer, the loss will amount to Rs. 64,000 per year.

16358. How much do they sell the smuggled opium for?—Rs. 8 a seer, never less than that.

Babu
Saudagar
Lal.

16 Jan. 1894.

Pandit
Sarup
Narain.

off fatigue. Some habitual drunkards, who cannot afford liquor on account of its high price, have also become opium-eaters. Some people use it occasionally to protect themselves against the unwholesome effects of water. Most people take to its use in winter on being attacked by catarrh, and abandon the use in summer. Some persons consume it as a matter of luxury. Opium-eaters of different classes in the State number about 4,215, of whom about 3,485 take less than one masha per diem; and some 730 take more than one masha per diem. The habit commences with a small quantity; but those inclined to stronger intoxication increase its quantity gradually. Nobody is willing to abandon its

*Panfil
Sarup
Narain.*

16 Jan. 1894.

use, and experience shows that if immoderate consumers be made to give up its use, they will feel great distress. Habitual consumers say that, if the use of opium be forbidden, most of the consumers are likely to die. Opium is also used as a medicine for cattle. People already complain of the high price of opium.

16363. The word intoxication in England generally means a certain loss of the senses. Do you mean to say that everybody who uses opium is intoxicated in that sense?—Not so much intoxication as exhilaration.

16364. What is the effect of such consumption on the moral and physical condition of the consumers?—The excessive consumption of opium puts the consumers in a state of stupor, produces a laziness of temper, and weakens the memory. A habitual consumer cannot work in the event of his not taking the dose at the fixed hour. The moderate use of opium is not injurious, and does not lead to any immoral habit in the consumer. The people of this country think that the giving of opium to infants protects them from small-pox; hence its use prevails also among children to some extent. Mothers also administer opium to their babies in order that the latter may go to sleep and leave them to attend to their household business at leisure.

16365. What are the effects on the people?—The use of opium is injurious to some extent; but an opium-eater does not use such insolent language as is used by a drunkard. On the contrary, opium-eaters become kind-hearted and gentle. Opium consumers consider the eating of sweet-meats, milk and ghi beneficial. The moderate use of opium is not pernicious; but excessive consumers of course become lazy.

16366. Would the people be willing to bear in whole or in part the cost of prohibitive measures?—They will not willingly bear additional taxation imposed to make up the deficiency in the revenue caused by the prohibition of the cultivation of poppy or the use of opium.

16367. If the production and use of opium for non-medical purposes is prohibited throughout British India, could such prohibition be extended to Native States?—If the production and use of opium for non-medical purposes be prohibited throughout British India, the prohibition will be enforced in the Faridkot State under the orders of Government. But in those States which derive a special revenue from opium, and to whose zemindars and jagirdars the poppy is a valuable crop, absolute prohibition will cause a severe loss. Their loss, therefore, deserves the merciful consideration of the Government.

16368. In saying that the prohibition will be enforced in the Faridkot State if the prohibition is enforced throughout British India, does His Highness think it necessary to introduce prohibition as a duty to the Government of India?—He will take it as a duty, but he does not consider he will soon be able to stop the consumption of opium.

16369. Has His Highness formed any opinion whether it is good or not?—His Highness has not spoken about it, but I think he will consider that it is not right to stop it, because the people have been so long accustomed to the use of opium that they will not leave it without great dissatisfaction.

16370. Do you think His Highness considers the use of opium worse, than the use of alcohol?—The excessive use of opium is worse, but taken moderately it is not worse than alcohol, although the excessive use of opium is not more

harmful than the excessive use of alcohol.

16371. What is the nature of the existing arrangement with His Highness's State in respect to the transit of opium through British territory, and could those arrangements with justice be terminated?—In the Faridkot State poppy is not cultivated for the production of opium. Opium is imported from British territory. Under the existing arrangements in the State excise leases are, in the beginning of the year, sold by auction. The lessees after taking written permits from the State obtain license from the Ferozepore authorities under the law in force. They then purchase opium and import it into the State under a pass. The existing practice has been in force for some years past, and it appears to be proper and equitable. It is only to be noted that the Excise Commissioner, Punjab, issued a Circular, No. 4, dated 17th March 1893, directing that the question of opening an excise shop at a locality on the border between a British district and a Native State should be discussed, and that such a shop should not be opened within three miles from the border. In connection therewith in 1893 the Commissioner, on the complaint of a lessee in British territory, passed orders for closing of a shop at village Chaguwala in the Faridkot State.

16372. To what compensation, if any, does His Highness think the cultivators would be entitled if prohibition were adopted?—For the Malwa opium imported into the State the Government realizes duty from the lessees at the rate of Rs. 3 per seer, and this amount is eventually paid to this State by the authorities in Ferozepore District. No duty is, however, levied on opium imported from Simla, Kangra, or other places in British territory. Last year the lease for the sale of intoxicating drugs was sold for Rs. 9,850. The lessees brought into the State about 45 maunds of Malwa opium consisting of 25 half chests. The Government realized from them Rs. 5,355, which amount was afterwards remitted to the State from the Ferozepore Treasury. The lessees also imported about 15 maunds of opium from other places in British territory than Malwa, and no duty was levied on it. Should it be proved to Government that the use of opium is injurious to health, and should it be thought advisable to prohibit its use for the good of the public, the Faridkot State would not ask for any compensation. But it is hoped that in case the use of opium is prohibited, the Government will be merciful to its subjects in British territory and impose no new tax on them for making up the loss of revenue caused thereby.

16373. I want to understand the use of the terms "Government and State". You say "for the Malwa opium imported into the State the Government realizes duty." What Government do you mean?—The British Government. The Government gets duty on the Malwa opium at Ajmere and then pays it back to the State.

16374. What is meant by the "State;" does that mean the State of Faridkot?—Yes.

16375. And "the Government" means the British Government?—Yes.

16376. (Mr. Pease.) What is the character of the enquiry from which they learnt the exact number of opium-eaters and the quantity they take?—About 25 clerks were sent out to each village. Two or three and in many instances more villages were fixed for each man, and they enquired which men in the State ate opium. We found out the number in that way.

The witness withdrew.

*Mr. Zorawar
Singh.*

Mr. ZORAWAR SINGH called in and examined (through an interpreter).

16377. (Sir James Lyall.) I believe you are a Member of Council of the Bilaspur State?—Yes.

16378. How far is Bilaspur from here?—140 miles.

16379. What is the population?—96,000.

16380. In your opinion how many grown-up men in a hundred use opium in your State?—8 per cent.

16381. What do the people use it for?—Generally for dysentery and pains in the side, rheumatic pains. When a man gets more than 40 years of age, he uses it with advantage to strengthen himself.

The witness withdrew.

The TIKA SAHIB RAGHUNATH SINGH called in and examined (through an interpreter).

*The Tika
Sahib
Raghunath
Singh.*

16384. (Chairman.) I believe you are Tika Sahib of Bushahr?—Yes.

16385. What is the population of your State?—75,000.

16386. (Sir James Lyall.) You are the eldest son of the Raja of Bushahr?—Yes.

16387. You administer the State for your father I believe?—Yes, I am administering the State on behalf of my father.

16388. The State is in the interior of the Himalayas?—Yes, the State lies in the interior of the Himalayas, and it extends up to Thibet.

16389. Is there much cultivation of poppy in Bushahr?—There is a good deal of poppy.

16390. Is there any tradition to show when the cultivation began?—It began in ancient times. At first the people could not derive so much profit as they derive now. The cultivation has increased considerably since 1811.

16391. That is about the time when the Gurkha rule was abolished?—Yes.

16392. While the Gurkha rule lasted I suppose Bushahr was shut out from India?—Yes, it was entirely cut off.

16393. So that probably before the Gurkha rule there was as great a trade as ever in opium?—I do not know much about what was the case before then.

16394. Are you against the prohibition of the cultivation and use of opium?—I am against it.

The witness withdrew.

LALA BHAGWAN DASS called in and examined (through an interpreter).

16400. (Chairman.) I believe you are Vazir at Jubbal?—Yes.

16401. What is the population of your State?—21,000.

16402. (Sir James Lyall.) Is Jubbal behind Simla in the interior of the Himalayas?—Yes.

16403. Is it a Native State?—Yes.

16404. Is opium much cultivated there?—Yes, it is.

16405. Could you give any figures—do you know the acreage?—10,000 bighas of land out of a total area of cultivation of one lakh.

16406. Is it grown in the best land near the villages?—Yes, it is grown in the best land.

16407. Is it more profitable than other crops?—It is much more valuable than the other crops. One bigha of land can be sown with poppy and will yield Rs. 10, whereas no other crop will yield more than Rs. 3 in any part of the State.

16408. What is the size of the bigha?—Our bigha is one-fifth of an acre.

16409. What is the effect physically and morally on those who use opium?—It is very useful in cases of long standing disease. It is useful to children and to aged persons.

16410. What sort of people eat opium in Jubbal?—Every class of people.

16411. Do they eat it habitually every day?—Children are given opium from the time they are two years of age

The witness withdrew.

SARDAR BAHADUR JOWALA SINGH, SARDAR BAHADUR HARNAM SINGH, EX-RISALDAR SARDAR WAZIR SINGH, AND SARDAR PARTAP SINGH, called in and examined (through an interpreter).

16419. (Sir James Lyall to Jowala Singh.) How many villages have you?—I have three villages altogether, and shares in two villages.

16420. I believe you come from Jhanauli?—Yes.

16421. You represent one of the families known as the thirty-four houses?—Yes.

16422. Are you a Durbari?—Yes.

16423. And you are also a Magistrate?—Yes.

16424. (To Harnam Singh.) You are a Jagirdar of Kharar?—Yes.

16425. How many villages have you got?—Twelve villages; eleven wholly and shares in one.

16426. You are also a member of one of the thirty-four great families?—Yes.

16427. Are you a Durbari?—Yes.

16428. And are you an Honorary Magistrate?—Yes.

16429. (Partap Singh.) You are Jagirdar of Miyanpur?—Yes.

16430. And also a Provincial Durbari?—Yes.

16431. What family do you come from?—I am one of the thirty-four houses.

16432. Are you an Honorary Magistrate?—I am Sub-Registrar.

16433. (To Wazir Singh.) What is your family?—I am related to the ruling family of the Kapurthalla State.

16434. What regiment did you serve in?—The 1st Central India Horse.

16395. Do you think the men who cultivate poppy in your country use opium at all?—No, they do not.

16396. Are there any people in Bushahr who use opium much?—There are not many persons who take it in excess.

16397. Do the people who do eat it take it for medicinal purposes or as a luxury?—Some take it medicinally and others who are addicted to it take it otherwise.

16398. How many grown-up men in a hundred use opium?—About 5 per cent.

16399. Do you think that if poppy cultivation were prohibited compensation should be paid to the cultivators?—I think some compensation would be due to them, because their whole living depends upon it. It is a very valuable crop,—it is the most highly profitable crop; there is no other crop which pays them so well. All their needs are supplied from the proceeds of poppy cultivation.

The Tika Raghunath Singh.

16 Jan. 1894.

Lala Bhagwan Dass.

up to three years of age. Persons suffering from diseases take it habitually and profit by it.

16412. In Jubbal do any people take it for enjoyment?—Hardly any people take it in Jubbal for enjoyment.

16413. What would people think of an order prohibiting poppy cultivation?—They would be very displeased.

16414. If it were prohibited in British India, would it be fair to extend the prohibition to your place?—It would not be justice, as its use is an ancient one. It comes down from the time of the old kings,—from the remotest Hindu periods.

16415. Supposing the British Government stopped the cultivation in its own territories and prohibited the import from the Hill States into British India, would there be any claim for compensation in your opinion?—The Government ought to pay compensation, and that compensation would not be for a number of years only, but for ever.

16416. (Mr. Wilson.) Do you say that opium has a good effect physically and morally on those who use it?—Yes, it benefits them.

16417. Do you also say that if the tax be increased people will use it less for non-medical purposes?—They will take it in less quantities.

16418. Why do you want them to take less of that which has a good effect physically and morally?—It is not good to take even a useful thing in excess.

Sardar Bahadur Jowala Singh, Sardar Bahadur Harnam Singh, ex-Risaldar Sardar Wazir Singh, and Sardar Partap Singh.

16435. (To Jowala Singh.) What is the disposition of the people in India with regard to the use of opium for non-medical purposes?—The people generally use opium in this country in small quantities. They either use it on account of disease or for intoxication. The people by using it are generally saved from the attacks of severe diseases. It is especially useful for the old for *naizla*. It prevents hair turning grey, and opium-eaters generally are said to live long. It is most useful to those who become fat from phlegmatic diseases. It strengthens the body and is useful to sight. To those who use it for intoxication it is cheaper and more useful than wine, as wine is dearer and its intoxication is not so lasting as that of opium, which lasts for 24 hours. In the time of the Sikh rule therefore opium was given in times of war instead of wine. From that time the Sikhs are addicted to it. Liquor is considered more objectionable than opium. If its use is prohibited those who are in the habit of taking it will suffer in health and probably be at the risk of their lives. Of course its use if taken in ordinary doses is useful. Excess even of useful things is injurious to health.

16436. By the word intoxicant, do you mean exhilaration?—Yes. Opium does not effect the intellect appreciably; it does not make a man senseless.

16437. Would the people bear in whole or in part the cost of prohibitive measures?—The people will not be willing to make up the loss from other sources, because in that case the people generally will have to bear the loss, while in the present case only the opium-eaters suffer. The people will feel it hard if those also who do not use it are

Sardar Bahadur Jowala Singh, Sardar Bihadur Harnam Singh, ex-Bisaldar Sardar Wazir Singh, and Sardar Partab Singh.
 16 Jan. 1894.

made to pay for its loss. They will not like this action of our benign Government.

16438. Do you all agree with this evidence?—We do.

16439. You are all gentleman living in villages and not in towns?—Yes, we live in villages.

16440. Do you all come from Umballa district?—Yes.

16441. Do many people in the villages in Umballa use opium?—About 20 or 25 per cent. of the grown-up population in the villages of Umballa district consume opium.

16442. (*Mr. Fanshawe.*) Are the views which you have expressed the views which so far as you know are generally held by the Sikh jagirdars and the men in your position in the Umballa district?—We all hold these views. We further add that these views are not only held by the Sikhs but by other classes of society in this district, Rajputs and others.

16443. (*Mr. Haridas Voharidas.*) Do any of you take opium?

(*Partab Singh.*) I used to take alcohol first in large quantities; and giving up its use altogether I have substituted opium for it. I take three grains per day.

(*Wazir Singh.*) I take two grains of opium per day. I was suffering from diarrhoea during the Kabul Campaign, and to avoid its effects I began to take opium.

(*Jowala Singh.*) I do not take opium. The great Guru of the Sikhs used to take opium. In his book the Gurulas he has permitted its use for medicinal purposes. The cultivators derive great profit from the cultivation of the poppy, and they are not put to great trouble in its cultivation. The cultivators had to work harder in the case of sugarcane crops. The opium crop ripens in four months, and allows of another crop being sown on the same land in the same year; but the sugarcane crop does not permit of the cultivation of another crop in the same year on the same land. People can take it in case of necessity such as in war.

(*Harnam Singh.*) I do not take opium. The great Guru says that opium may be used in cases of necessity, such as war and on journeys and in cases of disease and fatigue.

16444. (*To Wazir Singh.*) How many years have you taken opium?—I began to take it in 1880.

16445. Have you been in the habit of taking the same quantity since you commenced?—I have neither decreased nor increased the quantity of my dose.

16446. How old are you?—I am 47 years of age.

16447. (*To Jowala Singh.*) How old are you?—55.

16448. (*To Partab Singh.*) How old are you?—I am 46 years of age.

16449. (*To Harnam Singh.*) Is it within your own knowledge or experience that opium has been used to prevent or cure fever?—In the Punjab opium is not used either to prevent fever or to cure it; but it is used for colds, rheumatism, catarrh, headache and for diarrhoea. It

is also used for coughs and to prevent any effects in cases of change of water.

16450. (*Mr. Wilson to Jowala Singh.*) You say "In the time of the Sikh rule opium was given in times of war instead of wine." What do you mean by that: what advantage is it to have intoxication lasting 24 hours?—Opium is useful for preventing lassitude. It encourages the consumer, and he is ready at his officer's call.

16451. Does opium in large quantities ever reduce a man to such a condition that he is not fit for anything?—It does if taken in large quantities.

16452. What is the word in your language which is used for being reduced to a condition of body in which a man is fit for nothing and cannot do his duty?—*Nakammi*.

16453. (*Mr. Wilson.*) How is it expressed in English?—(*The Interpreter.*) It is something stronger than incapable.

16454. (*Mr. Wilson to Jowala Singh.*) Does a man get into the condition of being incapable and helpless if he takes opium in considerable quantities?—Yes, the excessive use of opium makes a man fit for nothing.

16455. Does that often happen in this part of the country?—He who takes it in excess becomes incapable. The number of such persons is very few, one or two in a thousand opium-consumers.

16456. Will two rattis produce exhilaration?—It does. Even one ratti produces exhilaration. Even a very small quantity can produce exhilaration, much less than one ratti.

16457. Does the exhilaration produced by one ratti last 24 hours?—It does.

16458. If opium is so very good, why do not you take it yourself?—My mother advised me to take a small quantity, less than one ratti; but I have not yet taken to its use though I intend to take to it very shortly. I have not been weak yet.

16459. (*To Harnam Singh.*) Why have you not taken opium?—I have no necessity for it.

16460. (*Mr. Wilson.*) Do these two gentlemen encourage their sons, who may be from 20 to 25 years of age and in perfect health, to take opium.

(*The Interpreter.*) They say they do not encourage it unless there be some special cause for its use.

16461. (*Chairman to Jowala Singh.*) You say that the people in this country ordinarily use opium in small quantities?—Yes, about 25 per cent. of the population.

16462. Used in small quantities you think it is beneficial for many purposes?—Yes.

16463. When used in excess it does harm?—Yes, it does harm like every other thing.

16464. (*Mr. Haridas Voharidas.*) Can you tell me the percentage of females who take opium?—About 5 per cent. of the females take it. They take it for infirmity or suffering or for some disease.

The witnesses withdrew.

Sardar Partab Singh.

SARDAR PARTAB SINGH called in and examined (through an interpreter).

16465. (*Sir James Lyall.*) I believe you are a resident of Alawalpur in Tahsil Jullundur of the Jullundur district?—Yes.

16466. You are a Jagirdar and President of the Municipal Committee?—Yes.

16467. What do you know about the use of opium?—Rajputs, Jats, Khattris, Banias, Brahmans commonly use opium, say one in every four, especially Sikhs, and most of all men in service. These last eat it as it enables them to endure exposure and fatigue without injury, and protects them from the effects of bad water and climate.

16468. What is the feeling of the people with regard to its use?—All who use opium would immediately become ill if its use was stopped. Such an order would be generally resented. They would give up alcohol or tobacco, but not opium.

16469. Is opium produced in your villages?—The poppy is cultivated to a small extent; but only for the sake of poppy-heads (*post*). Opium is not produced in the neighbourhood.

16470. Would the people be prepared to bear any part of the cost of prohibitive measures?—The people already

have great difficulty in paying the taxes. If you first stopped their opium so that they died, and then increased taxation, who would be content?

16471. Do the Sikhs of the Jullundur district eat opium as much as the Malwai Sikhs?—I do not know much about the Malwai Sikhs.

16472. Do the Sikhs in your part of the country use alcohol?—They take opium as well as alcohol.

16473. Is the taking of alcohol thought to be prohibited at all by their religion?—It is considered as prohibited.

16474. But still the people do use it?—Yes, people do use liquor.

16475. Is opium considered as prohibited?—Opium cannot be said to be prohibited by the Sikh religion as our Guru himself took it.

16476. (*Mr. Pease.*) We were told by a witness this morning that the habit of drinking (*post*) is very injurious to health: do you agree with that view?—I am of the same opinion.

The witness withdrew.

MR. SHABAZ KHAN called in and examined (through an interpreter).

Mr. Shabaz
Khan.

16 Jan. 1894.

16477. (*Sir James Lyall.*) You are a resident of Hulwara?—Yes.

16478. Are you a Rajput?—Yes, I am a Lumbardar and headman in my village.

16479. And you hold muafi?—Yes.

16480. You are of the Manj gôt?—Yes.

16481. How many villages belong to the people of that gôt?—8 villages. There are several other villages of this gôt in other districts.

16482. Is the habit of opium-eating common in your gôt?—Yes.

16483. Do you think it does the people good?—There is great benefit to be derived from eating opium. It is a remedy of much virtue in catarrhal affections. It is given to children also. I have eaten opium twice a day for 30 years, morning and evening, and I have never increased my quantity, but take the same now as I did 30 years ago.

16484. What quantity do you eat?—Three or four rattis a day.

16485. What would be thought of prohibition?—It

would be a great distress for the whole world if opium were prohibited.

16486. Do you think that opium does any good to peoples' eyes?—Yes, it does good to one's teeth as well as to one's eye-sight. I am 70 years of age and my eye-sight and teeth are intact.

16487. Is that the common opinion of the country?—The whole country is of that opinion.

16488. (*Mr. Wilson.*) Do most of your friends take opium?—Yes, they do.

16489. All of them?—All are not habitual consumers, though they take it occasionally in cases of fatigue.

16490. Do you recommend young people who are in good health to take it?—I would take it myself when I suffer from colds and chills and other things.

16491. Would you recommend a young man who was not suffering from anything at all to take opium habitually?—I would advise him to take to its use when he is 30 or 40 years of age, but not before.

16492. (*Mr. Fanshawe.*) For what reason did you begin the opium habit yourself?—I suffered from diseases of the teeth and catarrh and cold.

16493. And this led to your beginning the habit?—Yes.

The witness withdrew.

MR. RAM SINGH AND SARDAR THAKURA SINGH called in and examined (through an interpreter).

Mr. Ram
Singh and
Sardar
Thakura
Singh.

16494. (*Sir James Lyall to Thakura Singh.*) You are a resident of the Ludhiana district?—Yes.

16495. You are zaildar, headman, over a great many villages?—Yes, I am headman over 11 villages.

16496. (*To Ram Singh.*) Who are you?—I am a Lumbardar of the Ludhiana district.

16497. You are the headman of the village?—Yes, I am headman of one village.

16498. (*To Thakura Singh.*) Do the people of your district generally use opium?—Yes.

16499. Do they use it for medical purposes, or for non-medical purposes?—They use it for removing fatigue and for medicinal purposes.

16500. Is it given to children?—Yes, it is given to children.

16501. For what purposes?—As a safeguard against diarrhoea and sores, coughs and other diseases. It is a preventive against several diseases.

16502. Is the non-medicinal use thought to be injurious?—It is considered useful in certain cases such as fatigue and for change of climate.

16503. What would the people think of the prohibition of its use?—They would be very unhappy, and it would be a serious hardship to them.

16504. Would it lead to the consumption of any other intoxicants?—Yes, it would lead to an increase in the consumption of other intoxicants.

16505. What would the people think if in consequence of prohibition extra taxes had to be imposed?—They would be unwilling to pay additional taxation.

16506. To what gôt do you belong?—To the Bhangar gôt.

16507. Are many men recruited from that gôt?—Yes, very many.

16508. Have many gone to Burma?—I am not aware of it.

16509. Do those who go to serve in the army use opium?—Most of them do.

16510. (*To Ram Singh.*) Have you heard what Thakura Singh has said, and do you agree with him in what he says?—Yes, I am of the same opinion.

16511. Is there anything else you would like to add?—People have not lighted their houses ever since this news has been heard that prohibition is in contemplation, they have been in mourning ever since they have heard that prohibition is in contemplation. They have not cooked their meals to show that they are very sorry for it.

16512. (*Mr. Mowbray to Ram Singh.*) Do you eat opium yourself?—I eat one massa or fifteen grains of opium a day.

16513. (*To Thakura Singh.*) How much opium do you take?—I take three rattis a day—between five and six grains.

16514. (*To Ram Singh.*) What is your age?—I am 70 years of age.

16515. How many years have you taken opium?—I have been using it for the last 35 years.

16516. Do you take much more now than you used to?—I commenced with 2 rattis, and I continued taking 2 or 3 rattis only; but subsequently as I was suffering from rheumatic pains and found relief by the use of a larger quantity of opium, I began to take one massa, and I have continued since to take one massa a day.

16517. (*To Thakura Singh.*) What is your age?—I am 39 years of age. I have been taking opium for 22 years. I have taken the same quantity throughout—between five and six grains.

16518. (*Mr. Wilson to Thakura Singh.*) Would you recommend your son or any other young man who is in perfect health to take opium habitually?—I would not recommend it.

16519. (*To Ram Singh.*) Would you recommend your own son or any other young man who is in perfect health to take opium habitually?—I would not recommend it, provided he was in good health, as no one in good health takes opium habitually though he takes it on occasions when he has to do a large quantity of work.

The witnesses withdrew.

MISER LALLA RAM called in and examined (through an interpreter).

Miser
Lalla Ram.

16520. (*Sir James Lyall.*) I believe you come from the Umballa district?—Yes.

16521. In how many villages do you own land?—In 13 villages.

16522. You do not own the whole 13, I presume, but you own land in each?—I own villages entirely, a half in some villages, and in no village less than one quarter.

16523. What do you know about the cultivation and use of opium?—I own about 2,000 bighas khām in 13 villages and often have poppy cultivation. From my experience of 25 years I can say that no cultivation yields more than poppy, and requires less labour. Opium is taken by the people of this ilaka from half a ratti to one masha daily for bodily health. There are two classes of people. One has no religious objection to the use of liquor, the other has and uses only

Misr
Lalla Ram,
16 Jan. 1894.

opium. The opium-eaters are in the majority. It is proved by the religious books of Hindus that the use of liquor is objectionable, but against opium there is no objection. The people take it as a preventive and for phlegmatic and other diseases. To those above the age of 40 years it gives strength. It is given to children at the age of one month from one to two *chawal*. It keeps children in good health and makes them sleep, and thus enables the women to give good assistance in cultivation and domestic affairs. Of all intoxicants opium is the cheapest and has the most lasting effects.

16524. (*Chairman*.) Would the words "stimulants" express your meaning of "intoxicants"?—Yes.

16525. You use the word in the vernacular in the sense in which we use the word stimulant?—Yes.

16526. (*Sir James Lyall*.) What do you mean by the word?—It does not bring a person to exhilaration or intoxication or senselessness, but it removes disease and gives some little refreshment.

16527. (*Chairman*.) It fortifies the person temporarily?—Yes.

16528. (*Sir James Lyall*.) I believe you are a banker as well as a landholder?—Yes.

16529. Would the people be willing to bear in whole or in part the cost of prohibitive measures?—The people will

not be willing to pay for the loss, because there is nothing better than poppy cultivation to assist the zemindars in paying the Government revenue, and no other cultivation yields as much. The present arrangements should be maintained.

16530. Have you anything further to say?—Going over the returns of profit I have found that one acre of land yields a profit of Rs. 93 to the cultivators if they cultivate the land themselves. The Government revenue at this settlement was assessed on the basis of the large area of land under poppy cultivation. If that is prohibited, the assessment ought to be revised.

16531. In what tahsil do you reside?—Pipli.

16532. (*Mr. Wilson*.) What is the meaning of *Kham*?—It is a measure used in this settlement; it is a standard,—one-fifth of an acre.

16533. What is the meaning of the term *Ilaka*?—It is a tract of country.

16534. What is a *Chawal*?—One-eighth part of a ratti—one-sixteenth of a grain.

16535. Do people take opium to protect themselves against fever?—They do not.

16536. Do you know who translated this printed statement of yours?—No, I do not.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

At the Old Mess House, Umballa.

FORTY-EIGHTH DAY.

Wednesday, 17th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (*CHAIRMAN, PRESIDING*).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VECHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

BRIGADE-SURGEON J. H. CONDON called in and examined.

Brigade-Surgn.
J. H. Condon, England, and L. S. A., London?—Yes.
M.D.
17 Jan. 1894. list?—Yes.

16537. (*Mr. Wilson*.) You are an M.D., M.R.C.S., England, and L. S. A., London?—Yes.
16538. And you are a Brigade-Surgeon on the retired list?—Yes.
16539. What classes, races, or castes have you had experience amongst, and what special opportunities for observation have you had?—Convicts chiefly, and the knowledge one obtains during a practice of 34½ years in India. I have been 26 years Jail Superintendent, and 30 years Civil Surgeon. As Superintendent of the Jail, and Medical Officer also, the prisoners were continually under my observation; on admission they were examined as regards health and condition and then weighed; the same on leaving the jail. In a District jail, such as I had charge of, with an average of 300 prisoners more or less, there were of late years about two or three admissions a month of those addicted to the use of opium. Thirty years ago when I first had charge of a jail, the admissions were very rare. I speak from memory.

16540. How far is opium-eating or drinking prevalent amongst these classes?—Opium-eating is very common amongst those classes; chiefly amongst the poorer classes and amongst the small shop-keepers.

16541. In what parts of India have you had this experience?—As Civil Surgeon I was in the Bahraich and Gonda districts for six or seven years; and I have been in the North-West Provinces since 1868 up to the present time.

16542. In what districts?—In Cawnpore and for the last three years in Mussourie.

16543. Where were these jails to which you refer?—The jails were in Gonda, Bahraich, Cawnpore and Ghazipur. I was in Ghazipur Jail for a year. My chief experience has been in the Cawnpore Jail. I was there for over 21 years.

16544. What have you to tell us with regard to opium-smoking?—Opium-smoking is not common in the North-West. In the big towns it is getting common now. When I first went to Cawnpore, there was no opium-smoking there.

16545. Do you know at what age the habit is generally acquired?—I cannot say. "Amongst prisoners in the North-Western Provinces it is mostly found amongst middle-aged men. I cannot say at what age the habit was formed; they could not usually give any definite time: generally would say "many years ago."

16546. What motives induce people to form the habit?—I always examined these men myself, and I found that the habit was very often caused by the example of others—one man getting another fellow to come to have a smoke with him. When once they begin it, they cannot stop it. Then again there are the facilities offered for procuring the drug. Anybody could get it without any trouble. I have rarely found the habit contracted from using it as a medicine.

16547. Is the habit easily relinquished either at once or gradually?—No, it is not. The habit can only be got over

in the early stages; before opium had become so generally used as it is now, it was possible to save a man from its power, but gradually as years wore on, the opium-eaters admitted into jail were found invariably to relapse. Not very long ago talking to the *Darogha* of a jail in the North-West Provinces, I asked him if he found many of them reform after getting rid of the habit in jail, and he said, no, that formerly they used to; but now they all relapsed into their old habit on release. I do not believe it possible for a man to leave it off gradually: of course it is possible, but it is not possible voluntarily to the poor victim of opium; I never met a confirmed opium-eater or smoker that did not hate the habit, but the only cure any of them seemed to think of, as being of any use, was to stop the supply of opium.

16548. Is there a marked difference between moderate and excessive consumers?—Yes. After a while you cannot mistake the opium-consumer. He has opium written on his face, as you may say.

16549. Is there a general tendency to increase the dose?—Yes. That is a thing that everybody will admit. It is common. It is only a matter of time, as far as my experience goes. I have gone into the history of some hundreds of these men, during the time I was in charge of the jail. Unfortunately, however, I did not take much notice of it; but if I had known there was a Royal Commission coming, I would have taken more notice. My recollection is clear that they began with a little and gradually increased it up to the point where the wages that a poor man could earn were all consumed in opium.

16550. (*Sir William Roberts*.)—Are you speaking of opium-eating prisoners in the jail?—Yes. When they could not earn enough to supply the amount of opium they wanted they commenced thieving, and then they got into jail.

16551. (*Mr. Wilson*.) What are the results of the habit, physically, mentally and morally?—Physically, it reduces strength, though like alcohol it gives a sort of fictitious strength for a short time; after a time, varying with the amount eaten daily, they become emaciated and debilitated, miserable looking wretches, and finally die most commonly of diarrhoea induced by the use of opium; mentally they become dull and stupid and indolent, and unless a man was long enough in jail to shake off its effects, no jailor would think of trying to teach him a trade; morally, I think they are the greatest wrecks of all; they will commit any meanness, thieve and lie to any extent to get a couple of pice worth of opium. The rich man comes off much better, he can afford to buy opium, but the poor man buys at the expense of his and his family's food.

16552. In what proportion of cases are these injurious results apparent?—I think one-half begin to show it very quickly. My experience is, that it is only a matter of time. All break down. Ordinarily I should say about one-half show its effects, but it depends upon the feeding a good deal.

16553. In what way does it depend upon the feeding?—If a man is fed well, the system generally has more power to overcome the effects of small doses of opium.

16554. Do I understand your opinion is that about half of them show the effects very quickly?—Yes.

16555. But you think that ultimately nearly the whole of them get into the same condition?—They all get into the same condition: it is mostly a matter of time.

16556. Is opium generally believed to be a protective against fever?—I have never heard so. In the Oudh Tarai it was not used at all in my time (from 1863 to 1864). A man would come in forty miles for a few doses of quinine, but I was never asked for opium.

16557. Will you explain exactly the meaning of Tarai?—The Tarai are the jungles at the foot of the hills, where malarial fever is very common. The rotting of the vegetation there, and the very heavy dews, are a common source of fever in those districts. There is a very bad malarious fever up there; but I do not think it is so bad as it was in the old days, as a good deal of the jungle has been cleared off.

16558. Will you tell us whether, in your opinion, opium is in fact a protective against fever?—It has no reputation in the Tarai jungles as such; it is a pure narcotic poison, and neither opium nor any of its products which have been tried by Government, have had any prophylactic or other beneficial effect. We have tried narcotine and various other things which the Government have made in the Quinine manufactory at Darjeeling, and every medical man in the country has stopped using them. They are not a bit of use.

16559. Is it specially useful in malarious districts, or believed to be so?—Not the least. I do not know what it is in

Bengal, but certainly in the Tarai nobody ever thought of it, or used it.

16560. Is it necessary, or believed to be necessary, to enable working people to get through their daily toil?—I never heard of its being used for that purpose, though I know liquor is sometimes. It is almost entirely used for the same purposes as alcohol, and largely as an aphrodisiac.

16561. Is the habit of taking opium looked upon as disgraceful?—Yes. The term "*aphimi*" or "*aphimchi*" is much more disgraceful than that of drunkard, and in the jail, the "*aphimi*" is looked on with the greatest contempt by his fellow prisoners. That is a positive fact. I have seen it for years and years. A man will deny right and left that he has ever taken opium; and you only find it out when you stop his opium and he shows the effect of it.

16562. In your opinion does the existing system of granting licenses for the sale of opium tend to the spread of the habit or to its restriction?—Decidedly to the spread of the habit.

16563. Has the closing of the shops for the consumption of opium on the premises been fully carried out in the localities with which you are acquainted?—The opium dens in Cawnpore were closed about the time I left in 1891. A friend of mine was told by the contractor that he employed 62 coolie-runners in taking the opium pipes to his customers houses, and I believe it was true too.

16564. Does that statement of a friend of yours relate to what happened before 1891,—before these things were closed or after?—After they were closed.

16565. In consequence of their being closed, the coolie-runners were employed to take the pipes round?—Exactly so.

16566. You left Cawnpore about the time this new order came into operation?—Yes.

16567. You do not know much about what has occurred since then?—No, not personally. I might say that the closing of the shops has very little effect upon the eating of opium; it affects the smoking more.

16568. In your opinion are any, and if so, what, further measures required to give effect to the policy of discountenancing opium-smoking?—I do not believe in any policy, but one, being effective against opium, and that is, prohibition of the cultivation. Anything else is child's play against a habit which is spreading so rapidly.

16569. Is it desirable to prohibit the sale of opium except for medical purposes?—Yes, I should say it certainly is absolutely necessary.

16570. Do you think that public opinion in this part of the country would favour the adoption of such a measure?—I believe so. Every one under the power of the "*crave*" would be glad of it, and I have never spoken to one of them about it, that did not ask why we did not close the opium business and save them; many years ago I was told by three assistants in the Opium Department, that not more than a quarter of the area would be sown but for the Government action and the pressure put on in consequence. Some few years ago opium cultivation was stopped in, I think, five districts, and to my knowledge there was not a word of protest by the ryots against its being stopped—not a word was said in favor of its being continued. It was in the North-Western Provinces mostly.

16571. If such a measure of prohibition were adopted, would it be desirable to make special provision by establishing a register of opium-consumers for the wants of those who are already habituated to the use of the drug?—No. The sooner it is stopped altogether, the better.

16572. Do you think that would be difficult to arrange?—I do not think you could "*arrange*" it; and more than that, I do not think the people would want it themselves. Those who take very small quantities might like to continue it, but those who know that the habit is gaining upon them, would be very glad to have it stopped.

16573. Supposing anything of that kind were done, what class or races of persons should be entrusted with the sale for medical use, and under what conditions as to supervision or otherwise?—None but European and native chemists of good character, but to none should be given more than the average sales of the previous five years. It might be advisable to give something more to those who are living in far away parts of the country, but I would not give an unlimited supply of opium to anybody for sale. I should go on the average of what they have been selling for the past 5 or 10 years, and there

Brigade-
Surgn.
J. H. Condon,
M.D.
17 Jan. 1894.

Brigade- should be a certain amount extra for use amongst the
 Surgn. villages.
 J. H. Condon. 16574. Are the opinions you have given us specially your
 M. D. own, or do you think they would generally be shared by a
 17 Jan. 1894. large number of the native inhabitants of this part of the
 country?—I am only speaking of what I have seen myself.
 I think you will find that all those who are not interested
 in it themselves, will share my views.

16575. I do not mean to restrict it exactly to this part of
 the country; but have you had conversations with people
 at various times upon this subject, and do you think that
 what you have been saying to us would be acceptable or
 repugnant to the intelligent and sensible natives of the
 country?—I have never yet found a single one that did
 not agree with me that opium ought to be stopped al-
 together. That is their own idea about it. The only
 question in the minds now of the people where I live is
 that they would like to have it stopped, but they do not
 want any fresh taxes. That is the only thing. There is
 no question about wanting to have opium stopped. They
 would rather have it to go on than pay more taxes.

16576. That is how you would sum up respectable
 intelligent native opinion,—that they would like to have
 it stopped if it did not involve fresh taxation, but that if it
 did involve fresh taxation they would rather go on as they
 are?—Exactly so.

16577. (Sir William Roberts.) I think you said that in
 the jail you had charge of with an average of 300
 prisoners, there were two or three admissions a month of
 those addicted to the use of opium: could you tell me
 what percentage of prisoners that would form?—Not a
 large percentage. The jail does not accommodate long-
 term prisoners. The population of the jail is frequently
 changed. There would be a very small proportion who
 would be addicted to the use of opium. When you come
 to take the whole number, I should say not more than
 1 per cent.

16578. I think you have had charge of dispensaries?—
 Yes.

16579. In that capacity you would mix a good deal with the
 people, would you not?—Yes. We see a great deal of them
 in the dispensaries.

16580. Have you formed any idea in your mind what
 percentage of adults were in the habit of using opium?—
 There would not be a single morning in the Cawnpore
 Dispensary that one would not see *aphimis* coming in
 for medicine.

16581. What would be about the proportion?—I should
 say about 5 per cent. of the population.

16582. Opium-users of all sorts?—Yes.

16583. That is, 5 per cent. of the adults?—Yes.

16584. So that the proportion of prisoners was actually
 less than the proportion of the entire population?—
 Yes.

16585. You think that the habit of opium-smoking
 has rather increased as against opium-eating?—I think
 opium-eating has increased in the North-West: it has
 increased in a greater ratio than smoking has.

16586. There is no sign at all that the smoking habit
 is displacing the eating habit?—It is coming in.

16587. You have not ascertained, I suppose, from official
 sources whether there is an actual increase of opium-
 smoking in the districts that you have had experience
 of?—The only way we have of knowing that, is from
 the Government Blue Book which shows the amount of
 revenue received from opium in the country.

16588. You have not ascertained whether that does show
 an increase?—It shows a decided increase in the number
 that take opium.

16589. That is only an impression that you have gained
 in your experience?—That is what I have noticed as I
 have gone along year after year.

16590. That has been your impression?—Yes, my
 conviction.

16591. In giving us an account of the effects of opium,
 that physically it reduces strength, and that the people that
 become miserable wretches and so forth, are you speaking
 of moderate consumers of opium or persons who use it
 to excess—I mean beyond their tolerance of opium?—It
 does not affect them very materially as long as they confine
 themselves to small quantities.

16592. You mean two or three grains twice a day or
 something of that sort?—Two or three or four grains a

day. A man can stand a good deal of it if he is well fed;
 he will go on for years and years.

16593. I presume you, like other persons, have noticed
 that constitutions vary very much in tolerance of opium?
 —Yes.

16594. And that there is an immense difference between
 individuals in what they can bear without injury?—Yes;
 a great deal too depends upon the way a man lives.

16595. You mean to say that the opium habit with in-
 sufficient food is disastrous? There are two things at work,
 poverty and the opium habit: I should like to know as far
 as your experience has taught you, what you have seen of
 the effects from the opium habit carried to excess, pure and
 simple, independent of poverty and organic disease?—It is
 difficult to separate the two, because poverty is brought on
 by opium. A poor man only earning 2 or 3 rupees a
 month spends one rupee or sometimes more than that on
 opium. He debars himself and his family from food; and
 the thing that began the disease, re-acts and makes it worse.

16596. You cannot speak of your own experience of the
 opium habit on persons who get sufficient food?—I can tell
 you of one instance that I remember very well. It was the
 case of a man who had come into the Cawnpore jail. He
 was a poor, miserable-looking man, and appeared to be
 suffering from starvation. He was eating large quantities
 of opium. After I had got him rid of the opium-eating
 altogether in less than six months, he increased two stone
 in weight. He had no sign of any organic disease what-
 ever about him. From the time the opium was stopped
 he gradually went up until he was stout and able to work as
 well as any man in the jail.

16597. Had he been an excessive consumer of opium for
 many years?—No, he had not. He had gone into it very
 heavily from the beginning. I do not remember what
 brought him into jail,—probably some theft.

16598. Have you in your experience been able to trace
 organic disease to the use of opium?—It is difficult to say.
 One does not of ten have chances of *post-mortem* examina-
 tions. You cannot say what the result is always. I have
 had several cases of diarrhoea caused by opium which took
 some time to stop, when the opium was stopped: but they
 were suffering from it when they were eating opium.

16599. You have said that you never heard of opium
 being used in malarial districts as a help or preventive?—
 I never heard of it.

16600. Of course you are aware that in that respect
 your experience is widely divergent from that of other
 medical men?—I am quite aware of that.

16601. So that you are speaking of what has reached your
 ears?—Simply what I know myself to be the case.

16602. You are quite aware that Government supplied
 the most abundant principle of opium, *viz.*, narcotine, for
 years to the dispensaries for the express purpose of being
 used in combating malarious conditions?—Yes; it was
 given to us in large quantities. You will find bottles of it
 left unused in every dispensary. It is no mortal use.

16603. Have you yourself used opium in the treatment
 of malarial conditions?—Never.

16604. You never used it?—I never thought of using
 such a thing. I use quinine as a preventive, but I do not
 use narcotine poisons to prevent malaria.

16605. In the treatment of malarious diseases, diarrhoea,
 dysentery, and all the great variety of malarial conditions,
 have you used opium much to combat those conditions?—
 No, I never used it much, *i.e.*, I used it in small quantities.

16606. Then you have had no experience of the use of
 opium?—I have not needed it in malarial conditions.

16607. How can you speak as to its effect if you have
 not tried it?—I do not know about the effect of it in malaria
 but speaking of what we know opium to be, I do not see
 where the use comes in.

16608. You have not had any practical experience: you
 speak speculatively entirely?—I do not know about that.
 It was not used when I was in Oudh, but that is 26 years
 ago. It may have crept in there by this time.

16609. (Mr. Mowbray.) I should like to get from you
 exactly what your service in India has been. Did you come
 here in 1860?—In 1859.

16610. And for the first four years were you in private
 practice?—No. For the last three years I have been in
 private practice,—since I left Government employ.

16611. Kindly tell me exactly the time you were at these
 various places?—I was in Bahraich during 1862-63-64; I left

it towards the middle of 1865, and I was in Gonda until April 1866.

16612. Then I understand you went to Cawnpore?—No, then I went to Naini Tal for two years as Civil Surgeon. Then I was one year in Ghazipur; then I went to Cawnpore and remained there till I retired.

16613. You were about 20 years at Cawnpore?—Nearly 22 years.

16614. All your experience, I gather, has been in the North-West Provinces and Oudh?—Yes.

16615. Where are you in practice now?—Mussoorie.

16616. Is that also in the North-West Provinces?—Yes.

16617. You have told us that you never met an opium-consumer who did not wish to have the practice prohibited?—None of those who take it to excess. All want to get rid of it.

16618. Does your remark apply only to those who take it in excess who wish to have it prohibited?—Yes. Those who take small quantities do not want to give it up.

16619. In your experience of Cawnpore Jail did you find many prisoners who were addicted to the alcohol habit?—A great many of the lower classes.

16620. Would you make any comparison as to the numbers of those who were the worse for the alcohol habit?—I think they were more alcoholic.

16621. (*Mr. Fanshawe.*) You have said that the opium habit is spreading rapidly; do I understand that you found that conclusion upon your experience of jails chiefly?—No; I base that on dispensary experience. You meet them now constantly at the dispensaries. At first for years and years I never met them at the dispensary.

16622. Is it the case that you have never come across the use of opium as a domestic remedy for colds and rheumatic pains and so on among the people?—Not very much. I have never used it. It is used occasionally, but it is not used systematically.

16623. Have you come across its use among the people for colds and rheumatic pains and so on?—It is very common amongst them where there is any pain. They will take it for any kind of pain whether it does good or not.

16624. There is a common use, then, of opium as a domestic remedy amongst the people themselves for those classes of pains?—You will find it very common where there is pain.

16625. You have referred to a darogha of a jail: can you kindly give us the English equivalent?—The darogha is a native name: he is the Jailor.

16626. You said that a Jailor informed you that many persons, who were obliged in jail to give up the opium habit, relapsed into their old habit on being released. How would he be in a position to know what released criminals did?—Numbers of them come back a second time.

16627. You mean that his statement was founded on his knowledge of such of them as came back again into jail?—Yes; and also from his living in the same place. He could tell whether so and so had gone back again or not.

16628. But men would go off to all parts of the district?—My experience is that it is in the large towns that the opium habit is spreading, and in Cawnpore itself more than anywhere else.

16629. You are mainly speaking of your knowledge gained in Cawnpore city?—Yes.

16630. You have said that you were told by three assistants in the Opium Department that it was Government action that had led to the cultivation of poppy: what do you understand by Government action?—The Government ordering that it was to be produced.

16631. Do you think that the Government order is what led to the cultivation, or was it the advances?—When Government orders it to be sown and the order goes out amongst these villages that it must be, it is done.

16632. (*Sir James Lyall.*) I think you said that in the Oudh Tarai opium was not used?—Yes.

16633. Is it not a fact that the people who live in the Oudh Tarai are great consumers of alcohol?—I only know of one class, that is the Tharus. They are great drunkards.

16634. They are able to live in the most malarious parts?—I do not know. It is all bad as far as that is concerned; but they in particular are a very drunken lot. They consume large quantities of alcohol. They occupy the Nepai Tarai and the English Tarai.

16635. I believe you belong to a Temperance Association?—I have been a teetotaler for the last 25 or 26 years.

16636. And I suppose it is since then that you have directed your attention particularly to the subject of alcohol drinking and opium-eating among the population?—No, it is not. I have always been against it, even before I was a teetotaler. I have seen a great deal of it at home. I had a good deal to do in the back slums in Dublin, and I saw what liquor used to do there. From the time I was a student I took a dislike to it. Out here I have always asked about it when a patient comes in, whether he drinks much; and I get a good idea of what their habits are in that way.

16637. You said you had been talking to respectable natives where you live, and that they are all in favour of prohibiting the use of opium except for medical purposes?—Yes.

16638. That refers I suppose to Mussoorie?—No; it refers to the Dun.

16639. In the Dun and in the hills generally the people are not much in the habit of using opium, are they?—I do not know.

16640. One witness has told us that in these hills it is not used at all?—You do not hear from the servants who live up there that they eat opium.

16641. If you take the natives in that part of the country where the use of opium is practically not known, their opinion will hardly present the opinion of India generally will it: it certainly would not represent the opinion of the Punjab where there is a large consumption?—One of the men I spoke to was a Bengali. He was a well educated and very intelligent man. We had a good long talk about it, and he gave me his opinion very freely about it. He was about as much opposed to it as any of them.

16642. You cannot speak in any way as to the opinion in this particular part of India?—No; I do not know anything about the Punjab. I never was in it but once until to-day.

16643. In answer to a question as to how you had come to the opinion that the number of consumers was increasing, I think you said you understood that there had been an increase of revenue from opium?—Yes, according to the Government books.

16644. Increase of revenue is quite consistent with no increase in the number of consumers if the price is raised?—You might increase it a little in that way, but you would not increase it at the tremendous rate it has gone up in the last few years. It has gone up from 103 lakhs to 525 lakhs. That is taken from the Government records.

16645. That is alcohol and everything put together?—Alcohol and opium and *ganja* and those things; but *ganja* is a very small thing; it does not bring in much money.

16646. Is that for all India, or for the North-West Provinces?—All India.

16647. I came to the Punjab about the same time as you did. Then one could get a bottle of liquor for less than two annas, and the price had been even cheaper under the Sikh Government. Later the price has been 12 annas to a rupee per bottle. An increase in price of that kind would explain, would it not, a very large increase of revenue without any increase in the number of consumer?—I do not think so.

16648. If you increase the price six or seven times, surely you do not want an increase in the numbers to explain an increase in revenue, do you?—No; but if you increased it like that you will find your consumers would drop off. A poor man earning six pice a day cannot afford to pay four annas for a bottle of liquor.

16649. My point is that we have increased it to that extent, and that would point to a decrease in the number of consumers and not to an increase, would it not?—It would certainly. It would not point to an increase of drink, but it would point to a decrease.

16650. You assume an increase in the number of consumers merely because the revenue has increased?—Taking all three together, I do. The price of opium has not increased, and the price of *ganja* has not increased; and the price of liquor has only increased for a short time during that period.

16651. But the price of opium has increased in those places?—Nothing very much I think; I am not sure about it.

Brigade
Surgn.
J. H. Condon,
M. D.
17 Jan. 1894.

Brigade-Surgn. 16652. (*Chairman.*) In your statement to us giving the results of your experience of the opium habit you have referred mainly to the experience you had acquired when having medical charge of prisoners in jails?—I referred to those principally because I could work out their cases from beginning to end. I have seen a great deal of it outside. I mention those because I could watch them and form an opinion as to the effects of opium on the system and constitution. I used to have them up before me every morning and inspect them; and I suppose 99 out of every 100 would put on weight before he had been in a month, after the opium was stopped.

16653. We should not consider in England, and I presume it would be the case in India, that prisoners in jails should be taken as average representatives of the conditions which obtain in the population generally?—No, I said that these prisoners were men who had got to be excessive consumers and had been led into the jails simply through that, spending all their money upon opium and then stealing.

16654. At home convicts represent to a very large extent the mischievous effects of indulgence in alcohol, and perhaps nothing is a more fertile cause of crime and imprisonment than drunkenness. Might we not expect to find in India that the opium habit would have a more generally mischievous effect over the class which was confined in jail than the population generally outside?—I do not think so.

16655. You do not consider the indulgence in opium is a special cause of crime?—No; the effects of opium are very different from those of alcohol; they do not tend to bring on crime.

16656. (*Mr. Pease.*) You would very decidedly advocate the reduction of facilities for the purpose of opium?—Yes, I would. If you cannot abolish it altogether, I would reduce it to a minimum.

16657. (*Mr. Wilson.*) You were asked some question, the reply to which I do not entirely understand, about the proportion of opium-consumers in the jails and among the general population: what I understood you to say was that you thought the proportion of opium users in jail was smaller than the proportion of opium-users in the general population?—Yes.

16658. You have said that they would commit any meanness to thieving and lying. How do you account for the fact (it seems at first sight strange) that the proportion of opium-consumers in jail is smaller than that of the general population outside?—You get no opium-users in jail except those who come in for crime, and generally for crime committed through want of opium.

16659. That seems to me to make it more difficult still to understand.—You have got all the people outside using it, but they do not commit any crime; they can all buy it themselves, but here and there a man will have no money and he will go and commit theft, and he gets into jail for it. Opium is not at all conducive to crime in the sense that liquor is.

16660. We have had some evidence before that opium seldom or never leads to violent crime, but that it leads to petty thieving?—That is my experience.

16661. Since you left Cawnpore have you been practising your profession?—Yes.

16662. You have expressed yourself very strongly in reference to opium. You say you have not known it used as a preventive or remedy for fever?—That is so.

16663. Are you aware that a great deal of evidence has been given before this Commission in a contrary direction?—I do not know what they may do in Bengal, but up here it is not known.

16664. I am asking whether, as a matter of fact, you know that a good deal of evidence has been given before this Commission that it is largely used as a protection against malaria?—I think I saw that one of the Calcutta men said so, but I did not take any particular notice of it.

16665. That doctrine is quite new to you?—It is quite new to me.

16666. You also said that you had no experience of the use of opium in such cases?—No, I never use it.

16667. Do I understand you to mean by that that it never occurred to you to try it for that purpose?—It appears to be the opposite thing to what one would require in cases of that kind.

16668. In discussing such matters with your professional brethren from time to time, with whom you would meet probably in consultation and so forth, you have not heard that before?—I have never heard of one of them propose to give opium in the case of fever,—never. If I do not mistake, however, I think I did see in the evidence of two or three Calcutta men that they never gave it themselves to their patients for fever.

16669. You said also that you had known persons come forty miles for a few doses of quinine, but you were never asked for opium; might it not be the case that people had the means of getting opium without going a distance for it but were obliged to go a long way for quinine?—I remember making inquiries about it at the time. There was scarcely any opium used there. It was close under the hills. The hill men do not use it as a rule; and these men were taking after them.

16670. (*Sir James Lyall.*) You say you are in favour of much stronger restrictions on the supply of opium; have you at all thought out how the supply of opium is to be restricted?—I have not thought much about it. My own idea would be to restrict its sale to men who know its use, and who know the proper doses to give.

16671. To medical men?—To properly educated chemists, native or English,—good characters. You cannot trust the poorer classes of natives with it.

16672. By native chemists do you mean native druggists, —panaris?—No; I would have regularly educated men. I would not do as we do with quinine, give it to the post offices for sale so that any man could buy it. I would have it given to professional men who would give it for disease.

16673. Men trained in the European system?—Yes, men trained more or less in the European way. Most of our native doctors are very well educated compared with what they used to be when I came out. A good many could be trusted with it, but you cannot trust them all.

16674. If the use of opium was cut off and these native and European chemists had the monopoly, they would be under great temptation, would they not, to make a trade of it?—Yes, of course they would. But I would not give them an unlimited supply to make a trade of it.

16675. How would you fix the supply?—I would take the average of what they had been using for medicine for the previous five years.

16676. At present, seeing that there are licensed vendors all over the country at certain intervals, the people are not forced to go to chemists, European or Native, for their opium,—they get it from the licensed vendors; the consequence is that chemists, Native or European, probably deal in it very little?—In that way there is difficulty. The poorer classes will all go to the native men to buy their opium, but they can buy it unrestricted almost. A child can get enough to poison a dozen men without a question being asked.

16677. I am asking about your proposed system?—I would have a register kept and every name kept; and have it inspected and inquired into just the same as vaccination is done now.

16678. You allow that opium is largely used as a domestic medicine against all sorts of pain?—I do not think it is very largely used.

16679. I thought you admitted that in reply to Mr. Fanshawe?—It is largely used, simply as we use alcohol; just that and nothing more.

16680. I thought you told Mr. Fanshawe that it is largely used by natives as a domestic remedy for all sorts of pains?—It is not very largely used. It is generally known to be a remedy for curing pain, and it is taken; but it is not taken largely. There is no disease, for instance, like fever entailing very much pain which would drive them to the shop. My experience has been that most of those men take it under the influence of their comrades.

The witness withdrew.

Babu MURLI DHAR called in and examined.

Babu Murlis Dhar. 16681. (*Mr. Pease.*) You are, I believe, a Pleader in Umballa City?—Yes.

16682. Among what classes have you had experience with regard to this opium question?—I have had experience

amongst all classes in this city and neighbourhood, where I have lived for more than twenty years.

16683. In what classes is the consumption of opium most prevalent?—Opium-eating is prevalent among the Jat Sikhs

and the lower classes of Mahomedans. Opium is generally administered to infants of all classes, especially amongst the labouring class, to keep them quiet whilst their parents are at work.

16684. What experience have you had as to opium-smoking?—Opium-smoking is not so prevalent, but there are many cases; and opium-smoking dens exist in the city. I was not aware of the existence of these dens until lately. I visited these dens in company with Mr. Evans about four or five days ago. I made enquiries and found that these dens existed in the heart of Umballa City. I went to these places and saw a lot of opium-smokers there.

16685. What classes of people did you find?—I saw generally Mahomedans; they were almost all lower class Mahomedans.

16686. Did you notice what effect the smoking had?—They were simply horrible to look at. They were haggard, lean and pale, their eyes were rolling, and they seemed to me like maniacs—some of them at least.

16687. How many people were there in these places?—There were not many, because we saw these dens in the morning, and the people congregate generally in the evening.

16688. What is your opinion as to the effect of opium?—Opium, when taken in excess, is always deleterious. When taken in small doses it is not so injurious, and perhaps in some cases beneficial, as when a man is suffering from cold and cough, and in cases of dysentery. Opium-smoking is always injurious.

16689. Do you know whether opium is considered to be a protection against fever in the Punjab?—No, not to my knowledge. In this part of the Punjab opium is not generally believed to be a protective against fever.

16690. Is it considered a disgrace to be an eater of opium?—The habit of opium-eating is not considered disgraceful, except when it is used in excess. I am totally opposed to opium-smoking in any form. I believe that public opinion would favour the adoption of a measure prohibiting the retail sale of opium for other than medical use, provided special provision were made, by means of a register of opium-consumers, for the wants of those who are already habituated to the use of the drug, and if the people were assured that no fresh taxation in any form would be imposed. I consider that the loss of revenue would be amply compensated by a reduction of military expenditure, and the larger employment of natives of India in the public service. I think that a Royal Commission to stop the sale of drink, and one to enquire into the grievances of the people in India, would be hailed with joy by the people of this country.

16691. Do you think there are many persons in Umballa who are suffering from the excessive use of opium?—There are many people. I cannot exactly tell their number, but I have known many cases.

16692. Do you think there is a tendency on the part of those who take opium to keep on increasing the dose?—Not generally.

16693. (Mr. Moubray.) With regard to these opium dens: you are aware that they were not licensed premises which you saw where you say this opium-smoking was going on?—No.

16694. You are a Pleader?—Yes.

16695. Could you suggest to me as a lawyer any way in which those unlicensed dens could be stopped?—If you could make it penal to keep these dens, they can only be stopped in that way.

16696. I quite agree with you, but how would you define a "den"?—It might be made, an unlawful assembly, and the members of that unlawful assembly shall be punished by law; more than 5 persons congregating together.

16697. That is your idea?—Yes.

16698. An assembly of more than 5 people smoking together should be made an unlawful assembly, and the people punished by fine or imprisonment?—Yes, I think a fine would do for the first offence.

16699. Are there any people in the city of good position who smoke?—No.

16700. What sort of places are these dens?—I visited three or four places. There are two or three shops with a small thatched roof over them.

16701. How many people do you think could be accommodated?—I think about 50 people could be accommodated in that compound. Each place would accommodate about ten persons.

16702. They were all about the same sized places?—Yes. These are shops for the sale of sweets and bread, and the occupiers of these shops have made it a profitable business. They allow the people to come into their shops and there they smoke opium. When they are questioned about it, they say it is a common shop for the sale of sweets.

16703. Did you enquire where they got the stuff from which they were smoking?—They prepare it. They bring opium and make it into *chandru*, and there they smoke.

16704. The people bring their own opium, do they?—No, not the people, but the owner of these dens.

16705. Does he give it to the people who come to smoke?—Yes.

16706. How does he make a profit out of it?—The smokers pay him.

16707. Do they pay for permission to come in?—For permission to come in to stop there.

16708. Does he make a present of the smoking mixture?—I think he does a roaring trade.

16709. Do you know whether there has ever been an attempt to prosecute the owners of these dens?—No. The authorities did not seem to know of the existence of these dens.

16710. (Mr. Haridas Veharidas.) I believe you follow the Hindu religion?—Yes.

16711. Is alcohol expressly prohibited by the Hindu religion?—I think it is.

16712. If opium is stopped altogether except for medical purposes, do you not think that people will take to drinking alcohol?—Some people might take to drinking alcohol; but I hardly believe that opium-eaters would immediately take to drink.

16713. Would you like Hindus and Mahomedans to use alcohol more than opium?—No, certainly not; it is worse than opium.

16714. You would not like to stop the use of opium if the use of alcohol is to be increased?—I would like to stop opium in any form whether alcohol is stopped or not. I would like also to have drink stopped altogether.

16715. Do I understand that you would like first to put a stop to the use of alcohol and then opium?—I would like to stop them simultaneously.

16716. (Mr. Fanshawe.) How many of these smokers that you saw in the dens presented the emaciated appearance you have described: was it a large proportion of the total number that you saw, or a small proportion?—A large proportion.

16717. I suppose in the morning only the people specially addicted to the habit would be found in those shops?—Yes.

16718. Will you explain what you mean when you say that the habit of eating in excess is considered disgraceful: what do you mean by "disgraceful"?—They are called *Aphimis*. That is rather a term of contempt.

16719. The people look on excessive opium-eating with contempt, that is what you mean by disgraceful?—Yes.

16720. (Sir James Lyall.) Are you a native of Umballa?—No. I was not born in Umballa, but I have lived here for the last 20 years.

16721. Where is your original home?—I am an inhabitant of Palwal, in the Gurgaon district.

16722. What are you by caste?—Vaish or Bania.

16723. I think you have been one of the earliest Congress delegates from the Punjab?—Yes.

16724. Is it because there is a division of opinion, or what is the reason that the Congress has not taken up this question?—The Congress considered drink to be worse than opium, and therefore it was not thought necessary to take up this question particularly.

16725. How did the idea of registering opium-smokers occur to you?—Some of the consumers came to me crying thinking I was going to give evidence, and they asked me not to stop their opium altogether. I thought, if opium were stopped altogether, it would be a hardship upon those people who were addicted to it, and I thought they might be allowed indulgence in that direction to be given to them.

16726. In the Punjab the Jats, Sikhs and the leading people in the rural part of the country are considerable opium-eaters, are they not?—Yes. They are.

16727. They would think it a great disgrace to have to come in and apply to be registered as *Aphimis* would they not?—All of them do not take it in excess. My

Bahu
Murti Dhar.
17 Jan. 1894.

Babu
Murlī Dhar.
17 Jan. 1894.

remark applies only to those people who take in excess. I would not apply the term to those men and women who take it in moderation.

16728. Would you register only those people who take it in excess, or would you register all moderate consumers: what kind of register was it you had in your mind?—I had in my mind a register of persons who take it in excess.

16729. What would you call excess?—More than a grain.

16730. There are very few consumers who do not take more than a grain. Would you make all those respectable ladies in the zenana and all the respectable Sikh gentlemen, and others who take more than a grain, apply to the Magistrate to be put on the register?—In the interests of those people themselves I think it is absolutely necessary. I think opium is deteriorating the Sikh race. The jagirdars have deteriorated very much of late by the excessive use of opium and drink as well. They are idle people and have nothing to do. They must waste their lives either in taking opium or drink. I know many rich families who have been jagirdars, but who have been ruined by drink.

16731. You think it necessary that everybody who takes more than a grain should be registered?—Yes.

16732. Would not all these people think it a great disgrace?—I think they would,—at least the most respectable amongst them.

16733. You have always posed as a friend of liberty, have you not—in the Punjab—you have taken rather a prominent position as a friend of liberty?—I cannot say so myself. I am a humble worker in the cause of my countrymen.

16734. Do you not think it is a serious infringement of liberty not to allow a man to take more than a grain of opium without being registered by a Magistrate?—However violent the remedy may be, the disease is also violent. It is to the interests of the Government, as well as to the interests of the Sikhs, who are the warrior class. If they deteriorate in physical strength, it would be to their interests to keep them from utter ruin.

16735. I suppose you know that in Sikh times the Sikh Chiefs and the men in the Sikh army were great drinkers of alcohol?—I think they used to indulge in liquor.

16736. And you know, I presume, that the cultivation and sale of opium was free in the Sikh times?—I think it was.

16737. Naturally, then, opium and drink were very cheap compared with what they are now?—I should think so.

16738. The Sikhs did not consider opium forbidden by their religion, nor did they apparently consider liquor forbidden?—It was prohibited all the same.

16739. Liquor was?—Liquor was prohibited by their religion.

16740. Opium was not prohibited?—Opium was not allowed by their religion. When smoking tobacco was prohibited by their religion, I hardly believe that opium could have been allowed. Smoking tobacco was absolutely prohibited.

16741. That was to draw a distinction between them and the Mahomedans, I suppose?—Yes, that may be.

16742. You talk of the habit of consuming opium and liquor increasing. Do you think it can have increased since the Sikh times, considering the free cultivation of opium and the cheapness of liquor in those days?—Unfortunately it is on the increase, I believe; especially among these Sikhs, Jagirdars.

16743. These Jagirdars are only to be found in the Umballa District?—I am speaking only of the Umballa District.

16744. (Chairman.) Can you at all say what number of opium sots you saw in these dens, which you visited with Mr. Evans?—I did not see a very large number. I saw about four or five men in each of those shops.

16745. You saw about twenty men in all?—Yes.

16746. What is the total population of Umballa City?—About 26,000.

16747. We have had considerable body of evidence put before us in the same sense in which you have spoken with reference to the evil effects of opium-smoking;

The witness withdrew.

the difficulty has been to suggest a practicable means by which Government can take action to check an admitted evil without doing that which is vexatious and harassing. You have suggested in answer to Mr. Mowbray, as I understood, that a meeting of people for the purpose of opium-smoking might be declared an unlawful assembly, what number would constitute an unlawful assembly?—I think five.

16748. If a meeting of only five people were declared an unlawful assembly, would it not involve on the part of the Government an infinite number of what may be called domiciliary visits in order to discover the presence of four of five people?—When these people come to know that it is a punishable offence to collect in that manner, these dens will hardly exist; and if they were to exist the number of policemen is sufficient.

16749. Would not a number of visits which would be required to be paid to private houses on the part of the police be considerable?—I do not think it would.

16750. You have spoken of yourself as humble, but, I am sure, an earnest worker in the cause of liberty. You will agree, will you not, that what you are proposing should be done involves interference on the part of the Government with personal habits. You will also agree, will you not, that no interference should be attempted specially by a Foreign Government unless it is quite assured that the action it takes will be supported by public opinion?—I think I would agree with that.

16751. I think you will also agree that there has been nothing before us to show that such action as you are recommending will command universal and popular support; you have given us your opinion to the best of your ability, but you cannot show to what extent you will be backed by universal opinion in India?—I cannot speak of that.

16752. (Mr. Wilson.) With reference to public opinion you confined your remarks to this locality with which you are best acquainted?—I was only expressing the opinion of the place where I live.

16753. You have not attempted to express an opinion for the whole of India?—That would be preposterous on my part.

16754. You are distinctly of opinion that the feeling of the people in this locality would warrant and justify some very stringent measures of restriction or prohibition?—That is a very wide question. I must say the opium-eaters will not like any restriction; but as regards the sensible and respectable people, and specially the Mahomedans, they would like to put a stop to opium.

16755. You say that when taken in small doses opium is not so injurious and perhaps in some cases beneficial?—Yes.

16756. I should like to know whether you are referring to the medical use or to the ordinary habitual use of small doses by persons who are in good health and who are not suffering from any disease?—I was referring to where the man is suffering from disease and takes it for medicinal purposes. Then it is beneficial. When opium is taken in excess it is always injurious. When taken in small doses, it is sometimes not injurious, because I have not seen the marks of injury visible on the faces of those people. Although it is poison and may have injurious effects I have not seen those injurious effects visible in all cases of persons who take it in small doses. Nevertheless, a man becomes a slave to his habit; and I say it must be injurious. If he has taken to the use of opium he cannot do any work without it.

16757. (Maharaja of Darbhanga.) You have said that according to the Hindu religion the use of liquor is forbidden?—Yes.

16758. When you say that do you mean by the Hindus the priestly classes of Brahmans, or do you mean that all classes of Hindus are forbidden to take liquor?—I think all classes.

16759. Are you quite sure upon that point?—That is my belief.

16760. Do you know that Rajputs are allowed to take liquor?—The Shastras are so very different and so many interpretations can be put upon the texts. Sometimes in some cases people are allowed to drink, while in other cases people are not allowed to drink.

Mr. ISHBI PRASAD ENGLAS called in and examined.

Mr. Ishbi
Prasad
Englas.

16761. (Mr. Pease.) I believe you are a Clerk of the District Court of Umballa?—Yes.

16762. How long have you resided there?—More than 23 years.

16763. Have you had any experience in other parts of the Punjab and North-Western Provinces?—Yes.

16764. Of what classes of the population?—All classes of people.

16765. In what classes is opium-eating prevalent?—Opium-eating is very prevalent amongst the lower classes, and to a certain extent amongst the higher, especially amongst the Hindu Jats.

16766. What is your experience with regard to opium-smoking?—Opium-smoking is very general amongst the low class Mahomedans.

16767. (Sir James Lyall.) You mean the low class Mahomedans in towns?—Yes.

16768. (Mr. Pease.) Do they smoke in opium saloons or in their own houses?—In houses. There are two shops in the bazaar where they smoke openly.

16769. Those shops are not in connection with licensed shops, are they?—No; there are no licensed shops.

16770. Have you visited them?—Yes.

16771. What did you see?—I saw people smoking there. They came in one by one, and went away when they had done. There are not lots to be seen at one time.

16772. How is the proprietor of the shop paid for the smoking?—He makes his living in preparing the smoking stuff and some eatable things.

16773. Do the people pay for the *chandu* they smoke?—Yes. They do pay the proprietor of the shop.

16774. Did you see any payments made?—Yes.

16775. What is the effect of the consumption of opium?—If opium is taken, even in moderate quantities, after five or ten years a man becomes incapable of doing his ordinary work until he gets his dose of opium. It affects the thinking power of a man: he cannot properly understand his business. It is often taken for debauchery by young men, and ends by rendering them impotent. The same result ensues with all who take it in considerable quantities. They lose energy, and so become untrustworthy.

16776. Is it considered any disgrace to eat opium?—Opium-eating is looked upon as disgraceful; opium smoking is more so, and in a short time an opium-smoker becomes a mere skeleton.

16777. Do you believe that the preparations of *chandu* and *madak* are allowed for sale?—There is no restriction: anybody can prepare it and use it.

16778. You are aware that it is not lawful to sell *chandu* or *madak*?—Nobody can sell it, but they can prepare and use it in their houses. Two or three men meet together at night time.

16779. Your evidence is that you have seen it sold. Have you seen money paid for *chandu* and received by the shop-keeper?—Yes. At the same time he gives them something else, and he includes in that the charge for the *chandu*.

16780. He gives the *chandu* for nothing, and charges for the sweetmeat, or whatever it is, extra?—Yes.

16781. Do you think that further measures for prohibition are necessary?—Yes.

16782. Do you think that public opinion would support such measures?—Yes.

16783. Have you any suggestion yourself to make as to what those measures should be?—It could only be done if opium cultivation is restricted.

16784. You would restrict the cultivation of poppy. Would you allow license to be granted for sale as at present?—Not in the present form; only for sale for medical purpose.

16785. (Mr. Mowbray.) You have resided at Umballa for more than 23 years, how old are you?—I am 45 years of age.

16786. You have said that you have had some other experience in other parts?—Yes. In the North-Western Provinces. I was at Farukhabad in the North-West Provinces.

16787. You lived there for the first 22 years of your life?—Yes.

16788. With regard to these opium places where you saw people smoking, in your opinion was the money paid for the *chandu*?—Yes. The thing given besides, was not half so much value as the money paid.

16789. Have you informed the police about these places?—No. It is very difficult to prove. The shop-keeper and smoker would both deny it at once.

16790. You saw what took place, and in your opinion there was a sale of *chandu*?—Yes; in another way. 17 Jan. 1894.

16791. What we should call a colourable sale?—Yes.

16792. You are an Officer of Government yourself?—Yes.

16793. Did you not think that it was your business to inform the police that you had seen what in your opinion was a colourable sale of *chandu*?—But where was I to get evidence for that?

16794. I only put it to you whether it was not your business to inform the police of what appeared in your opinion to have been a breach of the law?—Strictly it ought to be before the law.

16795. I admit that a Magistrate might not take the same view of it, but in your view it was a colourable sale?—Yes.

16796. I suggest to you whether in your opinion, you as a person in the employ of Government, ought not to have drawn the attention of the police to this, in order that the question might at any rate be tested in the Courts as to whether this thing could be stopped or not?—If there had been clear proof of it I would have done it. The shop-keeper and smoker would speak against me, and it would be hard for me to establish it. They would bring a charge against me for making false complaints.

16797. I think you will agree with me that all that proves the extreme difficulty of bringing home this offence of selling *chandu*?—If the officers were to mix with the natives there would be no difficulty, and very little evidence would be necessary on that score.

16798. You are a person who does mix with the natives, and I should like to know why your evidence upon that point would be of less value than that of any other official?—I am merely a clerk. A Judge's position is quite different. His opinion and information and knowledge is far superior and more reliable than a mere clerk's.

16799. Is that your general opinion about the value which we ourselves are to attach to the evidence you have just given us?—But this is a different enquiry.

16800. (Mr. Haridas Veharidas.) Are you a Hindu?—No. I am a Christian.

16801. You have no objection to the use of alcohol?—I take objection to it.

16802. You also take objection to the use of opium?—Yes.

16803. Would you make any difference between the two— which is the more objectionable?—Both are evils.

16804. Both are evils, but one must be a greater evil than the other?—Wrong is a wrong after all. In one case the evil consequences are near at hand, and in the other they are at a distance.

16805. One causes violence and the other stupidity, —is that the difference?—If a man takes opium in moderate quantities, he will never stop it but increase it. The poor classes of people get only three or four annas a day. When they go to excess, they spend more than half their income on the drug, and the other half is insufficient to support their families. The women have to work also. They earn very little; and want of food and clothing is a great temptation to the poor class of women to fall a prey to immoralities. In drinking the person himself directly commits wrong.

16806. The cost of alcohol falls on the families, too, the same as opium?—The man who drinks alcohol, himself commits wrong; but the opium-eater causes others to commit wrong, — that is, all his family.

16807. You say that the man takes half of his income to purchase opium: the same remark would apply to alcohol, would it not?—Opium is generally taken by the lower classes of the people, and alcohol is taken by the richer and middle classes of people. On certain occasions they take it, — at marriages or deaths.

16808. You make no difference between the two?—Both are evils.

16809. You would not like to see a man give up opium and take to alcohol?—I wish all kinds of intoxicants to be prohibited.

16810. If a man gives up opium he will require another stimulant, what would you say if he took to alcohol?—It is going from bad to worse.

Mr. Ishri
Prasad
Engles.

Mr. Ishri
Prasad
Engles.

17 Jan. 1894.

16811. Would you like that?—I would not like alcohol to be allowed.

16812. If he is inclined to take some sort of stimulant, do you prefer that he should have opium to alcohol?—I would say that we should do away with both.

16813. (Sir James Lyall.) Will you tell us the first occasion when you went into an opium-smoking shop here?—Every evening or every second evening I go out into the bazaar and I mix with the poor classes of people. I go to their houses and sit and talk with them. That is the opportunity I have of seeing the people.

16814. Why do you do that, are you engaged in mission work at all?—I am not engaged in mission work. I am a Clerk of the District Court.

16815. Have you been in the habit of going into these smoking houses?—Everyday I go to the bazaar to make purchases, and I see the people. I see them accidentally.

16816. You have seen them for a long time?—Yes.

16817. Is there a cantonment in Umballa?—Yes.

16818. Do you think that there are other towns or villages in the Umballa District where there is a smoking shop?—I have had no occasion to go out to the villages.

16819. What sort of people do you see in the shop?—Carpet-makers, masons, carpenters, comb-makers, and others.

16820. Are these people from the North-Western Provinces or from the Punjab?—The comb-makers and carpenters and most of the carpet-makers come from Umballa City. A few come from the North-Western Provinces. The people from the North-Western Provinces brought in the habit of *chandu* and *madak*-smoking.

16821. (Mr. Wilson.) You have said that opium-eating is looked upon as disgraceful?—Yes.

16822. We have had a number of witnesses who have said that it is not thought so disgraceful, and that they take it themselves and are not ashamed to say that they take it. Will you tell us by what persons or by what classes of

persons it is looked upon as disgraceful?—The higher and middle classes of people look upon it as disgraceful. The lower classes have no moral idea.

16823. You think that the respectable middle classes, merchants, traders, professional men, and so forth, regard it as disgraceful?—Yes, the poor classes of people are in a very dark state morally.

16824. (Sir James Lyall.) In saying that the respectable middle and higher classes think the opium habit disgraceful, do you mean the excessive use of opium or the moderate use?—The people do not stop at the moderate use. It always turns into excessive use in a very short time.

16825. While a man is taking it moderately, is that thought disgraceful?—Only one man out of a hundred would be able to keep up that moderation.

16826. When you talk of the respectable middle classes, are you thinking of the respectable middle classes in towns or in the country generally?—Both.

16827. Do you consider these Jats, Sikhs and zemindars, the men who cultivate themselves in the villages, and who enlist in the army, the respectable middle classes, or do you consider them the lower classes?—The lower classes.

16828. In the Punjab those people and the people below them form the great mass of the population?—Yes.

16829. They form at least 90 per cent. of the population?—Yes.

16830. Those are the people who you say have no moral ideas, and do not consider it disgraceful?—Yes. These people ought to be raised from their low standard of moral character.

16831. We have to look to the general opinion of the country: have we not?—No, to the moral character and moral good.

16832. Do you think we ought not to pay any attention to the opinion of the masses?—We ought to raise the people to good moral character.

16833. By order?—Not by order, but by proper means.

The witness withdrew.

(Chairman.) It seems to me that yesterday we were in danger of drifting into a misunderstanding from a possible mistranslation of the vernacular into the English

language. I think it would be as well to call Mr. Arjan Singh, our interpreter, to clear up the matter. He seems to be particularly competent in both languages.

Mr. Arjan
Singh.

MR. ARJAN SINGH, recalled and further examined.

16834. (Chairman.) Will you look at the two proofs which were put in yesterday, one by Lalla Ram and the other by Jowala Singh? Our attention was specially directed yesterday to the expression "intoxicant" and "intoxication" in the proofs of evidence put in by two or three of the witnesses who in other portions of their evidence have spoken favourably of the use of opium in moderate quantities and under certain circumstances. I reminded the Commission yesterday that in its original use the English word "intoxicant" implies that the article to which it is applied is necessarily harmful; but when we speak of an article which has a stimulating power, but which is not necessarily harmful, then the term "stimulant" or "stimulating" is generally used. It appeared from the context that the translator of these proofs might possibly have been at fault in the use of the word to which I have referred in his rendering of the vernacular. I wish to ask the witness—are you satisfied that the translation as originally made accurately represents the meaning, and if not, can you tell us what you consider would be the more correct translation?—The word "*nasha*" in Urdu conveys two different meanings:—

(a) As applied to a material or concrete object it denotes any article that creates even a temporary excitement in the human mind. Thus all stimulating and intoxicating drugs are included in it, not excluding tobacco-smoking either.

(b) As applied to a mental condition the word "*nasha*" indicates the state brought about by intoxication either amounting to, or bordering on, senselessness. As used in the statements put before the Commission, the very context shows that in the original it has been used as denoting a stimulating object and not as one producing senselessness. In these cases the context shows that the meaning was not "intoxication" but rather "exhilaration."

16835. (Mr. Pease.) Have you satisfied yourself by reference to the original that that was the word used?—I speak only of the word "*nasha*."

16836. (Chairman.) What is the word you are dealing with?—I was under the impression that the word used in the vernacular was "*nasha*." The explanation I have given has reference to that word.

16837. (Mr. Fanshawe.) In translating the witnesses' own documents or printed statements the word "*nasha*" was put to them?—I remember that the word read out yesterday and which we were discussing was "*nasha*."

16838. (Chairman.) If that was the word, you say that, looking at the context, the word "stimulant" would be more correct, and, as far as you know, express the meaning?—Yes.

The witness withdrew.

(Mr. Pease.) We might accept this as evidence subject to Mr. Dane, or some one else, satisfying us that the word used in the originals was "*nasha*."

(Mr. Dane.) At a later period I shall be able to produce the original abstracts of the witnesses.

Adjourned to to-morrow at Lahore.

At the Town Hall, Lahore.

FORTY-NINTH DAY.

Thursday, 18th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 " WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.
 " A. U. FANSHAW.

MR ARTHUR PEASE.
 " HARIDAS VECHARIDAS DESAI.
 " H. J. WILSON, M.P.

MR. J. PRESCOTT HEWITT, C.I.E., *Secretary.*

SURGEON-COLONEL CLEGHORN, M.D., called in and examined.

Surgn.-Col.
Cleghorn,
M.D.

18 Jan. 1894.

16839. (*Chairman.*) I believe you hold the important appointment of Inspector-General of Civil Hospitals in the Punjab?—Yes.

16840. You have come here to give evidence with special reference to the use of opium by the inhabitants of the city of Lucknow?—Yes.

16841. The practice of taking opium is common at Lucknow?—Yes, very common.

16842. To what causes do you attribute the habit: do you consider it due to any political cause?—I think it is largely due to the immorality during the Nawabi régime affecting the inhabitants generally, and that as a rule it is now confined to the descendants of the people who lived during the Nawabi reign. It is practically unknown outside the city of Lucknow.

16843. (*Sir William Roberts.*) Do you distinguish more than one class of opium-eaters?—There are two classes of opium-eaters: those who take it in small or stimulant doses, and those who take sedative doses.

16844. Would you compare those who use opium in large or sedative doses with dram drinkers or soakers among ourselves in England?—I have had very little experience of excessive opium-eaters; it is exceptional, and I have not met them in private practice or in dispensary practice.

16845. Not any cases of excess?—Very few.

16846. What results have you observed in cases of excessive use of opium?—In the few cases that I have seen I observed listlessness; practically they are useless for all the purposes of ordinary life when the drug is taken in excess. But I have seen very few cases in Lucknow.

16847. The persons you have seen have been drowsy?—Drowsy and listless.

16848. Were they also very emaciated?—No, certainly not. We have been taught to believe that the habitual use of opium is a demoralizing vice, leading to mental and physical deterioration—the cases of excess have been held up as typical of the use of opium in all its forms. The moderate use of opium and its beneficial results will come as a revelation to the people of England, and must modify their views on the subject, in the same way as a personal acquaintance with opium-eaters in India has changed the opinions of medical officers and others who have long resided in this country.

16849. How would you describe the beneficial results of eating opium in moderation?—I am speaking of my experience of opium-eaters in Lucknow, where there is a great deal of syphilis and chronic rheumatism. People take it chiefly on that account in the first instance. Its moderate use in other cases is not followed by any visible effects whatever. It is impossible for any one to decide that a man takes opium in moderation. You may be in the city of Lucknow as I have been every day and become intimately acquainted with the people, and you could not possibly tell that they were opium-eaters. I fancy that about 50 or 75 per cent. of the inhabitants of Lucknow take opium.

16850. You are speaking of the adult male population?—Yes, and a large number of children get it in infancy.

16851. Has the use of opium in children come under your personal observation?—From my own personal observation I can say that it is a common practice in Lucknow.

16852. How is it given?—In small doses, in the solid form. The parents take it, and the father gives a little to the child to keep it quiet.

16853. I presume that they are so accustomed to the use of opium as a domestic remedy that they are able to avoid accidents?—Yes; but there are accidents occasionally. Naturally they do take place with children.

16854. Do you think that the practice of giving opium in this way to children is a good one?—It is not one I would advise. But, looking at it in another way, if opium is followed by such disastrous results you would expect that none of these children would come to maturity, but the fact is they only die from poisonous doses of opium, not from the bad effects of it.

16855. Do you think those accidents are numerous?—I have seen a few cases at the dispensaries, and I would conclude that there are a considerably larger number of cases that do not come to the dispensaries.

16856. Do you mean fatal cases?—Cases of opium poisoning. By the use of remedies they have recovered. They have taken them to the dispensaries.

16857. Is it your impression that there are many fatalities from this practice?—I should fancy there are a few, necessarily, for the practice is so common. There must be some fatal cases amongst children.

16858. And speaking broadly, the practice is not generally deleterious to the children?—Apparently not, by the results.

16859. According to your account, I think you said that opium was the commonest domestic remedy in this part of India?—In the North-West Provinces and Oudh.

16860. In the Punjab?—I have very little medical acquaintance with the Punjab.

16861. In Lucknow and the neighbourhood opium is the common domestic remedy?—They take it for almost every thing—rheumatism, diarrhoea, dysentery, bronchitis, syphilitic complaints, and all similar complaints. It is a common thing, and that is very often the commencement of the habit.

16862. (*Mr. Wilson.*) Would you describe opium, used in the way you have been speaking of, as a remedy or an anodyne?—Not as an anodyne—a stimulant purely, in the same way as you take a cup of tea in the morning, or a cigarette.

16863. You have spoken of it as being in common use by the people as a remedy?—For these chronic complaints.

16864. I want to know whether you consider they take it as a remedy or as an anodyne?—Not as an anodyne. It has no apparent anodyne effects in the doses they take it. These are the people who attend at the dispensaries, and whom I see daily.

16865. (*Sir William Roberts.*) Do you mean by anodyne narcotic or hypnotic effects?—Hypnotic.

(*Sir William Roberts.*) I think there is a little confusion: anodyne means really pain sedative.

(*Mr. Wilson.*) In that sense I alluded to it.

16866. (*Sir William Roberts.*) You do not mean it in that sense: do you mean as a narcotic?—Simply for the relief of uneasiness.

Surgn.-Col. Cleghorn, M.D. 16867. (Mr. Wilson.) Will you explain a little more fully what you mean by the Nāwabi régime?—Under Native Government.

18 Jan. 1894. 16868. How has that produced the common practice in Lucknow?—Because the court was immoral, and that immorality tended to spread all through the city of Lucknow. It attracted to Lucknow adventurers and the scum of India. These people were immoral and vicious, and took opium as a part of that immorality—probably in those days in excessive doses. For this immoral excess opium was taken in small doses, to allay local irritation and to stop discharges. I have no doubt they took it then. Lucknow is a well-known city now for immorality in all its forms.

16869. Do you class alcohol, tobacco and tea together as producing functional disorder and organic disease?—No. Alcohol as producing organic disease and functional disorder; tobacco and tea producing functional disorders.

16870. Tea?—Functional disorders.

16871. And you say that the use of opium in small doses does not produce any of those effects?—Absolutely none, in small doses.

16872. Will you explain what you mean by saying: "We have been told by people that the habitual use of opium is demoralising"?—Because I, in common with all Englishmen, were educated to believe that the habit of taking opium in any form was a vice. We were all educated to believe that the man who took opium was a vicious man in every way. We probably came to believe that from De Quincey's writings, from the writings in the medical papers of cases of excess, and from the papers sent home from China by missionaries and others regarding the excessive use of opium. We came to believe in these different ways that it was a vice; and it is looked upon as a vice now. I am intimately acquainted with the natives, their habits and customs. It is not considered a vice by them in any way, and is not followed by the effects of a vicious habit—therefore it cannot be called a vice. I say that the taking of tea, tobacco and alcohol are greater vices than the moderate use of opium, because their uses are followed by much worse effects. I believed opium taking was a vice until I came out here and saw its effects.

16873. May I ask you which of these four articles you use yourself?—I use alcohol and tobacco; I have been obliged to give up tea.

16874. And opium?—I never take opium. I have not come to that yet. I am coming to it. That will be last.

16875. I think you know something about malarial fever?—A very great deal.

16876. Will you tell us what you think about opium as a prophylactic against malarial fever?—I have never used it, or had experience of it, as a prophylactic against malarial fever.

16877. You are probably aware that it has been described to this Commission as a great prophylactic?—I have heard of it.

16878. You do not concur in that?—I have no experience of it as a prophylactic. My personal experience of opium is connected with Lucknow, and there I went into the matter.

16879. It has not occurred to you, or been brought before you professionally, that it was a valuable prophylactic for malarial fever?—I have always used quinine.

16880. You have suffered yourself from malarial fever?—Yes.

16881. And you have not used opium?—Because quinine is much better. Quinine stops it.

16882. May I ask whether you sometimes prescribe a certain quantity of alcohol in some of its forms for daily dietetic use to some of your patients?—Yes, sometimes.

16883. Have you ever done so with opium?—I have given opium regularly to some people.

16884. For daily dietetic use?—For disease.

16885. But you would not recommend anybody in health to take it?—No European in health to take it. In the same way I would not recommend a native to take alcohol. If they did take either, they would probably go to the bad. Opium is a stimulant for the east, and has been used by the classes who take opium for generations past, and it suits them. If they took to alcohol, they would go to the

bad completely, in the same way probably as a European who took to opium would take it in excess. He knows nothing about it; it is not suited to him. It seems to agree with these Eastern nations.

16886. I was going to ask you whether you would regard it as somewhat a difference of race, or a difference of personal habit or experience?—I would not recommend it to either, because the fewer habits a man has got the better. I would not, as a medical man, recommend any one to take alcohol, even a European, or to take opium, or to take tea, or smoke, if he did not smoke before.

16887. Now, you have compared the value of the testimony of medical officers and missionaries?—Yes.

16888. I take it that a medical officer's principal business is to see people when they are ill?—I am talking of my own personal experience.

(Chairman.) That was not put before us in his evidence-in-chief.

16889. (Mr. Wilson.) I will put it in another form for the sake of the notes. In your opinion, have medical officers in this country or missionaries the best opportunities of forming an opinion as to the effect of the opium habit on the natives of India?—Medical officers.

16890. Will you tell us why?—For this reason: an Englishman's idea of a missionary's duties in this country is that he makes house to house visitation, with the object of converting the people. It is perfectly impossible that he can do so in this country: and he never does it. I was intimately acquainted with nearly the whole of the upper class population in Lucknow, and I was Superintendent of nine Dispensaries in the city of Lucknow, with an attendance of 200,000 patients. I visited one or more of these Dispensaries every day, and remained there for some time, seeing how they were working and asking the people questions. I became intimately acquainted with them. I was in the city once or twice every day of my life for the 5½ years I was there; and my opportunities were certainly greater than any missionary in Lucknow. The duties of a missionary in Lucknow as I saw them were teaching, preaching, and literary work. They knew very little about the habits and customs of the natives in the city of Lucknow.

16891. With those onerous medical duties among sick people, you would not have a great deal of leisure?—I said I was intimately acquainted with the upper classes of India. I often visited their houses. Without being sick, they often came to me, every week nearly. I got lots of information from them about different things, and treated them as friends. I was on friendly terms with them all.

16892. Should I not be right in thinking that the missionaries, speaking generally, have more intercourse with the poorer classes than the rich?—No, not more than I would have, certainly. If they had more acquaintance with the citizens of Lucknow than I had, why was not their evidence called in Lucknow the other day?—There are no end of missionaries there.

16893. (Mr. Fanshawe.) I would like to ask you one question. You say that only a few cases of excessive use have come under your personal observation?—Only a few cases.

16894. But you are aware—are you not—that among a class of Shia Mahomedans in Lucknow there is a tendency to excess in the use of opium: would that be within your experience?—I have no doubt there was. There were a lot of people in Lucknow who never came out of their houses—upper classes.

16895. Would it be in your general knowledge that the idle population of Lucknow are addicted to excess in the use of opium, as well as in other matters?—In sensual vices they are addicted to excess, but I have only seen a few cases of excessive consumption of opium in Lucknow.

16896. I was referring to a matter of general knowledge, but perhaps you would rather not speak as to that?—Except what I know myself I had rather not.

16897. (Chairman.) May I ask you this, whether your testimony does not come very much to this, that the effects essentially depend upon the quantity taken?—Upon the quantity taken.

16898. That a moderate use may be innocuous and sometimes beneficial, and an excessive use is undoubtedly harmful?—Yes.

The witness withdrew.

Mr. H. MARTYN CLARK, M.D., CH. M., Edin., called in and examined.

Mr. H.
Martyn
Clark, M.D.

16899. (*Chairman.*) You are working in this country I understand as a medical missionary?—Yes.

16900. And you are stationed at Amritsar?—Yes.

16901. You do not come here, I apprehend, to enter into any minute details of this question?—Yes, I wish to be both a general witness and a medical witness on this subject.

16902. You are aware that the main proposition which has been placed before us for consideration is a proposal that the sale of opium in India should be prohibited, except for medical purposes: I should be glad to hear your opinion in reference to that proposal?—I should like to premise that I am a graduate in medicine and surgery of the University of Edinburgh. I have been working as a medical missionary of the Church Missionary Society in the Punjab since 1882, in charge of what is in some ways the largest medical mission in the world. It works in the city and district of Amritsar, and we also have patients from almost every other part of the Punjab. I am thus brought into most intimate connection with all classes of the community, men, women, and children. I mix with them, I have a perfect knowledge of the vernaculars, and am therefore able to understand them, and understand them thoroughly, and I reach and touch their life in a way that the majority of Government officials, I should say, do not, because the people talk to me as a friend, and not as they would to an official. During the last year, in the medical mission of which I have charge, there were 88,961 visits registered, and there were 2,255 operations performed. I quote that to show that I have ample opportunity for forming an opinion. My attention has been keenly directed to this opium controversy, and I have been observing and making enquiries for several years. I have come to the conclusion that there is a great difference between the question as it affects China, and the question as it affects India. I have no personal knowledge whatever of China, but the consensus of opinion from China is such that one cannot but accept the conclusion that opium is deleterious to the people of that country. With the opportunities I have had of forming an opinion concerning the portion of India in which I live, I am prepared to say that there is not the slightest parallel between China and India. It is absolutely wrong in point of fact to say that opium is working the ruin, harm, and mischief in this country that it is said to work in China. I myself am an abolitionist on purely moral grounds. I should like to see opium and many other things too put away. I should like to see the China opium trade stopped. As regards India, I am of opinion that abolition is absolutely impracticable. I do not think it is possible for any Government to abolish the opium habit; and as long as the opium habit continues there will certainly be a supply, and I know of no means by which any Government could prevent the growth, the manufacture, and the transport and the use of such a drug as opium—that is to say, in the event of attempted abolition, I think we should have the opium traffic *plus* smuggling; and from my knowledge of the people of this country, I am prepared to say that the attempt would be looked upon by the vast majority of them as an intolerable tyranny. The result would be a great increase in opium consumption, because there would be no Government check, and it is impossible to force a moral measure against the moral or immoral sense of the people on whom it is to operate. The habit of using opium is a bad habit. Opium is no food; opium is no work-producer, and opium has a great tendency to enslave a man. If it is used in moderate doses it acts first upon the alimentary canal in its whole length, causing dryness of the lips, tongue, throat, and gullet; the secretions are diminished—the gastric juice is and so digestion is, retarded; appetite ceases; intestinal digestion is lessened, and constipation results. The blood pressure is slightly increased, the pupils contract, and a remarkable train of symptoms develop as regards the nervous system. First, we have the stage of stimulation, the stage of very pleasant activity in which the ideas flow freely, and exhilaration, and a sense of well-being is felt. That is succeeded by a calm, and to that calm succeeds drowsiness and sleep. It is this stage of stimulation that the opium-eater wishes to produce and to prolong. This stage of mental activity is best marked in those who are used to the drug. By a careful graduation of doses it is possible for an opium-eater to avoid the second or the narcotic stage, and to indefinitely prolong that of mental exhilaration. In large doses, of course, every stage is intensified, and the duration of the stimulant stage is very much shortened. Every secretion is checked, except that of the skin and that of the mammary glands. The opium-eater takes the drug in order to be brilliant, and it does produce, without doubt, activity and brilliancy; but it puts

nothing into a man that was not there before. As has been tersely remarked, if his talk has been of cows, under the influence of opium he will dream of cows. As with all stimulants and unnatural forms of excitement, there is a subsequent stage of nervous exhaustion and reaction. I call the habit a bad habit because taken in this way opium serves no good or useful end. But when I have said it is a bad habit I do not by any means wish to imply that it is of necessity the cause of the moral devastation or physical destruction that it is often represented to be; or that merely because a habit is bad it is therefore a fit subject for Government interference. The consumption is very large indeed in this country. As far as my knowledge goes, I should say about 14 per cent. of hospital patients use it, and I think very few men indeed could be found in the Punjab, who have reached the age of 50, who are not using it in some form or other. It is used by all classes of the community, Hindus, Sikhs, Mahomedans, outcasts, low castes, no castes; and it is also used by women. Its use in the form of smoking is exceedingly rare, indeed so very rare in our part of the country that it may be disregarded. It is habitually eaten; and it is eaten from a variety of causes, for example good fellowship, colds, various pains, epiphora, and I also believe that it is eaten by not an inconsiderable number for its supposed aphrodisiacal effects. The quantity taken is sometimes enormous: 180 grains is the highest dose in a day of which I have heard. The effects of this use of opium vary very greatly. In a certain proportion of cases the people begin to lose flesh and waste; they become dyspeptic. But in another—and I am bound to say conscientiously, the great majority of cases—no such results appear. While it does not do any good, it does not appear to do the slightest harm. The people who use it are hale and hearty, fit for work and exposure, and the habit seems to interfere neither with their longevity nor their health; and this is the more remarkable thing to notice among hospital patients, because people come to us in hospital when they are sick, and if there were to be any especially weak point about them we should detect it. But while they come to us with their various diseases, *plus* this opium habit, we observe that the opium does not seem to have affected either their health or prospects of life. I have seen great numbers of people who have reached extreme old age after using it for many years—30, 40, 45 years. I know old men now doing a good day's work who began the habit as lads, some in the days of the Maharaja Ranjit Singh, and I am bound to say honestly that they appear to me not a bit the worse. I know one instance of a man of 80 years of age who is reported actually to use 80 grains a day. The accounts one reads of the evil done to opium-eaters by the habit appear to me to be very greatly exaggerated indeed, and they can in no sense apply to the moderate uses of this drug. There are large numbers of moderate users. Possibly the Indian drug may be weaker than the medicinal opium. The latter ought to contain 10 per cent. of morphia. I am not in a position to state what the opium used in the Indian bazars contains, except this, that it is frequently used in the form of an extract, and that ought to be stronger than the crude drug would be. I am inclined to believe that the varying effects depend on the constitution of the person and upon the food-supply. One man may have an idiosyncrasy which makes him more susceptible to the use of opium than another; and a man may be poorly off as regards food, and therefore be much more depressed by it than one who is in comfortable circumstances, and has a good supply of food. But it is very important I think to differentiate between the opium-eater and what I should call the opium sot; and I fancy a good deal of misconception has existed because that distinction has not been made. While I consider the habit altogether bad on moral grounds in every case, I only consider it *physically* bad in a certain proportion of cases, and in a very large proportion of cases with which I have to do I can refer to no harm at all that this drug produces. Unlike alcohol, which ruins every tissue and is the mother of almost endless diseases, opium causes no organic degeneration. It causes no disease that I know of, save this wasting to which I have referred in certain cases, and sometimes a very intractable form of diarrhoea, which may carry off advanced opium-eaters. More than that, in my experience, the opium habit complicates no diseases. Out of the very large operation list to which I have referred, I cannot tell you of one in which the habit of opium-eating retarded recovery, or in any way whatever added to the operation mortality. Opium is, I should like to say, in no sense whatever an antiperiodic. It does not ward off attacks of malarial fever; it in no way shortens such attacks when they do occur. The

Martyn
Clark, M.D.

18 Jan. 1894.

city and district of Amritsar in which I work is notoriously malarious, even in malarial India, and I have not observed that opium-eaters enjoyed any immunity or suffered any the less. Doubtless in cases of malarial fever it soothes pain, aching of joints, and so forth, eases the malaise and general sense of wretchedness which a person has, and to that extent it is useful; but that it is in any case an antidote or specific for malarial fevers, I have not been able to observe. In my experience the effects of opium-eating on the mental and moral condition of people are also curious. In some instances I have noticed a decided deterioration when opium-eating was commenced. The person seemed to become shifty and unreliable. But in the vast majority of cases I have seen absolutely no prejudicial effects upon the mental or moral character of the person. In fact, at this moment, one of the keenest intellects in the Punjab that I know of, belongs to a man who was for many years an excessive opium-eater. He gave up the habit in a day, and now, though 78 years old, he can walk his 40 miles a day, and his natural force is in no way diminished.

Further, it is to be remembered opium is not used to facilitate the commission of any crime in this country. We have no cases of drugging with it for the purposes of robbery or other purposes of that sort. I know of no case in which it has been used as a lethal drug for homicidal purposes; and cases of suicide by it are in my experience and range of knowledge, rare. When it is used for suicide in the Punjab it is generally mixed with oil, because that is supposed to hinder the action of any remedial agent that might be given. Accidents from overdose or careless use of opium cannot be very common, for in 13 years of life in the Punjab I have only seen one such case myself, and that was a case in which a dispenser had by mistake put a double quantity of opium into a mixture. In opium-growing districts I believe the proportion of poisonings are far more common than here. Not only is opium not used to facilitate the commission of crime, but opium itself causes no crime, except perhaps petty theft to gratify the longing. There is no such thing as a murderous opium maniac, or a man under its influence assaulting people, or in any other way making himself obnoxious to the world at large; and there is simply no comparison between what has been called an "opium den" and a gin shop at home.

I have never noticed the train of moral evils that are referred to, as a result of the opium habit, by a certain section of people, such as neglect of home, of children, of business, ruin of families, and so forth. I believe practically such things are simply unknown in the Punjab. After the most careful enquiry, I have been only able to hear of one case in which a man had brought his family to ruin through the torpor induced by excessive quantities of opium. You can have no set of peasantry hardier and thriftier and more careful than our Punjab peasants; so thrifty are they that they even sell the droppings of their cattle, and yet amongst this class you will find an immense number of opium-eaters. They are very frequently beggared by their marriage customs and so forth, but never by opium. Opium forms part of no religious rite or ceremony, as far as I know, neither has it any very pronounced part in social life in this part of India.

In other parts of India it is used, I believe, as a sort of cement between rival clans, if they wish to make peace, and also as a bond of personal friendship; but here every man takes his own pill of the drug; and may give a friend another without any special sanctity or significance being attached to that act of his. The fact that a man takes moderate doses of opium does not of necessity imply that he forms the opium habit. The quantity is not invariably increased, by those who use the drug and in quite a number of cases which I have seen the habit has been given up without that terrible struggle which in other cases one does notice. I have spoken to many people about the subject and about the action proposed for this Commission. Some wanted the drug stopped on the ground that its use was to them an expensive luxury; others desired to be cured of it because they found it did them harm; while others were perfectly happy as they were, and thought that Government might as well leave them alone. Absolutely none approved of the universal prohibition of the drug, and all bitterly resented the very idea of any fresh taxation being imposed upon them. As regards the use of opium for children it is very commonly given in this part of the country, and I am bound to say, as far as my experience goes, it is a thing pernicious. In olden times it was a very favourite vehicle for infanticide, and to this day I fancy it may still so be used. More often it is supposed to strengthen the child against cold, but the real fact of the matter is it is given to keep the child quiet. It is besmeared on to the tongue, or it is put on to the palate,

or a little is inserted under the tongue, or not infrequently it is put upon the nipples of the mother, and so the child imbibes it. It is also put under the finger nail, and the finger is put into the child's mouth to suck. In every case, although it may not kill the child, it certainly hinders its development, and is a thing pernicious for the child. I know nothing more woful in life than to see an opium baby, a poor shrivelled little thing, with its face in wrinkles, and a curious old mannish expression about it, horribly quiet, and wasting almost before your eyes. I am of opinion that in this matter India is not so very much worse than our own country, if at all, for an enormous number of children at home are soothed with opium in the same way. There is a great variety of soothing syrups and teething powders, and so forth, in the market and these are very largely used, especially among the lower classes at home. So that in forming an estimate of the use of opium in India one must not take the fact that it is given to children here as a thing in itself condemnatory—as an evidence of profound moral perversion. Very largely indeed the thing prevails and may be seen in practice at home, and I have not infrequently thus seen the effects of opium on children there. The conclusions I have come to are—considering the customs of this country, prohibition would form an interference with liberty which is not at all warranted by any facts that exist here, and I think it would be a calamity, yes, a downright calamity, if Government control of this traffic were to be removed. The results would be deplorable. It would certainly mean smuggling and unrestricted use, and it might very possibly mean resort to stimulants of other and more terrible forms. The true policy appears to me to be this,—that the traffic should be regulated with the steady view to discouragement, not encouragement; and in order that there might be effective discouragement I should advocate the importance of moral training on the subject by all means in the power of our Government. I should like finally to add, as a Missionary, that opium in this country is absolutely no hindrance whatever to missionary work.

(Chairman.) The statement you have made of your views is so complete and exhaustive, that for my part I do not think it necessary to put any questions to you with the view to elucidate what are your views. For my own satisfaction, I can only promise that I for one shall give the most careful consideration to what you have put before us.

16903. (Mr. Pease.) Have you had any experience of the smoking of opium?—None whatever.

16804. You are aware that that is the practice in China and not the practice in India: are you aware that the Anti-Opium Society has always drawn a marked distinction between the practice of smoking in China and the practice of eating in India?—I did not know that, but I am very glad to hear it, because there is a radical difference.

16905. What is your practice in the hospital with regard to those who have been in the habit of taking opium before they come into hospital?—If they wish to break off the habit do you mean?

16906. No. If they have been in the habit of taking opium regularly, do you allow them to continue it after they come into hospital?—Yes. If I happen to be giving opium myself I say: "You had better discontinue your dose, as I am going to give it to you from a medical point of view, and you might have an overdose." I enquire carefully if a person uses opium before I give him opium.

16907. In case he is in the practice of taking opium, you have largely to increase your dose, if you wish to produce the effect you would produce on a non-consumer?—I think so, slightly, not of necessity very largely in such a case. I give it hypodermically, and there it acts, I think, in a much more satisfactory way than it would if I give it by mouth.

16908. You speak of Government exercising their influence to reduce the consumption of opium: have you any way by which you could suggest that the Government could take action in that matter?—I think it might form a part of moral training in all our schools and colleges to teach men to be men, and not to be enslaved by any habit or anything.

16909. What is your view as regards the present facilities for obtaining opium: do you think they should be reduced?—I think the facilities are not so extensive as to require reducing. In this part of the country a man has really to look about for an opium shop, and to put himself to some little trouble to get it. I do not know how it may be in other parts of India.

16910. (Mr. Wilson.) Are you acquainted with Burma at all?—Not at all.

16911. Are you aware that in Burma opium is prohibited to the Burmese?—I have heard so.

16912. But that an arrangement exists whereby these persons who have become thoroughly habituated to it are registered, so that they can continue to obtain it?—I have not heard it.

16913. You mentioned that you have conversed with people about universal prohibition, and not knowing the system in Burma of course you did not suggest to them that such an arrangement would be possible in this country?—Of course I use universal with the idea of the part of the country in which I am. I can give no information about any other part of India.

16914. The point I want to put to you is this, that possibly those persons might have had a different opinion if you had not used the term "universal prohibition"?—Possibly.

16915. Are you aware that no one has proposed universal prohibition?—I use the words universal prohibition in the sense of a total prohibition of the drug as now used, a reversal of the present order of things.

16916. Are you aware that no one has proposed that?—I rather thought that that was what was wished for.

16917. (*Chairman.*) Prohibition except for medical use?—I have excluded medical use in all I have said. That is to be understood to stand aside altogether. I merely use the term prohibition in the sense of prohibition for ordinary consumption.

16918. Will you tell me what parts of India you have had experience of?—The Punjab—more particularly the central Punjab.

16919. You speak of the people of India, and you really mean the Punjab?—Did I use the phrase "people of India"?—

16920. You spoke of the people of this country?—Manifestly I speak of that portion of the country in which I am. I have no authority to speak for any part of India with which I am not acquainted.

16921. I think when you were in England a while ago you had some conversation with Dr. Maxwell on this subject?—I had.

16922. Did you give him two instances of very sad results from the use of opium?—I do not think so. I told him of two native Christians, amongst the best Christians I have known, and they were both opium-eaters, and to that extent I think it was sad. One of them did die from the results of the habit, and that was of course sadder. The other is still alive and happy.

16923. Does he not suffer?—He has abandoned the habit, because as a Christian he felt he ought to, and he did.

16924. Did he feel it was doing him any harm?—I do not think he felt it was doing him any harm. He felt it was not a worthy thing for a Christian, and he abandoned it.

16925. (*Mr. Moubray.*) You do not make it any condition of belonging to the Christian Church that they should abjure opium, do you?—Not in India. I believe it is so made in China, but certainly not in India, as far as my knowledge goes.

16926. (*Mr. Haridas Voharidas.*) You said as a medical man that the evils of opium-eating have been greatly overstated: would you also in the same manner say that the advantages of the use of opium have been greatly overstated?—When I said the evils of opium-eating have been greatly overstated, I meant that the views and publications,

and so forth, urged in certain periodicals are I think, distinctly exaggerated.

16927. You said that the evils of opium-eating have been greatly overstated: in the same manner do you think that the advantages of opium-eating have been greatly overstated?—I really can claim no advantage for it myself. I do not know what advantages have been claimed for it. I do know a great many evil results have been attributed to it that are not correct.

16928. Was that in the evidence we have had placed before the Commission?—I purposely read none of the evidence that I might be able to tell what I felt without being guided by anybody in the matter.

16929. Not guided, but overstated, overstated not by you but by others?—I have read absolutely none of the evidence because I knew I was going to be a witness.

16930. You do not know of any advantages that have been claimed for it?—I know of no advantages one can claim for the habit. I have seen a great many statements of the harm it is said to do which I think are worse than exaggerations—they are simply false.

16931. (*Sir James Lyall.*) You said you felt compelled from reports you had read to believe that the opium habit was extremely deleterious in China: what reports were these?—There is a universal consensus of Missionaries of every Society, of every type of mind, and working in every part of China; there are Medical Missionaries, Lady Missionaries, Lay Missionaries, and Ordained Missionaries, and the universal testimony is that it ruins the Chinese, body, soul, and spirit.

16932. You have not seen any reports of the Roman Catholic Missionaries in which they gave evidence to the same effect?—No, I have not seen any of the Romanist reports.

16933. Have you ever read any of the Consular reports?—I have read extracts. I do not know how far the context would bear them out. For instance, in the publications of the Anti-Opium Society, I have read the statement of Sir Thomas Wade, and so forth.

16934. You have not read the Consular reports?—Just those portions of the reports that came in in the publication specified. I have not read a report in its entirety.

16935. You say that you are bound to consider that the reports you have seen about India are exaggerated: don't you think that the Missionary reports from China may be also exaggerated?—I do not think so, for this reason—firstly, the smoking of a drug is bound to be a very much more deadly thing than the eating of it; secondly, the reports are so thoroughly at one in all places and with all classes of men.

16936. All classes of Missionaries?—All classes of Missionaries. I am bound to believe that things are as they say, and I am perfectly clear in my own mind that in China it is the most terrible hindrance to the spread of the Gospel and the civilization of that country, and really works moral havoc.

16937. Are you aware that in Burma the Government officials were in general strongly disposed to advocate the prohibition of the use of opium by Burmese?—Yes.

16938. But these same officials also reported that, so far as they could see, the Chinese population of Burma did not suffer materially from the habit of smoking opium, except in a few very rare cases?—I was not aware that they had reported that about China.

The witness withdrew.

COLONEL D. M. STRONG called in and examined.

16939. (*Chairman.*) You are in command of the 10th Bengal Lancers?—Yes.

16940. What is the strength of the regiment?—Six hundred and twenty-five.

16941. And of these how many are Sikhs?—Two hundred and forty.

16942. How many of these Sikhs take opium periodically?—Thirty take it periodically.

16943. And how many in moderation?—Eight or nine habitually in moderation.

16944. Have you any Dogras or Mahomedans in your regiment?—Yes, 2 troops of Dogras and 3 troops of Mahomedans.

16945. What is the practice of Dogras and Mahomedans with reference to opium?—They only revert to it as a medicine.

16946. Of the men under your command are any prone to use it in excess?—No, I have never known of a case being brought before me.

16947. Speaking generally, in your regiment has the use of opium ever been known to be productive of injurious results?—I have never noticed any injurious result from the use of opium.

16948. What do you say, speaking generally as one who has been many years in India, as to the moderate use of opium?—I should say it is beneficial, and that any interference with it would be unwise, most unpopular with the

Mr. H.

Colonel
D. M.
Strong.

Colonel D. M. Strong. 18 Jan. 1894. men, and very likely to cause serious discontent in the army.
16949. (*Mr. Pease.*) I should like to have an explanation of the word "periodically": what does it mean?—Occasionally.

16950. It does not refer specially to the winter season: we were told before that with Sikh regiments it was common to take opium 2 months in winter and to abstain from it the other 10 months of the year: I do not know if that is the practice you refer to?—They often revert to it in cold weather to keep off the cold. This is the result of enquiries that I made in my regiment: it might be different in other regiments.

16951. Those that take it periodically are those who take it for semi-medical use, as a preventive from the effects of

cold?—Yes, or if they were fatigued or feeling uncomfortable.

16952. There are only 8 or 9 who take it all the year round?—Yes.

16953. Do you know what quantity those 8 or 9 take?—I was told about 1 to 2 grains at a time.

16954. (*Mr. Wilson.*) Do I understand that the word "occasionally" would better express your meaning than the word "periodically"?—What I meant by "periodically" or "occasionally" was that they did not take it regularly every day, that they took it if they wanted it.

16955. By "periodically" you did not mean that they took it at certain stated periods, but occasionally?—No, as a kind of luxury.

The witness withdrew.

SURGEON-CAPTAIN W. H. E. WOODRIGHT called in and examined.

Surgn.-Capt. W. H. E. Woodright.

16956. (*Chairman.*) You are the Medical Officer of the regiment of which Colonel Strong is in command?—Yes.

16957. Can you give us any medical particulars with reference to the use of opium in your regiment?—Opium is used in the regiment by the 3 Sikh troops—strength 240—60 or 70 of whom, I believe, take it occasionally, 7 or 8 take it continually day after day; but no case has ever come to my knowledge of any having taken it in excess. With regard to the other men, the Mahomedans and Dogras take it occasionally as a medicine for dysentery and bowel complaints generally, and for lung and malarial affections.

16958. Will you give us any particulars as to the average daily consumption and the effects produced?—The average daily consumption per man, as far as I can discover, is about 2 grains, but of course there are exceptions to this, and one man lately confessed to me to eating 6 pies' worth of opium daily.

16959. How many grains would that be?—There are two kinds of opium for sale in the bazar, pure and impure. I sent about 3 days ago and bought 6 pies' worth of each kind, and carefully weighed them both—the pure opium I found to be 12 grains in weight, the impure, grains 16. The sowar who told me he took six pies, worth of opium was a splendid specimen of Sikh. He was healthy and appeared no worse for the amount of opium he was eating.

16960. What is the result of your general experience on this question?—I have never known any harm come from it in my experience. So far as my experience goes, I have never seen a case where the use of opium has been productive of injurious results, either physically or morally, either in this regiment or in any of the others I have served in, but just the reverse, and there is no doubt in my mind that opium is a great boon to those natives who are run down with malarial fever and dysentery.

16961. What other regiments have you served in?—The 1st Punjab Cavalry, the 18th Bengal Lancers, and for a month in the 14th Sikhs.

16962. How many years?—This is my 7th year now.

16963. (*Sir William Roberts.*) I presume that you would not at all suggest that the soldiers who took opium were in any way better than those who did not take opium?—No, I should not.

16964. Have you had any experience outside your military experience?—I am at present Civil Surgeon of Jhelum, and Superintendent of the Jail there. I have been in charge now for the last month and-a-half only.

The witness withdrew.

RESALDAR-MAJOR KHAN BAHADUR KHAN called in and examined (through an interpreter).

Resaldar-Major Khan Bahadur Khan.

16979. (*Sir James Lyall.*) You are Resaldar-Major in the 10th Bengal Lancers?—Yes.

16980. What is your religion?—I am a Mahomedan.

16981. What is your opinion upon the opium habit?—I have been in the army for 34 years and have not seen anybody injured by the habit of opium.

16982. In those who take small doses?—Whether they take it in large quantities or small quantities, 2 grains or 1 grain.

16983. That is the amount they usually take?—That is the amount they usually take.

16984. When is it taken—on any particular occasion?—Generally they use it after they are 40 years of age, but they use it also on other occasions, such as for fatigue.

16985. Do you mean men frequently take to the habit habitually after 40 years of age, and before 40 years take it occasionally when they are tired or when they are cold?—There are persons who take it after 40 years of age, and there are other persons who take it in early life on account of dysentery and other diseases.

16986. To what extent is it used in the villages as a medicine?—They give it to children from 1½ years to 4 years of age in small quantities.

16987. Do you take it yourself occasionally?—I am much given to hunting, and the Sikhs who accompany me frequently take a supply of opium with them, and I have occasionally taken small quantities from them and used it with advantage.

16988. That is, you were able to go on the whole day?—Yes.

16989. How do you think the habit of taking opium compares with the habit of taking alcohol?—I think the habit of taking opium is better than that of taking alcohol.

16990. Do you think that opium-eaters can break off the habit?—If they wish they can break it off.

16991. Do they often break it off?—They generally break it off. They take to it in winter, and give it up generally in summer.

16992. Are you speaking of the regiment now or generally?—I am speaking generally of people of my own class.

16993. Where is your home?—In the Jhelum district.

16994. It is commonly used there among the Marwaris?—It is not much used there, as much is not grown there.

16995. Is it the custom there at all, in that part of the country, to use it in the winter, and not use it in the summer?—It is not the custom there. All people do not take to the habit in winter and give it up in summer. Persons who are suffering from coughs and colds take it in winter.

16996. What is your opinion on the subject of the proposals to prohibit the use of opium?—I think it would involve great loss for India.

16997. What kind of loss?—First of all the Government would lose its revenue, several lakhs or more, I do not know what amount. Secondly, cultivators would suffer, as there is some land in which no other crop can be grown.

16998. Any other loss?—No other loss I can think of.

16999. Is it used as a domestic medicine by people in the Punjab?—It enters into many prescriptions.

17000. Do country people keep it in their houses as a medicine?—The women keep from two to four pice worth of opium for the sake of their children.

17001. What is your tribe?—Ghakhhar.

17002. (*Mr. Fanshawe.*) Has your 34 years' service been continuously in the same regiment?—I first served in another regiment, but I have been serving in my present regiment since 1864.

The witness withdrew.

LIEUTENANT-COLONEL F. D. BATTYE called in and examined.

17017. (*Chairman.*) You are commanding the Queen's Own Corps of Guides?—Yes.

17018. Do I understand that you have not given any special attention to the consumption of opium in your regiment?—No, I have never had it come before me.

17019. Do you mean that the results are not particularly marked?—Certainly not.

17020. You have obtained some statistics with regard to the number and proportion of men under your command by whom opium is used: will you kindly give us those figures?—I am informed that the number and proportion of men by whom it is used is as follows:—

	No. of men.	Proportion.
Cavalry	432	87.09 per cent.
Infantry	246	26.97 „

and that of these about 250 in the Cavalry and 50 in the Infantry take it regularly. The remainder only take it occasionally at irregular intervals varying from 2 or 3 to 15 or 20 days. Many take it regularly in the cold weather and discontinue it during the hot months. None, that I am aware of, take it to any great excess, and although it is impossible to ascertain exactly, I believe there are not more than 30 men who take more than 2 rattis (a little more than $3\frac{1}{2}$ grains) daily. The average consumption of the remainder of those who take opium regularly is one ratti (rather less than 2 grains) per diem.

17021. Have you ever known any instance of injurious effects from opium?—No, except on one occasion. A sentry was found sitting down on his post and said in his defence that he felt cold and had taken opium. On another

17003. (*Mr. Haridas Veharidas.*) As you are a Mahomedan, may I ask whether alcohol is prohibited in your religion?—It is prohibited.

17004. Is opium expressly prohibited in your religion?—It is prohibited if used for luxurious purposes.

17005. For improper purposes?—Yes, but it is not prohibited if taken for medical purposes.

17006. (*Mr. Wilson.*) At what age do the Sikh recruits usually come to the regiment?—Between 15 and 25 years of age.

17007. Are they opium-eaters when they come, or do they acquire the habit after they have joined the regiment?—They take to it subsequently, when they have some necessity for it, but they are not in the habit of using it when they come to the regiment.

17008. Are those Sikhs who take opium better soldiers than those who do not?—Those persons who take opium are more active and less inclined to laziness than those who do not take it.

17009. Then you think it better for soldiers to take opium than not to take it?—It does harm when taken in large quantities, but it does good when taken in small quantities.

17010. You said that there was some land on which no other crop would grow: why will no other crop grow on that land?—It is barren land where manure is used, and without manure, it would not bring forth any crop.

17011. Brackish land?—Brackish land.

17012. Without manure would it not bring forth any other crop?—A crop can be grown there if manure is used; but if a man cannot afford to use manure, no crop would grow there.

17013. Does poppy grow without manure?—Either the land should be of good quality or manure should be used, and it should be watered.

17014. (*Mr. Pease.*) Have you known any instances of persons who have found it difficult to break themselves of the habit?—I do not know of any instance.

17015. You say in the précis you have given us "confirmed opium-eaters can with difficulty break themselves off the habit": what do you mean by that?—A man cannot give up the habit unless he gets milk and such other things; if he does not get milk and such other things, then, of course, he cannot give up the habit.

17016. (*Sir William Roberts.*) Do you mean by confirmed opium-eaters excessive opium-eaters?—I mean both that a man has got the habit and takes to excess.

occasion I had sent a man up to Changla Gali for his Musketry class, and he was sent back for an insufficient knowledge of his work, and when I was asked why I had sent him, I replied that I had done so because I considered him an exceptionally intelligent man, and the only reason I could assign for his failure was that he might perhaps have been indulging in opium at the time, as I was informed that he did occasionally take it.

17022. Those are the only cases you can quote from your experiences of the effects of marked excess in the use of opium?—Yes.

17023. May I ask how long you have been in command of the Guides?—I am only officiating; I have been in the regiment for 23 years.

17024. And those are the only two cases which have come under your notice during a period of 23 years?—Yes.

17025. Can you suggest any reason why there is a much greater number of opium-eaters in the Cavalry than in the Infantry?—The only reason I can assign for it is that they are usually men who are better off and can afford it.

17026. Does it come to this with regard to opium, that where used in moderation it seems to do no harm, and where it has done harm it has been because it has been used in excess?—I should say so certainly.

17027. And in that respect you would compare opium with alcohol?—Yes.

17028. (*Mr. Pease.*) You say that the number and proportion was 87 per cent. of 482 men as against the 8 men we had in the 20th Bengal Lancers: how do you explain

Resalder-
Major Khan
Bahadur
Khan.

18 Jan. 1894.

Lieut.-Col.
F. D.
Battye.

Lieut.-Col. F. D. Buttye. the difference between the two regiments?—I really cannot explain.

17029. I understand that while in the 10th Bengal Lancers there are 8 men who take it habitually, in the Guides there are 50 out of 402?—Out of 469 total strength of the Cavalry about 250 take it regularly.

17030. You think that those 250 take it regularly all the year round, or are they winter consumers?—I should think only in the winter.

17031. (*Mr. Wilson.*) I am not sure that I quite understand: is your total force of Cavalry 469?—Yes.

17032. And what is the total force of Infantry?—912.

17033. How long have you been an officer in the Guides?—A little over 23 years.

17034. Have you had some communication with the medical officer on the subject of opium?—Yes.

The witness withdrew.

Resaldar Sundar Singh.

RESALDAR SUNDAR SINGH called in and examined (through an interpreter).

17040. (*Sir James Lyall.*) Are you an officer in the Guides?—Yes.

17041. How many years?—27.

17042. Have you served the whole time in the Guides regiment?—I served the first four years in the 4th Punjab Cavalry.

17043. To what extent is the habit of taking opium prevalent in your regiment?—It is considerably prevalent in two troops—there are about 40 men who take it habitually.

17044. How many men are there in a troop?—78.

17045. Besides those 40, are there any other men who take it occasionally?—Yes; there are some 30 or 40 in my opinion who take it occasionally—in a campaign or cold weather or on a journey.

17046. Have you seen any cases where a man has been seriously injured by the habit?—I have not come across any such case in my regiment.

17047. Do you think it does men good when they take it on a journey or in a campaign or in anything of that sort?—It does a great deal of good.

The witness withdrew.

Colonel A. H. Turner.

COLONEL A. H. TURNER called in and examined.

17057. (*Chairman.*) You are in command of the 2nd Punjab Infantry?—Yes.

17058. What is the strength of your regiment?—912 of all ranks.

17059. Is the use of opium prevalent in your regiment?—I believe that in the 2nd Punjab Infantry the use of opium is not prevalent to so great an extent as in some regiments; soldiers come to a regiment as young lads, and they naturally in such habits follow the custom of the regiment, as, though they have probably taken it occasionally at their homes, they are too young to have begun its systematic use. In the 2nd Punjab Infantry, which is composed of $\frac{2}{3}$ Sikhs, $\frac{1}{3}$ Dogras and $\frac{1}{3}$ Mahomedans (Punjabi Mahomedans and Pathans), its use is almost entirely confined to the Sikhs, of whom nearly all take it occasionally, and only perhaps 2 or 3 per cent. do so regularly; nearly all take it on such occasions as the following (1) When called on for any unusually sustained effort, such as a forced march. (2) When experiencing great cold and having to perform night duty in such. (Last winter when the regiment was in Kurram and snow lay around the tents for a fortnight or so, nearly all the Sikhs took it when on night duty.) (3) When suffering from bowel complaints or bad cold in the head. So great is the belief in its beneficial effects on such occasions, that men will go to any expense and take great trouble to obtain it, if they run out of the supply they have with them.

17060. As to the Sikhs, what is their habit with regard to opium?—The few Sikhs in the regiment who take opium regularly never do so more than once in the day, and not necessarily every day. There may be, perhaps, a dozen or so of Sikhs in the regiment in all who never use opium.

17061. What do you say as to the practice of the Mahomedans and Dogras with regard to opium?—The Mahomedans as a class do not use opium, but a few of

17035. Will you tell us what he has told you?—He tells me that in cases of pneumonia regular opium-eaters stand less chance of recovery than men who do not take it.

17036. (*Mr. Mowbray.*) Do many of the men in the Guides take alcohol?—No, very few, and not any in excess. I have no doubt they take it privately, but it never came before me.

17037. Have you had more trouble with alcohol than you have had with opium?—No.

17038. (*Mr. Wilson.*) May I ask what castes or tribes or races these men chiefly belong to?—Chiefly Sikhs. We have all classes in the regiment, but it is chiefly the Sikhs who consume opium.

17039. Both the Cavalry and Infantry are very much mixed as to race and caste, but those who take opium are chiefly Sikhs?—Chiefly.

17048. What kind of good?—Fatigued men by taking it are refreshed and strengthened.

17049. Supposing Government were to issue an order prohibiting the use of opium, what opinion would the soldiers have?—They would think that they had been subject to a great loss.

17050. Is there anything in the Sikh religion against the use of opium?—Nothing.

17051. Is there anything in the Sikh religion against the use of alcohol?—A person who takes it in excess is injured thereby.

17052. (*Mr. Mowbray.*) Do you take opium yourself?—I use it daily.

17053. For how many years have you used it?—From 1878, when the Afghan war commenced.

17054. How much do you take?—One ratti a day.

17055. (*Mr. Wilson.*) Is it a good thing for young men of 21 and 25 years of age to take opium regularly?—No.

17056. (*Mr. Pease.*) Do the 40 men in your two troops take opium all the year round or only through the winter?—Throughout the year.

them.—perhaps about 5 per cent.—will take it on such occasions as the above stated. Of the Dogras the same may be said.

17062. What quantity is usually taken?—The quantity consumed as a dose is about half a ratti.

17063. What is the length of your service with the 2nd Punjab Infantry?—26 years.

17064. Have you been frequently on active service with the regiment?—Yes, I have been many times on active service with it.

17065. Have you ever had occasion to suspect any ill-effects from the use of opium?—I can call to mind only one case of excessive use of opium among the men of the regiment, that was of a non-commissioned officer as gallant a soldier as ever walked, of splendid physique and capable of enduring great fatigue. I always knew he used opium, and probably in excess; when, if I remember rightly, about 40 years of age, he broke down suddenly and died at his home shortly after.

17066. With regard to the medical experience in your regiment, have you any information upon that?—I was told by Surgeon-Major Jackson, for many years in medical charge of the regiment, some years ago, that he had no doubt that opium taken during the premonitory symptoms of pneumonia, as some men were apt to do on feeling out of sorts, had a prejudicial effect, and complicated the case.

17067. What is your belief as to the effect of the use of opium in moderation?—I do not believe that the use of opium in moderation has any injurious physical effect whatever, and I am equally certain that its effect morally is equally harmless.

17068. Have you noticed any connection between the use of opium and crime?—I can call to mind no single

case of crime that was attributable to the use of opium, though every offence can be attributable, even amongst native soldiers, to the use of spirits.

17069. What do you say of native opinion in regard to the practice of taking opium in moderate quantities?—Natives do not look on the moderate use of opium as in any way a thing to be ashamed of; whereas a man who takes *charas* or *bhang* is considered as dissipated and not to be trusted; even the taking of spirits regularly is looked on by steady men as a thing to be ashamed of.

17070. Have you any instances that you can quote of remarkable health or longevity connected with an individual whom you knew to be in the habit of taking opium?—A short time ago I was talking with an old Sikh, Bedi Durbara Singh, who states that he is now 96 years of age, and I think his statement is correct, as he also says he was 50 years of age when he received a Jemadarship in one of the cavalry regiments raised after the Sikh war. He is still able to walk about without assistance, and converses intelligently with very little of the wandering from the subject one would expect; yet he tells me that after he was about 30 years of age he commenced to take opium regularly, for many years once a day only, but he has for many years now taken it twice daily, and still continues to do so; he showed me how much he took at a time, and it was just about the same amount as others tell me they take. Certainly the drug had in his case no pernicious effect, but, I should say, a beneficial one.

17071. What has been your practice in command with reference to putting a check upon the use of opium: have you ever thought it necessary to do that?—I have never endeavoured in any way to put a check on its use.

17072. And what have you done in regard to alcohol?—Alcohol I have discouraged by every means in my power, always refused to give any assistance in obtaining it, and I have always advised men to avail themselves of the issue of tea and sugar in the place of rum which is issued on service.

17073. You have had considerable service I presume in this part of India: what is your impression as to the view which would be entertained by the people of the Punjab of the prohibition of the use of opium?—I believe that amongst the people of the Punjab, to whom my experience is confined, any prohibition of the use of the drug would be the most unpopular act of which Government could be guilty; all those I have talked with on the subject, meet any suggestion of prohibition with a laugh and shrug of the shoulders, saying, "we know that enquiry is going on, but Government could never do such a senseless thing as that."

The witness withdrew.

SUBADAR NARAYAN SINGH called in and examined (through an interpreter).

17085. *Sir James Lyall.*) Where is your home?—Near Amritsar.

17086. How long have you been in the service?—I have completed 31 years' service.

17087. What classes of men are in your regiment?—Jat Sikhs, Dogras, Pathans and Punjabees.

17088. To what extent does the opium habit prevail in the regiment?—In the three Sikh companies of the regiment most of the men are accustomed to take opium on occasion, but in very small quantities and merely as a stimulant, in cases where great exertion is required, or as a medicine in dysentery and diarrhoea. At the same time there are some Sikhs in the regiment who have never taken opium, and who probably never will take it. When going away from the station, either on service or on detachment, most Sikhs would take one or two annas worth of opium with them to use in small doses whenever occasion might arise. On the other hand, several Sikhs do not take opium with them on such occasions. When a long march has to be performed, or whenever duty entails sleeping out in the open with little or no bedding during the cold weather, many Sikhs would take a small dose of opium by way of a stimulant.

17089. Do the Sikhs in the regiment generally take it habitually or only occasionally?—Sikhs in the regiment who take opium, as a rule, only take it occasionally, and then more as a medicine than any thing else. A very small percentage take it systematically.

17090. Is there any Sikh in the regiment who takes to excess?—I saw a man in 1885 whom I suspected to be taking it in excess.

17074. If the use of opium were prohibited, do you think it would tend to increase the use of spirits?—I feel confident that any prohibition or restriction of the use of opium would lead to a corresponding increase in the taking of spirits, and probably also of *charas* and *bhang*. *Colonel A. H. Turner.*
18 Jan. 1894.

17075. *(Mr. Pease.)* You state that one-third or three-eighths were Sikhs, that makes 114?—That makes 342.

17076. Excuse me, there are 342, and of those 2 or 3 per cent. are in the regular habit of taking opium; that is about six or eight men?—Six or eight men. Of course it varies. One can only take an average.

17077. Have you any idea of the quantity taken by this old man of 96?—Yes, something under a ratti twice a day, about two grains each dose.

17078. *(Mr. Wilson.)* There are about a dozen Sikhs in the regiment who never take any?—Yes.

17079. Do you know why?—I have asked some of them, and they have said it is not their habit; they have never begun.

17080. The use of opium in the 2nd Punjab Infantry is comparatively very small?—Comparatively very small.

17081. Would you be glad to see it increase?—I do not think I should disturb myself either way about it. I should not think there was any harm in the regiment if I found men using it more commonly. On the other hand I certainly should not take any steps to increase it.

17082. I think you told us that in severe weather a free issue of rum and tea is authorized?—I did not use exactly those words. I said I encouraged men to take tea instead of the rum.

17083. Is it optional which they take?—Yes; in severe weather when the issue is authorized each company sends in a requisition for so much rum or so much tea and sugar; each man pleases himself.

17084. *(Mr. Mowbray.)* You have told us that prohibition would be very unpopular with these regiments. It has been suggested that people who have been in the habit of consuming opium should be allowed to go on consuming it if they register their names as opium consumers. Do you think it would be very popular with the Sikhs in your regiment if before they got any more opium they had to register their names somewhere?—I think they look upon all these things as an unnecessary interference, and therefore I think it would be unpopular. I think these unnecessary interferences always give a lever to agitators.

17091. Is that man invalided or did he leave the regiment?—He died.

17092. What sort of dose do they take?—About half a ratti or one grain, and that too in cases of necessity when great benefit was expected.

17093. Do they never take more than half a ratti?—No; I have not seen them do so.

17094. In the villages where your people live, is the habit of eating opium common?—There are many people in the village who are in the habit of taking opium habitually. I am speaking of my own village only, but I can also speak of other villages in the tehsil where I have connections and where I have also seen people taking opium occasionally.

17095. Is the custom more prevalent in the villages than in the regiment?—Yes.

17096. Is that because the men in the regiment are young and have not begun it, or what is it?—The men in the regiment are comparatively young, and unless disease prevails young men take it only in case of necessity.

17097. Do the Mahomedans of the regiment eat opium?—Last year when I went to Kurram several Mahomedans, on account of the severity of winter, asked whether the Sikh Company had some opium with them. The Mahomedan Company was close alongside the Sikh Company, and many of the Mahomedans came and asked the Sikh Company for opium. On another occasion when we had marched on a foray for 26 miles, a few Mahomedans came to the Sikhs to ask for opium, and the Sikhs who had opium gave it to them.

17098. *(Mr. Mowbray.)* Have you ever taken opium yourself?—At the very least I have taken it about 100 times on occasions of emergency.

*Subadar
Narayan
Singh.*

Subadar
Narayan
Singh.

18 Jan. 1894.

17099. (*Mr. Wilson.*) How many companies are there in your regiment altogether?—Eight companies.

17100. You say that in the villages the use of opium is very general, do the women take it as well as the men?—I have seen a mother giving a very small quantity of opium to her baby immediately before suckling it.

17101. What I asked was whether the women take it themselves?—They do use it, though less frequently than men do.

17102. (*Mr. Pease.*) Can you assign any reason why the Mahomedans do not take opium as much as the Sikhs?—The Mahomedans do use it; the Mahomedans in my village use it as the Sikhs.

17103. Why do the Frontier Mahomedans not take it as much as the Sikhs?—It is the custom in this country, as

people begin to take it from childhood, and where this custom does not prevail, the people do not take it.

17104. (*Sir William Roberts.*) Why do not the men in the Sikh villages take opium as temperately and moderately as the soldiers in your regiment?—Some people in the villages take opium in larger quantities than they do in the regiments. In cases of necessity people in the regiment generally take half a ratti of opium, but in the villages they take a little more than half a ratti. This is due to the fact that men in the regiment are strong and stalwart, whereas men in the villages, even if they be young, are somewhat weak, and they require larger quantities. Many people in the villages take it daily, but I am speaking of those persons who are more than 50 years of age.

17105. Have you seen people in the villages injure their health from taking too much opium?—No.

The witness withdrew.

MAJOR J. W. HOGGE called in and examined.

Major
J. W.
Hogge.

17106. (*Chairman.*) Do you command the 14th Sikhs?—Yes, temporarily.

17107. How long have you been in the regiment?—Nearly 18 years.

17108. Will you give us the result of your observation in the regiment with regard to the habit of opium-eating?—I have never noticed any ill-effects at all, but from enquiries I have made I find that opium is not consumed to the same extent it is generally understood to be by Sikhs. So far as I have been able to ascertain not more than from 5 to 8 per cent. of the men of my regiment are habitual consumers of opium, and very few indeed take so much as five grains a day; the majority appear to eat about two grains daily. All natives, not Sikhs only, have very great faith in opium, and will take a small quantity, about two grains, occasionally as a stimulant against exhaustion or cold, and as a medicine for almost any complaint. Sikhs when using opium invariably eat it, smoking of any kind being absolutely prohibited by their religion. I have not found in my experience that opium has any ill-effects on those who use it. During the past nine months I have only found one man incapacitated from performing his duty owing to his being under the influence of that drug, and he, it appeared, was not only a confirmed consumer of large quantities of opium (18 grains or more a day), but used *bhang* or any intoxicating liquor or drug he could obtain, so that he cannot be considered a case in point.

17109. Have you mixed much among the civil population in this district?—Yes, I have been a good deal among the native States of the Punjab.

17110. Have you come to any conclusion as to the views they take in reference to the prohibition of the use of opium?—I have never made any enquiries on the subject.

17111. (*Sir James Lyall.*) I think you say that not more than 5 or 8 per cent. of the men of your regiment are habitual consumers of opium: do you mean that only from 5 to 8 per cent. admitted that they were consumers?—They were reported to me as such. I did not ask the men personally myself, but I made enquiries of the native officers.

17112. From native officers?—Yes.

17113. You do not think, perhaps, that they would underestimate?—I do not think so according to the manner in which I made my enquiries.

17114. The Sikhs in your regiment come from Ferozepore?—All Cis-Sutlej Sikhs.

17115. It has been a general idea that the Cis-Sutlej Sikhs were more in the habit of taking opium than any other Sikhs?—I have always heard that they were consumers of opium.

17116. You say that only 5 to 8 per cent. are habitual consumers, that is, men that consume every day?—Yes.

17117. Have you any idea what proportion take it from time to time?—I think every man in the regiment would take it occasionally.

17118. I suppose on occasions of long marches?—Long marches, or extreme cold, or feeling out of sorts.

17119. Having to camp out?—Yes.

17120. Have you ever found any crime in the regiment that you could attribute to opium?—None whatever, except the case I have quoted.

17121. Has any crime attributed to drink ever come before you?—Yes. The Sikhs are very fond of alcohol. I have occasional cases of drunkenness.

17122. (*Mr. Moubray.*) Did you ever find in these cases of drunkenness that the man had up for being drunk was an opium-consumer?—I never made the enquiry.

17123. (*Mr. Wilson.*) Do I gather from what you have said that the enquiries you have made recently have led to a conclusion rather contrary to your previous impressions on the subject?—Yes.

17124. You think that not more than from 5 to 8 per cent. of the regiment are habitual consumers?—Yes.

17125. Very few take so much as five grains a day; the majority appear to eat about two: I take it that you mean the majority of the 5 to 8 per cent?—Yes.

17126. Do you know the total number of the regiment?—912.

17127. (*Mr. Pease.*) Do you think the habitual consumers consume it all the year round, or only through the winter?—I think all the year round.

17128. (*Chairman.*) So far as concerns the army, may we take it from you that alcohol is much more serious than opium?—Among Sikhs, certainly.

The witness withdrew.

SUBADAR GURMUKH SINGH called in and examined (through an interpreter).

Subadar
Gurmukh
Singh.

17129. (*Sir James Lyall.*) Where is your home?—In the Fazilka District of Ferozepore.

17130. How long have you been in the service, and what have you to say as to the opium habit?—I have now over 21 years' service, of which period I have served over seven years in the 14th Sikhs. For the past 15 years I have been in the habit of using a small quantity of opium daily. I began the habit at Peshawar in 1878, in consequence of an attack of fever followed by diarrhoea, and I was decidedly benefited by taking opium at the time. I have not discontinued it since, as I felt it was doing me good in every way. For the first three or four years I used to take about 2½ grains only once a day, but since then I have taken the same quantity twice a day, morning and evening. I am of opinion that opium has

benefited me very greatly; changes of climate do not appear to affect me as they used to do. I always now have a good appetite and feel strong and well, whereas before I began eating it I used constantly to suffer from fever and diarrhoea.

17131. How many men are there in the regiment who habitually eat opium?—In the 14th Sikhs I do not think there are more than eight or nine men per company who eat opium habitually, and in the whole regiment I do not think there are more than three men who take it in excess, that is, from 10 to 20 grains daily. Opium, like anything else, is only bad when taken in excess, and those men who use large quantities appear to suffer from dullness of intellect, and weakness of body; they are unable to bear privations and fatigue as other men do. Nearly every man in the regiment will on

occasions of exhaustion, extreme cold or sickness, eat a very small quantity of opium, but they do not keep a supply by them, and cannot in any way be said to be habitual consumers.

No Sikh smokes opium in any form: the only way we use it is to eat it.

17132. Are you still in the regiment?—Yes.

The witness withdrew.

SUBADAR MAJOR WAZIR SINGH called in and examined (through an interpreter).

17135. (*Sir James Lyall.*) Where is your home?—In Patiala.

17136. To what regiment do you belong?—I have served most of my time in the 15th Sikhs.

17137. What do you know about the use of opium?—I have served in the 15th Sikhs for over thirty years, and was present throughout the Afghan, Suakim and Miranzai campaigns. I first took opium in the year 1871 on account of diarrhoea, and derived great benefit from it. I continued taking it for about a year, and then gave it up. The next time I took it was on the 24th March 1885, when serving in Suakim, and for the same complaint, and I have taken it regularly in small quantities ever since. I consider that I have derived great benefit from its use. When on service it is our belief that almost every man in the regiment takes a little opium on occasion and with the greatest possible benefit, as it enables them to bear cold and fatigue in a way in which they could not possibly bear it without the use of the drug. I believe it is also very efficacious in the case of men who suffer from weak eyes.

17138. Is the opium habit common in the villages you come from?—The habit prevails to some extent, but not much.

The witness withdrew.

The Reverend F. J. NEWTON, M.D., called in and examined.

17146. (*Chairman.*) You are a Medical Missionary I presume?—I am.

17147. What is your field of labour?—Ferozepore.

17148. Is that where you reside?—Yes.

17149. How long have you been in the country?—I came out in 1870.

17150. As a Medical Missionary, can you give us any indication of the extent of your practice among the native population?—I have been working in Ferozepore for about 12 years, and have there a dispensary hospital. There is an average attendance of from 10,000 to 12,000 a year. I frequently go out into the district, and am out amongst the villages a great deal, so that I come very much in contact with the people, and have had a good many opportunities of observation.

17151. Will you kindly give us any general statement you are prepared to make with reference to your observations as to the effects of opium among the people with whom you have been brought into contact, telling us to what extent you believe it to be used, and what results you can trace on the moral and physical conditions of the people?—I observed in the first place that it is used very much more among certain classes than others. I think it is used chiefly by the Sikhs in the Malwa District, that is the part of the country in which I live south of the Sutlej. My observation is chiefly confined to that part of the country, and there I have observed that it is used almost universally amongst the Sikhs. The Mahomedans use it very much less, and among the Hindus it is not used so largely, especially in the cities; but among the farming population it is used almost universally. The women rarely use it. I think the habit is usually begun medicinally. The people suffer a great deal from colds, coughs and fevers, and I think it is generally taken as medicine, and the habit begun in that way. It is often given to children. It is a very common practice to give it to babies to keep them quiet at night, but I do not suppose that has anything to do with the subsequent habit, because it is generally left off sooner or later. Young men often begin it as a remedy for coughs, and afterwards the habit fastens itself upon them. The quantity taken varies from two grains up to 30 or 40 grains. It is a very common practice to take from 10 to 20 grains a day, but there are many who take not more than 2 to 3 grains a day in two doses. The Sikhs generally carry a little tin-box with the opium extract in it, and they take a pill morning and evening.

17152. (*Mr. Mowbray.*) How old were you when you began to take opium?—Twenty-eight years of age.

17154. Can you tell me whether the 8 or 9 men in the company who take opium habitually are the older men in the company?—Persons who take it on account of disease do not pay any regard to age, but those who take it otherwise take it generally when they are about 30 or 40 years of age.

Subadar
Gurmukh
Singh.

18 Jan. 1894.

17139. Do the young men take it, or the old men, or what?—Generally persons of 30 or 40, or over; but there are some persons who take it for idle purposes. Some people have got a taste for that kind of thing.

17140. Can you tell us how much you yourself take?—Three *rattis* in winter and two *rattis* during the summer.

17141. Daily?—Yes.

17142. Are there many men in the regiment who take it habitually day by day?—About 70 persons take it habitually.

17143. Do any of them take it in excess?—One or two persons, but they are not in a bad state.

17144. (*Mr. Wilson.*) When opium is taken on active service, is it provided for them or do they provide it for themselves?—When we went to the Soudan we took 12 seers of opium with us.

17145. What did you do in the Afghan Campaign?—Then every one made arrangements to provide himself.

Subadar-
Major
Wazir
Singh.

The Revd.
F. J.
Newton,
M.D.

17152. (*Sir William Roberts.*) Is that opium extract something like crude opium?—Yes. They use it in both forms. The crude opium which is sold in the shops is in many cases diluted with other substances. They often put *goor* into it, a kind of coarse sugar, and the zemindars often buy opium, boil it down, and purify it, and make a sort of watery extract, which they use. As to the effects of it, it has been said that it is a prophylactic against fever. Fever is very common all through the country; but I have not observed that opium has any such effects. Fever is so universal, and during the fever season so many suffer from it, that I should think that if opium were a prophylactic against it the result at least would be visible. I have never observed that it has any such effect. I think it warms the system in cold weather. People take it very early in the morning during the winter, partly to warm themselves up, very like we take tea in the mornings. When taken in small quantities it has a stimulant effect; in larger quantities it is sedative as well as stimulant. In the smaller quantities I fancy it has a stimulant effect something like wine.

17153. (*Chairman.*) Could you from your experience say that the use of opium so far as you have observed in your district has been the cause of general moral or physical degradation?—I have been very much surprised to find that it has not those effects I have always been accustomed to believe. I find for example among the Sikhs, who are a warlike race, a strong race physically, that they take it in large doses for many years in succession. I have seen multitudes of old men who have been in the habit of taking it. I think one is very much struck in going into the villages in seeing the number of fine-looking, venerable Sikhs, who show no appearance of being in the habit of taking opium. The Sikhs never smoke, and I fancy that, as people will have some stimulant, they take opium in place of the *hooka* which all other classes use. When a man comes to the dispensary for treatment, I ask him, "how much do you take?"—I generally put it in that way rather than ask them whether they take it, for fear they should deny it and they generally say at once that they take so much morning and evening, but one would not suspect it at all from their appearance. As regards the moral effects I do not think it has any moral effects at all—I have not observed anything of that kind.

17154. Would you say that the use of opium amongst the people with whom you labor has not been in your experience a cause of hindrance to your labors as a Missionary?—Not perceptibly. I have never noticed anything of the sort.

*The Revd.
F. J.
Newton,
M.D.*

18 Jan. 1894.

17155. How would you compare the effects of opium in your district with those of alcohol: may I ask you whether there is much indulgence of alcohol amongst the people for whom you have laboured?—No; it is not a common thing at all; but comparison can hardly be made because the effects of alcohol are entirely different, and they are certainly very much worse than those of opium among those Sikhs who use alcohol.

17156. Have you had much intercourse with the people?—I have.

17157. Have you had the opportunity of forming an opinion as to how they would be disposed to regard the prohibition of the use of opium by the Government?—I think they would look upon it as a great hardship. It would cause a great deal of hard feeling and discontent.

17158. Have you any other observation of a general nature that you would like to make?—I think that we hear about the evil effects of opium are undoubtedly true, and I have been puzzled to know why those effects are not more visible. In a great number of years I do not remember coming across more than one who seemed to really suffer from the effects of it in the way in which we have been accustomed to expect.

17159. Would that be due to this circumstance, that the effects of opium depend upon the quantity taken?—Apparently not in every case, because many of these cases consume large quantities of it, and there is no appearance that they take it. My theory is simply that it depends either upon the race, that is, that it has different effects upon different races—or else upon idiosyncrasies in individual cases, or it may be it has a bad effect on people who take large quantities to begin with. But it is perfectly certain that in the great majority of cases it has no such effect at all, even with those who take large quantities. They live to an old age, and are strong and hearty. That is my theory. I have paid rather special attention to the subject for some years past.

17160. (*Sir William Roberts.*) What are the races in Ferozepore that you have to do with—I think you said Sikhs?—They are Hindus and Mahomedans and Sikhs very largely.

17161. How long have you been there?—Nearly 13 years.

17162. And you speak from your personal experience alone?—I refer only to that district.

17163. I think you mentioned that opium was often given to infants?—Yes, it is a very common practice.

17164. Have you ever known accidents to occur?—I have not come across any.

17165. I presume that opium is the commonest household or domestic remedy in your part?—It is. It is not only a remedy, but it is the common stimulant that is taken.

17166. I presume that is the reason that they are so accustomed to the use of opium that they know the risks and are able to avoid them?—I suppose that is so. They are accustomed to it.

17167. And you have not known of accidents amongst infants or adults?—I have never come across one.

17168. Is it a malarious district?—It is malarious, especially at certain seasons of the year.

17169. Is there much diarrhoea and dysentery?—A great deal at certain seasons of the year.

17170. Is it used as a popular remedy for those complaints?—Yes.

17171. Is it also used as a popular remedy in malarial fevers?—No, I do not think it is used as a remedy for fever.

17172. More for diarrhoea and dysentery?—I think that is the way it is used chiefly, and it is used very largely for coughs. People suffer almost universally from coughs.

17173. I think you said that so far as you know, and you can only speak from your own experience, it is not used as a prophylactic against fever?—I think not.

17174. Is there really any known prophylactic against fever, I mean truly speaking?—Only the common remedies, quinine and arsenic. They are prophylactic as well as remedies, but people do not use them.

17175. I suppose you have known people in spite of quinine and arsenic to have malarial fever?—Yes. People in the villages do not use them at all except when they can get them from dispensaries. They never use quinine and arsenic as household remedies. They know nothing about arsenic as a remedy for fever, but they have begun to know something about quinine.

17176. You distinguish of course between the use of opium as a household and domestic medicine and its use as a stimulant?—I distinguish that.

17177. Have you noticed in regard to the people you have had to deal with at Ferozepore that they are in the habit of increasing the dose commonly or only exceptionally?—I think they begin with a small dose, and increase it by degrees.

17178. To what extent?—Thirty or forty grains. Thirty is perhaps the limit, as a rule. I have known many persons to take forty.

17179. Would you say it was a common thing amongst the habitual users of opium that eventually they would reach that amount?—In a great many cases they do. I should think the average dose would be from 10 to 20 grains—perhaps not the average, but such cases are very numerous. I have come across a great many cases of old men who take up to 30 grains.

17180. What proportion of the adult population of your district are in the habit of using opium as a stimulant, roughly of course?—I could not say exactly;—I should say nearly half the population.

17181. Fully half the male adults?—I should think so. Among the Sikhs a great many more than that—nearly all of them.

17182. (*Mr. Pease.*) Have you any experience of smoking opium?—No. I observe that the Mahomedans are by far the most numerous of the inhabitants of Ferozepore: you speak of the district, and not the town?—The district.

17183. There are 354,000 out of 767,000; therefore there are just about one half: they do not consume so much opium as the Sikhs?—Not half so much.

17184. How do the Mahomedans compare with the Hindus as to the consumption of opium?—I think they take much less than the Hindus do. It is not so common a practice as amongst Hindus.

17185. (*Mr. Wilson.*) I think you said that there is a tendency to increase the dose?—I think there is a tendency that way and yet I have been surprised to find that a great many do not increase it. They will take a comparatively small dose all their lives, many of them do not seem to have a desire to increase the dose.

17186. Many of them do increase it?—They do. They get up to a certain limit, 20 or 30 grains, and there they stick to the end of their lives.

17187. Does not that tendency to increase the dose rather indicate that there is a somewhat abnormal and unhealthy state of body set up, which makes this tendency so common?—No doubt there is a tolerance of opium established in the course of time, so that the dose has to be increased. If the person wants to keep up the stimulant effects of it, he has to keep increasing it; and yet if one goes on taking the same dose without getting that stimulating effect which makes one a little more than normally brilliant perhaps, he can easily keep at that dose, and apparently still maintain a comfortable condition—that is, he does not feel the need of more. But if a man wants to keep that extra stimulus up, he has to increase the dose consequently.

17188. But there is necessity for increasing it?—If he goes on with the same dose for years, and finds he can use that without inconvenience, he does not feel the need of an increase.

17189. As a matter of fact, it is very commonly increased?—I think so.

17190. You said that it is frequently given to babies?—Yes.

17191. Do you think that is a good thing?—I do not think so.

17192. You told us the particular way in which you asked them about the quantities; you asked them, "How much do you take" rather than the question "Do you take it"; and you said you were afraid they might deny it: why would they be inclined to deny it?—I think when they come for medicine, they have an idea that if I asked them if they took opium I would naturally expect a negative answer, because in giving the medicine they would suppose if they were not taking anything already the medicine would do them more good, or I would be more apt to give them what would be good for them. I take that to be the reason. It is certainly not any feeling on their part with regard to the morals of the question. I do not think they have any such feeling.

17193. I think you have paid special attention to this subject; may I ask you how long?—I think it is about seven or eight years. It was when Mr. Brown was Principal of the Medical College here. He asked me to pay attention to it—it was at his suggestion I did it.

17194. May I ask you generally whether you think the habit of taking opium in small doses habitually is a good thing or an evil thing?—I should say they are better without it, as a rule.

17195. (*Mr. Monbray.*) You told us, I think, that a good many people who take opium began it medicinally?—I think so.

17196. Did you mean by that that they took it originally under order from a doctor, or that they took it because they felt that they had something the matter with them, and their friends told them it was good for them?—It is not from the order of a doctor at all. It is a family remedy—a household remedy. They take it as a remedy; but many begin it simply as a stimulant, as we take our tea in the morning. It is to them what our tea is to us in the early morning.

17197. I rather gathered from what you told Mr. Wilson that though you thought they were better without it, you did not think it did much harm?—In the great majority of cases I have not observed any harm. Occasionally I have had men come to me to help them to break the habit, because they said it produced constipation. That is the only thing I have ever heard complained of so far as I remember.

17198. (*Mr. Haridas Veharidas.*) I understand from what you have said that it is not desirable to take any quantity of opium if one can do without it?—One can do without it undoubtedly.

17199. (*Mr. Fanshawe.*) You have spoken of the Sikhs as being a warlike race: it is the case, is it not, that the Sikh peasantry are very hardworking, industrious and thrifty?—They are.

17200. So that the general use of opium among the Sikhs is quite compatible with the existence of those qualities?—It seems so. We have only facts to go on. I observe that they are the most thrifty and energetic part of the population of the Malwa.

17201. The general use of opium, therefore, which you have described, is actually compatible with the existence of those qualities amongst the Sikhs?—It certainly is.

17202. I want one other point a little clearer. You said that 50 per cent. or more of Sikhs would be in the habit of taking opium: would the use among that large proportion of the community be generally a moderate use?—It is what they would call moderate. I should say 10 to 15 grains a day perhaps. I cannot say exactly.

The witness withdrew.

RAI BAHADUR BHAI MIAN SINGH called in and examined (through an interpreter).

17215. (*Sir James Lyall.*) You are an Honorary Magistrate, I believe, and a Jagirdar and Zemindar?—Yes.

17216. What is the general opinion about the use of opium?—The general public are of opinion that the use of opium should not be prohibited, as the consumers, having become habitual in its use, will suffer from sickness if deprived of it. The use of opium is considered as a preventive for several diseases.

17217. For what diseases is it used?—Colds and rheumatic pains.

17218. What is the opinion of the people with regard to the proposal that the Government should prohibit the use of opium?—The people wish that the present arrangements should continue. I do not mean that the Government should not interfere in any way, but that interference with present arrangements should not be made at present.

17219. Is poppy cultivated on your land?—Opium is not cultivated in my lands. It was once cultivated by a

The witness withdrew.

Mr. DENZIL IBBETSON called in and examined.

17225. (*Chairman.*) I believe you are Deputy Commissioner at Jullundur?—Yes.

17226. What is the length of your service?—Twenty-three years.

17203. Would that quantity be the usual quantity commonly taken, or the quantity taken by a certain number only, a smaller proportion of the whole consumers?—I should think that that was the average dose of the majority.

17204. (*Chairman.*) Did you tell us, to what persuasion you belong?—I belong to the American Presbyterian Mission.

17205. (*Mr. Wilson.*) I think you said that you imagine the average quantity would be from 10 to 20 grains?—It is a mere guess. I have no statistics at all. I am just judging from the number of persons I questioned about it. I may be mistaken.

17206. Have you heard the evidence of the Subadar Gurmukh Singh, who was here just now, who called 10 to 20 grains excess?—I did not hear.

17207. (*Mr. Pease.*) The persons you have questioned have been usually those who have come to the dispensary with some ailment, I suppose?—Yes.

17208. No questions you have put to persons in health?—I have occasionally, but not as a rule.

17209. Therefore your estimate may be materially wrong in regard to persons in ordinary health?—I should not think so. These persons have come with certain ailments, and when I have asked them these questions in regard to the quantity they consume, the answer had regard to their habit, that is, the quantity they ordinarily consume whether in health or not. I remember in one village where I made special enquiries, I was told all the men but two took it, whether sick or well.

17210. No large proportion of them were persons suffering from chronic ailments?—I do not think so, nothing except coughs.

17211. (*Sir William Roberts.*) I think you said dysentery was common in your district?—Very common at certain seasons of the year; and diarrhoea.

17212. Have you observed whether any type or cases of dysentery would be connected with the opium habit?—I have not observed anything of that sort.

17213. (*Sir James Lyall.*) I think you said to Sir William Roberts that opium was not a prophylactic against fever: I should like to know whether you have ever heard the country people in the Ferozepore district talk of it as if it was a prophylactic?—I never have.

17214. (*Mr. Wilson.*) Have you at all observed that the opium-eating Sikhs are less subject to dysentery than the Mahomedans or other classes that do not take it? Have you noticed any difference in regard to the liability to dysentery?—No, I have not noticed any difference at all.

cultivator on about one bigha of land: but, owing to heavy duties, the cultivation was discontinued

17220. What duties do you refer to?—To canal dues.

17221. Is there any section of the population in Lahore, in the villages or towns, who wish to see the use of opium stopped except for medical purposes?—Those persons who consume it at present do not wish that it should be stopped for any purpose.

17222. And the other people?—Those who use it as medicine are willing to use it as medicine only.

17223. They do not want any interference?—The interference may be greater than at present, but not less than at present.

17224. If it was prohibited, and to meet the loss of revenue extra taxation were imposed, what would the people think?—They would consider it a double hardship. In the first place they would be deprived of a thing to which they are accustomed, and in the second place they would be liable to pay extra taxes.

*The Revd.
F. J
Newton,
M.D.*

18 Jan. 1894.

*Rai
Bahadur
Bhai Mian
Singh.*

*Mr. Denzil
Ibbetson.*

Mr. Denzil
Ibbetson,
18 Jan. 1894.

17228. Has there been a large consumption of opium in any of the districts in which you have served?—I can hardly answer that question. I practically know nothing about the subject. I have served in districts in which I have known it is eaten by a large proportion of the people, but I know no details.

17229. As you have lived in districts in which, as you believe, opium has been extensively consumed, and you have not observed any effects, what inference do you draw from that?—The conclusion I draw is that opium-eating is very much like tobacco-smoking among the sections of the people who use each in the districts in which I have served. There has been nothing more to draw my special attention to the one case more than to the other. This would be impossible, were the effects of the use of opium such as they are commonly believed to be by the people of England.

17230. Are there other social and moral evils which came under your observation here, which, in point of gravity, considerably exceeds any evils which may possibly arise from opium?—I am constantly receiving petitions in which the habit of gambling, of drinking, or of whoremongering is alleged to the discredit of an individual; but can recall no instance of the habit of using opium being similarly brought forward as involving a social or moral stigma.

17231. It has been proposed for the consideration of this Commission that the Government of India should put an interdict on the use of opium for other than medical purposes—what remarks have you to make upon a policy to carry out that proposal?—I am of opinion that to prevent the use of opium for non-medical purposes would be impossible. Such a prohibition must either be ineffective, or practically a total prohibition. If you allow Hakims to give a license for the use of opium by prescriptions, your prohibition will be ineffective. If, on the other hand, you do not give that power to Hakims, there are, for instance, in my district, with a population of a million of souls, only two persons to whom that power could be given, and those two persons live in the same place. In that case prohibition would be practically absolute. It would also be impossible for this reason: if you do not stop the cultivation of the poppy in British territory, you will have corners of land occupied by poppy on every well in the place, and it would be impossible to prevent opium being made on the quiet, and still more the poppy-heads being used. If you do prohibit the cultivation of the poppy in British territory, you could hardly do so in Native States, and it would be impossible to prevent the smuggling of a drug, an ordinary dose of which is measured by grains.

17232. There is no natural or physical frontier dividing the Native States from these which are under our Government?—None whatever: it is largely smuggled already, I believe.

17233. That is on the point of practicability. Now as regards the political consequences arising from a policy of prohibition?—If the prohibition were successfully enforced, it would produce, if not rebellion, at least such discontent as would constitute a serious political danger, since it would be regarded as a wanton interference with private life, with no good end to justify it. I think that for four reasons: In the first place, you have, supposing you do not give Hakims power to prescribe opium, three systems of medicine current in the country, all three of which agree in looking upon opium as a useful medicine. You would say to the people: "The drug which is prescribed by the doctors of the system of medicine in which you believe, you shall not have unless you can get the concurrence of a doctor of the system of medicine in which you do not believe." You would also be interfering with a domestic comfort and luxury which is used by a considerable proportion of the most warlike races in the Punjab. To make your prohibition effective you would require persistent inquisitorial search, and you would let loose a number of ill-paid officers, and thereby you would render false accusation and extortion more

easy. You would make what is looked upon as a harmless indulgence into a crime. The fourth reason is that when the Government introduces a measure, which the people look upon with disfavour, they come to us and ask us what is the reason of it. We generally have some reason to give them, even if we do not approve of it ourselves; at any rate we can give the Government view of it. But I do not see what justification we could give here. We could say it was thought that evil effects were produced. They would say, "Do not you and the Government know that they are not produced?"—and I do not see what answer we could give. They would look upon it as a most tyrannical arrangement—an interference with private liberty without even such justification as exists in other matters, such as sanitation and vaccination.

17234. From what you have said it follows that if fresh taxation were imposed to compensate Government for the loss of revenue, it would not be received with favour?—No; certainly not.

17235. (Mr. Fanshawe.) I should like to ask you a question about the Sikhs. Would you kindly tell us shortly what are the divisions among the Sikhs?—The Manjha is the central portion of the Punjab, lying east and south-east of Lahore, including the Lahore, Amritsar, and Gurdaspur districts. The Malwa is the great tract south of the Sutlej, including the Ludhiana and Ferozepore districts and the great Sikh States. Roughly speaking, the Manjha is Trans-Sutlej Sikh territory, and the Malwa is Cis-Sutlej Sikh territory.

17236. Will you also explain what a Mushee Sikh is?—He is a sweeper—almost, if not, quite the lowest form of outcast—who has adopted the Sikh religion. He is as good a Sikh as any of them, but the taint of his hereditary occupation adheres to him; and although he does abandon, I believe, some portions of it, still the other Sikhs will not mix with him, even in religious worship.

17237. As regards the consumption of opium by these different classes of Sikhs, can you tell us whether the habit is more common among one class than another?—I cannot say that in the least.

17238. (Mr. Mowbray.) I should like to know what class of Sikhs reside in the Jullundur district?—Mostly Jat Sikhs.

17239. Is not the Jullundur district one of the seven large opium-consuming districts in the Punjab?—I fancy it would be one of the largest.

17240. (Mr. Wilson.) Does your evidence relate chiefly to Jullundur, the district in which you are now Deputy Commissioner?—I know Gujranwalla better than Jullundur.

17241. Is that adjacent?—No; it is the other side of Lahore. It is also a Sikh district, but I speak for both.

17242. Is there any poppy cultivation in your district?—Yes.

17243. A great deal?—Yes, a good deal, I think. It is one of the five or six largest cultivating districts in the Punjab.

17244. You said that you were constantly receiving petitions about gambling and so forth to the discredit of the individual, what does that mean?—It means that some man has got an appointment, and somebody else wants it generally; or if an appointment is empty and two men apply for the post, one man will give a petition to the discredit of the other. Perhaps most often of all the petition is anonymous, and to the discredit of an enemy.

17245. Do you at all share the opinion that was expressed to this Commission recently, that if persons connected with the native press, natives especially, write in, what may be called, an anti-opium sense, that is any indication of disaffection towards the Government?—No; I should say not in the least necessarily. One might write against opium, so as to strongly express disaffection, but the mere fact of an article being written in an anti-opium sense does not necessarily show disaffection at all.

The witness withdrew.

The Revd.
J. P. McKee,
D.D.

The Reverend J. P. McKEE,

D.D., called in and examined.

17246. (Chairman.) I think you are a D.D., and work in connection with the United Presbyterian Mission of North America, and you are stationed at Sialkot?—At present at Sialkot. I was 23 years in Gujranwalla.

17247. In that district how is the population distributed as between Hindus and Sikhs?—The Mahomedans are in the majority, Hindus come next, and Sikhs third.

17248. What is the habit of the Hindu and the Sikh portion of the population with reference to opium?—I

would say that a very large percentage of Hindus and Sikhs of the age of 40 and over use opium, perhaps 60 per cent. over that age.

17249. What was the percentage of consumers of opium among the Mahomedans, and what may be described as the depressed classes?—It is very much lower,—I should say not more than 20 per cent.

17250. What was the effect of the consumption of opium on the moral and physical condition of these people?—The

consumption of opium on the moral and physical condition of the people, so far as I could see, was scarcely perceptible, except in a few cases, and in these cases, where they were injured by the use of opium, they were moral and physical wrecks I should say, but in 23 years I have not met more than seven or eight cases that I would so describe.

17251. Speaking of the non-medical use of opium generally, how do you regard it, and how do you compare it with indulgence in alcohol?—I would say that the non-medical use of opium is an evil, but not to be compared with alcohol at all, because you do not find that it fills poor-houses with paupers, or jails and penitentiaries with criminals as alcohol does in Great Britain and the United States.

17252. Have you found that the effects of opium have stood in your way in your spiritual work as a missionary?—No, I should think not. The truth is that up to the time that this subject began to be agitated in the papers, we knew very little about it, because it did not affect our work at all, and the effect of it was not perceptible on the moral or physical condition of the people. It is only after I began to make strict enquiries in regard to it that I knew what proportion of the people used opium, because there was no perceptible effect except in those few cases I mentioned.

17253. You would say that your observation leads you to conclude that the use of opium, so far as it exists, has not been the cause of extensive moral and physical degradation in this district?—Not so far as my observation goes.

17254. Supposing the use of opium to be prohibited, as it has been proposed, for other than medical purposes, how do you think the people would view such a restrictive measure?—I think in that district the disposition of the people in regard to the use of opium for non-medical purposes might be described as passive. I think there are very few who wish for prohibition, and I think there are very few who would give trouble if it was prohibited. They seem to think very little about it, so far as I know from talking to the people.

17255. In the present state of the movement they seem to be passive?—Yes.

17256. Supposing prohibition to be actually enforced, what do you think their attitude would be then?—If it was actually enforced, I think those who use it now would try to get it in some other way. It would very likely be smuggled in. I think they would try to get it, but I do not think it would raise any political disturbance so far as my knowledge and experience of the people is concerned. With regard to the other section who do not use opium, I do not believe any section of the people feel strongly

enough on the subject to be willing to bear any part of the cost of prohibitive measures. They do not feel strongly enough in the matter. *The Recd. J. P. Mikee, D.D.*

17257. If taxation were associated with prohibition, you think it would be unfavourably received?—It would. 18 Jan. 1894.

17258. (*Mr. Moubray.*) Is Sialkot a district in the Punjab where opium is consumed much?—I do not know much about Sialkot, because I have not been so much associated with the people there as in Gujranwalla. I was associated with the people there for 23 years; but although I reside in Sialkot now, my acquaintance with the people is in Gujranwalla.

17259. The consumption in Gujranwalla is larger than in Sialkot, but it is not large?—Very small.

17260. So far as the opinion of the people goes, I do not suppose they would look upon the question of prohibition as a very practical question, would they?—They have not simply thought of it at all. It is not a question among the people. It is only since this Commission arrived in India that the question has been talked about among the people, and even now 90 per cent. of the people know nothing about it.

17261. Therefore you can hardly form an opinion as to what their feelings would be if, to their surprise, they found it was prohibited?—No, except that I have talked to them lately, and they seem careless.

17262. (*Mr. Wilson.*) I suppose your evidence only relates to this part of the country with which you are acquainted?—That is all.

17263. Of course what you know about this part of the country would not lead you to form any opinion about Assam and other districts in India?—I have not the slightest notion of any other parts of the country except in the one I have referred to, because it is the only place where I have been associated intimately with the people.

17264. Would your general knowledge of India lead you to think that it might be possible to adopt some form of what is called in England in reference to alcohol local option or local veto, so that in a district in India where there was a strong feeling against opium it might be prohibited, whilst in other parts it might not be prohibited—would that be possible?—I think it would be quite possible to prohibit it in some parts of India. I think it would be possible to prohibit it in Gujranwalla, because, as I say, the people there seem quite passive, but I really have no opinion on that subject.

17265. (*Mr. Fanshawe.*) I understand you to mean that you wish your views to be taken as only applicable to the Gujranwalla district?—That is all.

The witness withdrew.

SURGEON-MAJOR W. COATES called in and examined.

17266. (*Chairman.*) Are you stationed at Lahore?—Yes. My personal experience of the use of opium for purposes other than medical is very limited, and chiefly negative in character. I served through the two Afghan Campaigns of 1877-1880, and was for most of the time in charge of Field Hospitals for Native troops and followers, and came into close contact with some thousands of sick men—the invalids of a very large force. Most of these were camp followers, men who were badly clothed, fed, and lodged, and who had exceptionally hard work in a rigorous climate. Very many of them were said to be, and I believe were, opium-eaters, but I can only recall to mind one solitary case in which disability was distinctly due to the habit. The patient was a mule-driver, to whom large doses of opium had to be given before he could do his work. After this campaign I was for several years in charge of Peshawar, where the opium habit is not common. Many prisoners admitted into the jails, of which I have been in charge, claimed exemption from work, and sometimes asked for a daily dose of opium, saying they were addicted to its use, but I never gave the ration, and very seldom let them off work, and I do not remember any case where serious ill-effects followed. I have also been in civil medical charge of Murree and Simla, where I knew very many men of the clerk class said to be opium-eaters, and can only remember one that was decidedly the worse of the habit. My experience of the Lunatic Asylum is too short to enable me to form an opinion as to the frequency of the opium habit among the insane prior to admission.

17267. (*Sir William Roberts.*) Where were the jails situated that you had charge of?—In Lahore, Peshawar, and Chinawan.

17268. On admission into jail did you stop the supply of opium at once?—Yes.

17269. And you never saw any ill-effects?—No, I never remember any ill-effects.

17270. You said that you very seldom let them off their work, that implies that you did sometimes?—Sometimes, when they were in bad health.

17271. Independently of the opium habit?—Independently or not, if they were in bad health from any cause.

17272. Did you not observe any great suffering in any case of an habitual opium-eater when his opium was stopped?—No, not in any case.

17273. Have you formed any idea as to what is the cause or the reason why the natives of India seem so much more tolerant of opium, and become addicted to the opium habit as compared with Europeans?—Not a very definite idea.

17274. You have no idea whether it is due to the climate or diet, malarial conditions?—I could not say at all.

17275. (*Mr. Wilson.*) There has been a great deal of discussion before this Commission with regard to opium being used as a prophylactic against fever: what do you say with regard to that?—I have no experience with regard to that.

17276. You have never used it in that way?—Never used it in that way.

17277. You have never prescribed it either to natives or Europeans?—Not as a prophylactic against fever.

17278. With reference to these camp followers who are opium-eaters, was your attention directed at the time to

Surgn.-Maj. W. Coates.

Surgn-Maj. W. Coates.
18 Jan. 1894. the fact that they were opium-eaters, and did you specially note them in any way on that account?—I did not note them in that way, but I was told that they were opium-eaters by a native assistant in the hospital who knew a great deal about them. I did not see them eat opium myself, but I was told they all eat opium, and that they all had opium with them. I saw the opium with some of them, but not all.

17279. You did not pay that kind of attention to them that you could tell us at all whether those who took opium were better or worse than those who did not?—I have not recorded it, but when a patient was in hospital I always asked the question whether he was an opium-eater, with a

view to finding out whether his disease was affected by the habit.

17280. You did not find that it was?—No, I did not see that they were generally the worse for using opium. There was no marked difference between those who did use opium and those who did not.

17281. (*Sir William Roberts.*) Have you formed any idea whether the habit of using opium is useful in any way to natives of India living in malarial districts?—No, I have not been in any district that was very malarial and where the natives did use opium generally, so that I have had no grounds to form an opinion.

The witness withdrew.

SURGEON-CAPTAIN R. HAVELOCK CHARLES, M.D., called in and examined.

Surgn.-Capt. Charles, M.D.
18 Jan. 1894. 17282. (*Sir William Roberts.*) What opportunities have you had of studying the use of opium amongst the natives of India?—On my arrival in India in 1882 I was attached to the 32nd Punjab Pioneers, a Sikh Regiment, in which at that time were a considerable number of opium-eaters. Subsequently, 1884—1886, whilst in medical charge of the escort and half Field Hospital on the Afghan Boundary Commission, I had an opportunity of observing Sikhs under the hardships of what was practically service. There I also saw many hundreds of camp followers—Punjabis and men from the North-Western Provinces. Opium was for sale in the Camp Bazar, and there was a fair trade in it, the consumers being drawn from the foregoing. Since 1886 I have been attached to the Mayo Hospital, Lahore, where numbers of individuals addicted to opium, *ganja* and alcohol are treated yearly. In private practice in Lahore the cases that I have seen have not been those of the opium habit, but rather of the abuse of opium in children. The confirmed opium-eaters that I have known have been either Sikhs or low caste Hindus—sepoys, sowars, kahars, camp followers, beggars and fakirs.

17283. What has been your experience as to the circumstances under which the opium habit generally begins?—I believe the practice generally begins from one or two causes—first, to ease some pain or ache, or to solace in mental anxiety, or under illness; secondly, as an aphrodisiac.

17284. Have you formed any opinion as to whether the effect of opium on natives of India is an aphrodisiac, or is it only one of the many aphrodisiacs that they have?—It is one of many. It is also used as a stimulant.

17285. This aphrodisiac effect would only be part of a general stimulant of the system?—Yes.

17286. Would it have any unfavourable effect?—Not that I know of, but that it is used as such I know.

17287. What has been your impression with regard to the use of opium for non-medical purposes—its effect on the physical and moral condition of the natives of India?—I do not believe that the physical condition of a healthy man would be improved by the continuous use of opium.

17288. Would you express the opinion that the physical condition was deteriorated by it?—I should certainly say it would not be improved.

17289. What about the moral condition?—The moral condition of an opium-eater—that is, a confirmed opium-eater—is affected as far as that he has practically lost his power of self-control—the opium habit being his master.

17290. Do you mean by confirmed habitual eaters those who take it in excessive quantities?—I mean a man who has made it a habit for many years or months, taking a continual daily dose of opium. Under ordinary circumstances he would not give it up.

17291. You speak of the power of self-control only as regards the opium habit, not with regard to his conduct generally?—Not with regard to his conduct generally.

17292. You say that whether he takes a small quantity or a large quantity?—Yes, that is, when he has once become accustomed to feel the effects of the drug he would wish for it.

17293. You think the habitual opium-eater, whether in large or small quantities, is in a worse case than that of a smoker or drinker of alcohol?—That would be a matter of opinion. The cases I have seen myself, and the histories that patients have told me, have led me to believe that the opium habit is much stronger than any other habit generally.

17294. Have you had any experience in jail management?—No, I have been in jails to visit them, but I have not been in charge.

17295. You have had no experience of what occurs when prisoners are suddenly deprived of their opium?—No.

17296. Do you think that opium sometimes prolongs life?—Most undoubtedly I do think that many, in whom there is some unsoundness, are enabled by its use to continue life under more bearable circumstances.

17297. Is the habitual use of opium as deleterious in your opinion as the use of *ganja* and alcohol?—I do not think that the harm caused by opium to the people generally can be compared to that due to *ganja* and alcohol. I should, for personal reasons, rather treat a patient addicted to the former than to the latter, though it was my experience when old sepoys—opium-eaters—came into hospital with pneumonia, that the mortality was high—higher than usual.

17298. What do you mean by personal reasons?—If I were treating a patient for delirium tremens I should have a great deal of trouble in the hospital. I should have to have special warders to look after the patient. I should be more afraid of suicide. Whereas, if he were an opium patient, he would be less of a nuisance to other people and to me in particular. The most unpleasant cases to treat are those of delirium tremens.

17299. You said that the mortality among the old sepoys who used opium was higher than usual? Was it higher than those who did not use opium?—So it struck me.

17300. Have you had experience of the use of opium on children?—I have frequently seen the deleterious effects of opium upon children.

17301. Are you speaking of the children of natives of India?—Both Europeans and natives.

17302. What deleterious effects have you seen in cases of the children of natives?—I have seen children brought into hospital in a moribund condition.

17303. Due to opium?—Due to opium-poisoning. They were under the influence of opium.

17304. Did you consider that it was owing to an accidental dose—too much given by accident?—Probably so.

17305. That would be more analogous to a case of opium-poisoning?—Yes. Most of the cases that I have seen have been cases of opium-poisoning.

17306. Have they been at all numerous?—Not very numerous, but I have seen a few cases now and again.

17307. Would they be more numerous than such cases which occur in England?—Probably not.

17308. I suppose you mean the cases that are brought to you in the hospital would be the result of a single overdose, not from the habitual giving itself?—No, probably from a single overdose. The habit may have been continuous and the dose increased for some cause or other.

17309. What do you consider the effect of the use of opium generally?—I consider opium one of the most valuable of drugs. It is a food to none, but a solace to many. I would to the best of my ability prevent a friend taking to the habit of opium-eating.

17310. Why would you?—Because, as I said before, it would have an action on his moral condition; he would be taking something that would master him. I consider the perfect man should be master of himself. Once a man contracts the opium habit, the habit will be master of him.

17311. Would you also not add, independent of that, that the opium habit was like the alcohol habit, a habit attended with the risk of going to excess?—Most decidedly it tempts a man to excess more in opium than in alcohol. Every little trouble of life that he has to bear, he

would endeavour to avoid because having contracted the opium habit he escapes his troubles by taking a pill of opium now and again.

17312. In that case it is useful?—No, in my opinion it is the contrary, because the little troubles of life will strengthen him by his overcoming them.

17313. Is there a general tendency so far as your experience has gone among the habitual users of opium to increase the dose?—I could not exactly say that. I have known a number and have heard of a great many who have continued for years to take the same dose. Others I have met who have gone on increasing, but I think Europeans go to greater excess than natives.

17314. Have you known many Europeans who have taken up the opium habit?—The morphia habit I have known.

17315. Not the opium habit?—I have known some.

17316. How many?—A few, not a great number.

17317. Half a dozen?—Probably, that is in India.

17318. You are not speaking of Europeans in England taking up the habit?—I have known a few Europeans in England.

17319. Half a dozen?—No.

17320. Do they take to the habit in the form of eating it or what?—Eating it in the form of a pill to ease pain.

The witness withdrew.

Mr. E. B. FRANCIS called in and examined.

17329. (Chairman.) You are Deputy Commissioner for Ferozepore?—Yes.

17330. How long have you served in the Punjab?—Twenty-one years.

17331. You have come here more particularly to speak of Ferozepore?—Yes.

17332. How do you describe the population in the greater part of that district?—The district consists of two parts, a strip along the river in which the population is almost entirely Mahomedans, and the interior part of the district in which the population is mainly Jat Sikhs. I see from the Census figures that the Sikhs are, as a matter of fact, only one quarter of the whole population, but they are the leading sect, and therefore I have described the population of that part of the district as mainly Jat Sikhs.

17333. Is the habit of the eating of opium prevalent in your district?—The habit is prevalent amongst the Sikhs, and exists to a certain extent amongst other Hindus; but to a very small extent amongst the Mahomedans, as far as I am aware.

17334. What was the result of your observation with regard to the effects of the eating of opium?—The effects are, not apparent so far as I have seen, unless in cases where a man has been taking opium to an excessive extent, and that is usually the case only when he has been taking it also for a considerable length of time: by that time he will usually be an old man.

17335. You say the excessive use produced bad effects, sufficiently grave to make themselves visible. What do you say as to the moderate use? Do you think it does good or harm, or do you think it is one of those habits which may be indulged in to some moderate extent without any effect, good or bad?—In moderate quantities certainly. I should regard the habit as perfectly indifferent, quite harmless—as much as tobacco.

17336. With regard to the moral effects from the opium habit, what do you say as to that?—I should regard them as closely connected with the physical effects. At the same time that it produces physical weakness, it produces mental and moral weakness and want of energy, especially at the time, I should say, when the man has not had his usual allowance. When he is under the influence of the dose he is as good as any man. It is when the re-action takes place that he is deficient in mental and physical qualities, and possibly in moral power, though that is more difficult to speak to. A man who is in the constant habit of taking large doses of opium to keep him up to the mark is certainly, taking him all round, less efficient than the man who does not, although after taking his dose he may be able to do his work perfectly.

17337. Do you apply that last observation to what you call consumers in excess?—Entirely to consumers in excess. A moderate consumer is neither the worse nor the

17321. Did they bear the habit as well as the natives, or were they injuriously affected by it?—In one particular case that I can call to mind, after having used it for some time, an attempt was made to break the man of the habit. For about two months he had a very severe struggle. He is all right now.

17322. He did throw off the habit?—Yes, he did.

17323. (Mr. Wilson.) What do you think about opium as a prophylactic against fever?—I have never as a custom used it as such. I may have used it now and again. I have not used it as a common drug, the same as quinine. I have ordered for patients in hospital some time before the onset of ague about 30 drops of laudanum.

17324. How much is that?—About a grain and a half to two grains.

17325. That was with a person suffering from ague?—Yes, but in such a case I always gave quinine.

17326. As well?—Yes.

17327. I gather from what you say that you regard opium as more insidious than alcohol, more liable to lead on?—That is merely my opinion.

17328. (Mr. Mowbray.) I suppose you admit it is quite possible for persons to take opium without being led on to such a condition that the habit becomes their master, or, in your own words, that they lose their self-control?—Yes, I think it is quite possible.

better for the habit, as far as the ordinary observer can see.

17338. What are the facts in your district with regard to the cultivation of poppy?—It is a very small area. I see from the statistics it averages something like 100 acres; it is of no importance.

17339. Is there any portion of your district specially feverish?—Yes, the riverside is very feverish.

17340. In that district does the population resort particularly to the use of opium?—No; in that part of the district the population is mostly Mahomedan, and it is not a habit with them to take opium.

17341. It has been proposed to prohibit the use of opium except for medical purposes. Do you see any practical difficulties in the way of such a restrictive policy?—Every possible difficulty. The prohibition of opium in Ferozepore could not be carried out unless the production of opium were stopped in the Native States of Malwa and Rajputana; otherwise the demand would certainly be supplied by smuggling. The frontier of the district being an irregular line of over 200 miles in length, not even a regiment of preventive officers could stop smuggling. There is, in my opinion, no more need for such a measure as the prohibition of opium than there is for the prohibition of tobacco, and much less than for the prohibition of spirits, although even spirits do not cause one-hundredth part of the mischief here than they do in England. I consider that the prohibition of opium would be regarded by the Sikhs as a one-sided measure directed against themselves. They would ask why it was not accompanied by the suppression of the Mahomedan's tobacco, which is a narcotic forbidden to the Sikhs. It would never be believed that such a measure could proceed from philanthropic motives, and consequently the popular voice would assign other motives, primarily a desire on the part of the Government to push the sale of European liquor, if nothing even worse were thought of. Any law rendering the possession of opium in small quantities illegal and leading to a search by the Police or other subordinate officials would be strongly resented, and would cause the most dangerous irritation.

17342. What have you to say with regard to the revenue question?—There is no other source of revenue which could be substituted for that brought in by opium.

17343. (Mr. Pease.) Would you wish to see an extension of the consumption of opium to bring in more revenue for the purposes of irrigation, etc.?—Certainly not.

17344. I suppose you would be favourable to a reduction in the consumption of opium?—I should not be sorry to see a reduction if it occurred of itself. I should be extremely unfavourable to a forcible reduction.

17345. Do you think any means could be taken to encourage the people not to pursue the habit?—No, I do not think so.

Surgn. Capt.
Charles,
M.D.

18 Jan. 1894.

Mr. E. B.
Francis.

Mr. E. B. Francis. 17346. You think the facilities for obtaining opium are not more than sufficient or desirable?—No, they are only such as are absolutely necessary. The number of shops in the Ferozepore District is about 1 to 5,000 of the population, and the facilities are certainly not more than necessary, if the consumption is to be allowed under Excise law.

17347. (Mr. Wilson.) As far as you know, is opium in common use as a prophylactic against fever?—Not so far as I have seen; in fact I may say it is not used for that purpose in the Ferozepore District. It is used in the case of colds and chills, but not for malarious fever.

17348. (Mr. Mowbray.) What do you say with regard to the tendency to increase the dose?—The tendency to increase the dose is not very marked: a man usually keeps for years to the same quantity to which he has accustomed himself, but some require much more than others to produce the same effect. There is a tendency no doubt to increase the dose, but not a universal tendency. A man may frequently keep on the same dose for years, but on the other hand, there are many men who find, perhaps from some peculiarity in their temperament, that the usual dose is ceasing to have its effects, and they increase it.

17349. You have been Settlement Officer in a district in which opium is largely consumed?—Yes, in Ferozepore. I think Ferozepore and Amritsar are on an equality; they are about the largest consuming districts in the Punjab.

17350. Have you ever had, as District or Settlement Officer, to remove any subordinate for incapacity through the use of opium?—I have only once, so far as I remember, had to remove a subordinate for incapacity due to opium, and the man in question was about 50 years old, as indeed have been all the cases in which I remember noticing serious ill-effects. A man, so far as I have been able to judge, does not commence the habit until he is 35 or 40 years of age, and if he increases the dose gradually to an excessive quantity, he will then be an old man and be getting to a period of life when not much more work can be expected of him.

17351. (Mr. Fanshawe.) I suppose, as Settlement Officer, you have had special opportunities of being brought into close relations with the people?—Yes.

The witness withdrew.

MR. J. WILSON called in and examined.

Mr. J. Wilson. 17363. (Chairman.) You are the Collector at Shahpur?—I have been for seven years.

17364. Where was your previous service?—In the Gurgaon, Rohtak and Sirsa districts.

17365. Was there much consumption of opium in those districts?—In none of those districts was there a large consumption. In the Sirsa district there were Sikhs who consumed opium as in the other parts of the province, but very few compared with the population of the district.

17366. Speaking of the Punjab, so far as your experience goes, what was the proportion of the persons who consumed opium in excess, compared with the total population?—In the whole of the Punjab not one in a thousand consume opium to excess.

17367. Were those who consumed it in excess very much the worse for it?—Yes, they suffer, more especially when they cannot get a supply of the drug.

17368. What do you say with regard to those who take opium in moderation?—So far as my experience goes, it has no injurious effect on them either physically or morally; in fact, they themselves and others who do not consume opium say that whenever they take opium it brightens the intellect and renders the body more able to sustain or continue violent effort.

17369. What do you think would be the view of the people of the Punjab, as far as you have seen, with reference to a policy of further restriction or prohibition of opium?—The people of the Punjab, so far as I have seen them, have no desire to put a stop to the consumption of opium. The Sikhs and the religious mendicant class and others who habitually consume opium would greatly resent the prohibition of the drug, and other classes are apathetic on the subject, except the producers, who would very strongly object to prohibition. In this district of Shahpur about 3,500 acres of poppy are grown every year, the average produce being about 500 maunds, value over two lakhs of rupees, or about one-third the annual land revenue of the district. As the poppy is usually grown in small plots, averaging less than an acre each, the number of peasants

17352. You carried through the entire settlement yourself?—Yes.

17353. And were occupied seven or eight years as Settlement Officer of the Ferozepore district?—Yes, during which time I was constantly in the villages, mixing with the people and talking freely with them on all subjects.

17354. You said that the habit of eating opium was prevalent among the Jat Sikhs; those men are hard-working, energetic and thrifty; is that their description?—Exactly.

17355. So that the prevalence of the opium habit among that community is quite compatible with those qualities?—Yes.

17356. Is opium taken to enable men to undergo great fatigue: have you come across that use of it?—They say so in one part of the district where opium-eating is very prevalent. They tell us that if they had not the opium they could not cut the harvest.

17357. Is that a cold weather harvest?—The harvest of the cold weather crop which comes in during the hot weather, in April and May.

17358. That is to say, the harvesting is done during the hot weather?—Yes; they said they could not do the work without opium.

17359. That is what was stated to you?—Yes; I do not say I agree with that.

17360. You have referred to the use of tobacco by Mahomedans and the use of opium by Sikhs: have you in your own mind made any comparison between the advantages or disadvantages of the habit of tobacco-smoking and of the use of opium?—I think the prohibition among the Sikhs in the matter of the *hookah* has been of the greatest possible advantage to them, notwithstanding that they may be supposed, perhaps, to have taken opium instead of it. If they had the *hookah* instead of opium, they would not have been so good men as they are.

17361. Will you explain your reasons for that?—Because the *hookah* is smoked sitting down and it leads to waste of time and gossiping.

17362. Whilst those would not necessarily be the accompaniments to taking a pill of opium?—No, certainly not.

who derive a profit from the production of opium can hardly be less (including their families) than 20,000. These cultivators would certainly suffer considerable loss if the cultivation of poppy were forbidden, and it might become necessary to grant some of them a reduction of the land revenue. The Hindu merchants, too, who deal largely in opium, would strongly object to the compulsory cessation of the trade. I may say I have only just completed the re-assessment of the district as Revenue officer, and I have assessed those villages in which opium is produced at a higher rate than those in which it is not produced, because the cultivation is so profitable; and if this cultivation were suddenly stopped, or much restricted, it would be only fair to reduce their assessment according to the standard of other villages in which opium is not grown.

17370. In the Punjab opium is grown under totally different conditions to that in Behar and Benares?—Yes.

17371. Does the opium grown in the Punjab admit of greater profit to the cultivator?—It is acknowledged by the cultivators themselves to be the most profitable cultivation they can have. In my district they are allowed to cultivate wherever they please, and they pay 2 rupees an acre as an additional acreage cess on opium cultivation.

17372. The revenue which is raised in the Punjab is raised partly in the form of an acreage duty and partly in the form of duties on the sale?—That is so.

17373. With regard to the disposition of the people to bear the weight of additional taxation to compensate for the loss of Government revenue following a policy of prohibition, what do you say as to that?—I am sure they would strongly object to pay any taxation for the purpose of making up the revenue.

17374. (Mr. Pease.) Have you observed that those who are in the habit of cultivating the poppy are more inclined to take it than others?—Not in the Shahpur District. They are hardly ever known to take it at all. They are Mahomedans, and in my district the Mahomedans, almost to a man, refrain from taking opium. Whatever consumption there is among a class of religious mendicants, and to a certain extent among the Hindu and Sikh shop-

keepers; but the Mahomedan peasantry as a class almost universally refrain from it, and they are the people who cultivate it in the Shahpur District. In my own district, there are 3,500 cultivators, and taking five persons to the family, there are about 20,000 persons whose livelihood partly depends on the cultivation of opium.

17375. (*Mr. Wilson.*) You have spoken of the consumption of opium amongst religious mendicants being great, are they an exceedingly useful portion of society in your opinion?—No, I do not approve of them. They are a class who do no good to themselves or to other people.

17376. You must not take it as a recommendation of opium because it is used by that class?—No, the only thing is that they are revered by a large number of the people, and their strong objection to having their opium cut off might give rise to discontent among those whom they can influence which it might be difficult to deal with.

17377. You have spoken of a few persons becoming wrecked "whose whole aim in life is to obtain a supply of the drug by any possible means": what do you mean by that?—Chiefly by begging, sometimes by petty theft, if they cannot get it; but such persons are few. I have only come across about 10 in all my 18 years' experience in the Punjab, and when you ask the people about it they say that it is the effect of opium, and I believe their account is true.

17378. Do I understand that in the district to which you are referring anybody can grow poppy on paying the acreage license, is that so?—That is so; two rupees an acre in the Shahpur District; it is charged at the rate of 8 annas per quarter of an acre.

17379. So that there is no restriction to the number of persons: I mean the license is granted as a matter of course to anybody who likes to cultivate?—Yes, as a matter of fact they are allowed to cultivate it before they obtain a license. When the crop appears above ground the village accountant goes round, writes down the number of plots and the area, and gives a license to the cultivator after it has been actually sown.

17380. Do I understand that it is distinctly a popular crop?—Very popular in the villages in which the soil and moisture and means of irrigation are suitable for it.

17381. I want to understand your method of land settlement and so forth: is the rate of the land revenue assessed on the quality of land or on the crop which is grown?—Assessed on the quality of the land with reference to the crops grown. One would not assess land as capable of producing very good crops unless it actually did.

17382. You told us you had lately been settling some land revenue?—The whole district has been reassessed during the last five years.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

At the Town Hall, Lahore.

FIFTIETH DAY.

Friday, 19th January 1894.

PRESENT:

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (ON THE CHAIR).

SIR WILLIAM ROBERTS, M.D.,
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VERHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

RAI BAHADUR PANDIT SURAJ KAUL, C.I.E., called in and examined (through an interpreter).

17393. (*Chairman.*) I believe you are Revenue Minister of the Kashmir State?—Yes.

17394. And you are a native of Lahore?—Yes.

17395. You have been in Government service since 1853?—Yes, since January 1853.

17383. And you have had regard to the fact that opium was cultivated?—Yes, it is a very important part of the cultivation of some villages.

17384. Suppose, owing to any circumstances—it does not matter what—apart from prohibition or legislation or anything of the kind, it turned out that other crops were taking the place of poppy, and the villages which are now growing did not care for the cultivation and discarded it, by what process would the authorities be able to bring it in so as to get the reduction?—They might petition the Collector that their agricultural profits were much less than they were at the time the assessment was fixed, and if they could show it was so, and if there were sufficient reasons (it would only be in a very extreme case), the Collector would probably report the matter and suggest that the assessment should be reduced, but he would have to give good reasons for his proposal.

17385. In some divisions we have been told that the land is divided into three qualities and the assessment is entirely independent of the crop which is grown on the land; in other words, the rate at which the land revenue was assessed depended on the land, and not on the crop, is that the same here?—It does not vary every year with the crop grown, but when an assessment is made the crops are taken into account,—crops that have been growing there for the last three or four years.

17386. That is to say, you take the crop that has been grown for some years upon the land as so much evidence as to what the quality of the land is?—That is so.

17387. And then the rate is assessed on the land?—Yes.

17388. Taking the other rate as only a guide?—That is so.

17389. (*Mr. Mowbray.*) Would you agree with the last witness in considering that the prohibition of the use of opium in the Punjab might be regarded by the Sikhs as a differential treatment against them as compared with the Mahomedans?—I think they might so regard it, but I have not heard any of them say so.

17390. (*Mr. Fanshawe.*) I understood you to say that in fixing the present rates of assessment, you did directly take into consideration the fact that poppy was being grown?—In certain villages, because it is only in certain villages that poppy can be grown.

17391. You did take that fact into consideration; that is to say, if poppy had not been grown at the time, you would not have assessed those lands so high as you did?—I should not have done so.

17392. Is it the case that in the Shahpur District the women and children assist in poppy cultivation?—No, they do not at all in the case of poppy.

Mr. J. Wilson.

18 Jan. 1894.

Rai Bahadur Pandit Suraj Kaul, C.I.E.

19 Jan. 1894.

Rai Bahadur Pandit Suraj Kaul, C.I.E. 17398. For five years you have been Revenue Member of the State Council?—Yes.

17399. And you have been directed to give in a statement on behalf of the Kashmir State?—Yes.

19 Jan. 1894. 17400. Has that statement been before the Council and approved by it?—Yes.

17401. It is stated in this document that the income of the State from opium consists of two items, one is the sale of licenses, and the other is the taking from the cultivators half the sum which the contractors pay to them. They buy opium from the cultivator at Rs. 10 per seer, and the State takes half that amount, viz., Rs. 5. Is it meant that the State actually takes half or that it is land revenue?—The State takes Rs. 5.

17402. The cultivation of poppy is free, I suppose?—It is free.

17403. But the sale is not free; the cultivator must sell to a contractor?—They cannot sell to anybody except to a licensed contractor.

17404. Is the price at which the contractors buy from the cultivators fixed by the Government?—It is not fixed, but opium is not generally sold at less than Rs. 10 per seer.

17405. Is the small amount of opium which goes to the Punjab sent by the contractors?—The merchants of that part of the country buy it from the licensed vendors of the State.

17406. Do you know whether the system by which the cultivators must sell to contractors has come down from Sikh times, or has been framed in British times?—Since the Council was established.

17407. Before that was it free?—Previously shop-keepers used to buy it from the cultivators and pay *chungi* or octroi.

17408. *Chungi* used to be taken on other things?—Yes.

17409. The statement says that poppy is the most paying crop in parts of the country where it is cultivated—is that a hilly country?—Kandy is a hilly country.

17410. Is it a rice land country?—No, rice is not cultivated there.

17411. When was the Council established?—In 1889.

17412. Now that the Land Revenue settlement is being carried out in Kashmir, I suppose this special rate for poppy will be abolished?—I am not aware that it will be abolished, but with regard to opium one-half of the net profits are likely to be taken as before.

17413. (*Mr. Haridas Veharidas.*) What do you mean by saying that the opium cultivators are free to grow opium, and that there is a charge of Rs. 2½ per kanal?—They are obliged to sell the opium to the contractors only; it is known what the yield is, and from time to time when the cultivators receive the money from the contractor the State gets the money from them.

17414. How is the measurement ascertained?—No measurement is made, but measures will now be introduced.

17415. If they do not know the area of the land on which the poppy is cultivated, how do they charge the rate per kanal?—The contractor enters in his papers the quantity purchased by him, and having the rate of yield they find out the measurement. An average yield of a kanal is taken as the basis.

17416. (*Mr. Wilson.*) Is it not the case that the contractor takes it upon the weight of the opium, and not upon the area of the land?—It has been found by experiment that so much opium is got from so much land.

17417. What do you consider the average?—4 seers per acre.

17418. And how much is the tax per acre?—Rs. 20.

17419. Then that is the same thing as Rs. 5 per seer?—It comes to the same thing.

17420. (*Maharaja of Darbhanga.*) By the tax of Rs. 20, do you mean the rent or the tax?—Rent.

17421. What is the price paid by the contractor per seer to the cultivator, and at what price is it sold in the market?—Four tolas per rupee, double the price at which the contractor purchases it.

17422. (*Chairman.*) Will you now give us the benefit of your opinion on the opium question?—I have had a chance of coming in contact with various classes of people, but I have never noticed any evil effects on the physical or moral condition of a moderate consumer of opium. No case has ever come up before me in which a person should have ever committed an offence under the influence of opium; neither have I ever heard of a person indulging in large quantities committing an offence under the intoxicating effects of opium. I have always been told by moderate consumers of opium amongst the Sikhs, Dogras and Punjabi Hindus and Mahomedans that the use of this drug once a day keeps off the effects of bodily fatigue for 24 hours or till their appointed time for taking their dose the next day. Although I have never tried opium myself, yet I can say from my experience that a moderate use of the drug is not physically or morally injurious.

Chandu and *madak* no doubt cause grave injury, and the consumers of these drugs whom I have seen are so emaciated, that they look more like the dead than the living. They are, in fact, practically unfit to perform any active work in the world.

While at Quetta I made an experiment on the opium-eating prisoners of the jail of which I was the Superintendent in addition to my executive duties in the district, as to whether the habit of opium-eating could be given up: the following were the results:—

About 20 per cent. of the prisoners, chiefly young and robust, gave up the habit after a few days' suffering, but 80 per cent. of them got a bad diarrhoea, which could not be cured by any treatment till they were again permitted to take opium. But with the exception of certain classes, the use of opium generally prevails amongst the uneducated, the peasants, traders and sepoys in the army and police. Young men generally take to opium by following the example of older members of their families, or to cure some disease, and in some cases merely for the sake of pleasure under the effect of the company of opium-eaters. After the age of forty opium is generally used for preserving bodily strength. The use of milk, which is invariably taken as an accompaniment of opium, is said to remove the astringent effects of opium, and thus prevent its bad results which it might otherwise produce on the system. Educated young men do not eat opium, although they appear to be taking to liquor, excessive indulgence in which is as injurious as indulgence in opium, if not more.

17423. You say that the effects of *chandu* and *madak*-smoking are extremely deleterious; where have you had the opportunity of seeing it?—At Quetta.

17424. Was there a smoking saloon there?—There was a shop there.

17425. What sort of place was it?—I went to make a search in a gambling case, and I saw that all the smokers were laying down in a very emaciated condition, dried up, and public women were there.

17426. What class of people used to frequent that place?—Prostitutes and some Mahomedans.

17427. What sort of Mahomedans?—The poorer classes.

17428. People of that country or from India?—Some from India and a few from the Punjab.

17429. From the North-West Provinces or Bengal?—They were mostly from Delhi and Lucknow.

17430. Have you ever seen anything of it in the Punjab?—No, I have had no opportunity of seeing it in the Punjab.

17431. These Mahomedans and prostitutes would probably under any circumstances be debauched people, would they not?—They would be debauched under any circumstances.

17432. (*Mr. Wilson.*) How many members are there in the Council of Kashmir?—Three on behalf of the Government, and two are members of the Royal Family.

17433. By whom are the three appointed?—By the Government.

17434. The Government of India?—Yes, at the request of His Highness the Maharaja.

17435. Who has the power now to substitute one man for another?—The Government at the request of His Highness the Maharaja.

The witness withdrew.

Dewan Amaranath.

DEWAN AMARANATH called in and examined.

17436. (*Chairman.*) I believe you are Governor of Jammu?—Yes.

17437. I believe that is one of the Sub-divisions of the

Kingdom of Kashmir, and Jammu is the capital of the Kashmir State?—Yes.

17438. How old are you?—Twenty-five.

17439. Since when have you been Governor?—One year.
17440. You are a Kashmiri now?—I am a British subject, a Kathri of Emanabad.

17441. Your family are hereditary servants of the Kashmir State?—Yes.

17442. It has been proposed that the cultivation and sale of opium should be prohibited; will you give us your opinion on that?—I am of opinion that the prohibition of manufacture and sale of opium will not only result in a financial loss to the State, but will also cause a great discontent among the people. The moderate use of opium, as far as my experience goes, is not harmful either morally or physically. On the contrary, it is considered a very valuable domestic medicine, and the prohibition, if carried out, will be a great hardship to the people. The long use of opium as an indulgence in large quantities may not be without its bad effects upon the consumer, but it is not surely as great an evil as alcohol or other intoxicants.

17443. How far is the habit of taking opium common among the Punjabis that you know?—The use of opium as an indulgence is common among the uneducated native community, but the educated and more advanced class of Punjabis are not as a rule given to this habit. I do not think that any change short of total prohibition for regulating and restricting the opium traffic and for raising a revenue therefrom can be made at present with advantage.

17444. If prohibition were attempted, what measures would be necessary?—In order to carry out the prohibitive measures, it would be necessary to keep a large establishment, the cost of which is also a matter to be seriously considered; and, as far as I am able to ascertain, the people would not be willing to bear any expense that may be required for the purpose.

17445. Are there any other remarks you wish to add?—In concluding, I may add that in stopping the cultivation of poppy, the State will be justly entitled to a compensation for the loss that it will have to incur on that account, and also the cultivators, who will have to suffer a much serious loss in being obliged to grow inferior crops in place of poppy.

17446. (*Mr. Pease.*) Do you observe that with an increase of education there is a decrease in the consumption of opium?—I think so.

17447. You think that the educated classes do not like the habit?—They do not.

17448. Do you find that the vicious classes are large consumers?—That is my impression.

17449. At what age do they commence to take it?—After 35 or 40; I think in old age it is more common.

17450. Have you known cases of persons who have taken it to excess?—I have.

17451. Are they numerous?—Yes, there are many.

17452. Have you known persons who have come to poverty through the habit?—Not as far as I know.

17453. Do you think that there should be a reduction in the facilities for purchasing opium?—I do not think so.

17454. You think that things are just right as they are?—Yes.

17455. (*Mr. Wilson.*) Into how many provinces is Kashmir divided?—Two—Kashmir and Jammu.

17456. Do you know the population of Jammu?—Six lakhs.

The witness withdrew.

Dr. JAGANNATH called in and examined.

17476. (*Chairman.*) I believe you are Chief Medical officer of His Highness the Maharaja of Kashmir?—Yes.

17477. Where did you receive your medical education?—Here in Lahore Medical College.

17478. How long have you been in the service of Kashmir?—This is the tenth year.

17479. How long ago did you pass your degree?—In 1879; this is the fifteenth year.

17480. Were you five years in Government service?—Yes.

17481. As Assistant Surgeon?—Yes.

17482. Where do you generally reside?—In Jammu.

17457. To whom are you responsible for the proper discharge of your duties as Governor of Jammu?—To the State Council.

17458. (*Mr. Mowbray.*) The population of Jammu is partly Mahomedan and partly Hindu?—Yes.

17459. Which are the larger number?—In Jammu Province the Hindus are more numerous: in the whole of Kashmir the Mahomedans.

17460. Do you draw any distinction between Mahomedans and Hindus as far as the consumption of opium is concerned. Is it more consumed by one or by the other?—It is very difficult to say.

17461. It is not a large consumption in either case I understand?—I think not.

17462. (*Mr. Haridas Voharidas.*) As an educated gentleman, would you be glad to see the use of opium decrease?—It is not a good habit, but at the same time I do not think that it is doing any harm.

17463. My question is, whether you would like as an educated gentleman to see the use of opium decrease?—Certainly.

17464. Do you think that the use of opium is on the increase or on the decrease?—I think it is decreasing.

17465. (*Mr. Fanshawe.*) You say that you have known some persons who have taken opium in excess; will you kindly tell me what you mean by excess?—I refer to persons who take opium three or four times a day; I have seen such persons; they take big doses.

17466. When you speak of excessive use, do you mean a use which causes physical and moral harm, or do you mean merely that large doses are taken?—When taken in very big doses, and for a long time, opium is likely to do some harm.

17467. And of such cases you say you have seen some large number?—Not a large number, but I have seen some.

17468. Do you mean 8 or 10, or 20?—I have seen two or three persons.

17469. You have said that the taking of opium is not regarded as a good habit; I wish to ask you as to the moderate use of opium in small quantities—how is that regarded?—That is not regarded as a bad habit, taking it in very small quantities as a medicine. Those who take it take it as a medicine; they think it will do them good.

17470. When taken in moderate doses, opium-eating is not regarded as a bad habit?—No.

17471. (*Chairman.*) You mentioned that amongst the educated classes the habit of taking opium was markedly decreasing?—Yes.

17472. The educated classes in the Punjab, I suppose, are few in number compared to the total population?—Certainly.

17473. It is confined chiefly to the upper classes and the people in towns, is it not?—Yes.

17474. Among the class of educated persons, do you think that the habit of taking wine or spirits or alcohol is increasing or is not increasing?—I think it is increasing; the use of alcohol is more common than it was about 20 or 30 years ago.

17475. (*Mr. Wilson.*) In the case of young men of 20 or 25 years of age, is it a good thing or a bad thing for them to take a few grains of opium every day when they are in good health and have nothing the matter with them?—No, of course not.

17483. (*Sir William Roberts.*) What opportunities have you had of studying the effects of opium?—I have not made it a particular subject of study, nor have I experienced its effects upon my own person, but as medical officer of different places, I have been seeing men take it and asking them how they are, watching the effects on different subjects; and as Superintendent of the Jail I have had many opportunities of finding out the effects of opium in small or large doses.

17484. In the Punjab or in Kashmir?—In the Punjab as well as in Jammu, not in Kashmir.

17485. In Jammu only?—That is one of the two provinces of Kashmir.

17486. What has been the general result of the information you have collected on the subject both with regard

Dewan
Amaranath.
19 Jan. 1894.

Dr. Jagannath.

Dr. Jagan-
nath.
19 Jan. 1894.

to the moderate and the excessive use of opium?—For a healthy constitution I think it is not necessary at all, but if a few grains of it are taken, I hear that it has good effects. I do not know myself, but those who take very small doses always praise it, and say it is very good. Large doses I think are very bad. That is the report I have received from those who are actual opium-eaters.

17487. What would you call a moderate use?—It depends upon the constitution. In some cases a very small dose has that effect, and in other cases large doses have very little effect. By a small dose I mean one or two or three grains, not more.

17488. Once or twice a day?—I think one grain, twice, I should call a small dose.

17489. What would you call an excessive quantity?—Some people take *mashas* or ten or twenty or thirty grains. Any large amount, anything more than I have said, is excessive.

17490. Have you generally noticed that those who take these large quantities suffer in health?—No doubt. They do.

17491. In what way have you known them suffer?—I think they become quite different men altogether; their health is broken; they are not fit for business; they become quite idle; they are withered; they become prematurely old, and there is no activity in them.

17492. What do you think is the proportion amongst opium-eaters of those who take opium to an injurious extent?—It is not very great.

17493. One in ten or one in five do you think?—I cannot say exactly; but I generally see these low class people going to excess, such as *Fakirs*, *Sadus*, and others who have no particular employment.

17494. Have you not noticed the injurious effects of opium-eating amongst the more respectable classes?—I have not seen any respectable man going to excess.

17495. Do young persons sometimes take to the opium habit?—Yes; they commence it as a medicine, and afterwards they continue.

17496. Have you any experience or knowledge of the use of opium for aphrodisiac purposes?—I have not prescribed it for that purpose, but I hear that people do take it for that purpose.

17497. Have you reason to believe that there is any special effect in that direction?—I do not think that there is any effect of that nature.

17498. I believe that the use of aphrodisiacs throughout India and the East is common—that aphrodisiacs of various kinds are used?—Yes.

17499. And opium is only one of them?—Yes. Those who take it say that it is one of them, but I do not see any special properties of that nature in this drug.

17500. Have you seen opium given to infants?—Yes, I have.

17501. Have you seen any bad effects from it?—Sometimes.

17502. Of what sort?—Some children die from the effects of it, while in other cases it does them good.

17503. Why is it given?—It is given generally in small doses to children as a medicine for cough, pain, bowel complaints, and so on.

17504. You are not conversant with the practice which we are told of—mothers giving opium habitually to infants?—Sometimes they do it simply to produce sleep, but generally they give it as medicine at first, not for any other purpose.

17505. When you speak of its producing mischief, is that by accidental poisoning?—Yes, by accidental poisoning.

The witness withdrew.

17506. Have you seen any evil effects of habitually giving opium to infants?—Yes. I have seen children taking opium as a habit, but simply to relieve a certain disease; they give it up when they get all right.

17507. Have you seen any malarial diseases among infants?—I have seen such cases.

17508. It would be in such cases that opium would be given to children?—I have never seen that opium has anything to do with malarial fevers or anything of the sort; I never tried it.

17509. On the whole, as far as your experience goes, does the use of opium in the Punjab produce more harm or more good?—As a medicine I think it is very good in small doses; it does good in many diseases; but going to excess is certainly injurious.

17510. I suppose it is a very common household medicine throughout the Punjab?—Not very common; still it is used as a domestic medicine in some houses.

17511. What for?—As a medicine for their own use or for the use of their children, to relieve different complaints. If the bowels are bad, if the child does not go to sleep, if it has a cough, or if it has any pain, they give opium; they give it for different purposes.

17512. (Mr. Wilson.) As a medical man holding an important position, would you be glad to see the use of opium amongst the population for non-medical purposes increase or decrease?—I think it is not necessary to increase it for non-medical purposes.

17513. Would you rather like to see it decrease? Do you not think it is a bad habit when not employed for medical purposes?—I think it is a bad habit.

17514. (Sir William Roberts.) Even in a small dose?—Taken as a habit it is a bad thing.

17515. (Mr. Mowbray.) The last witness told us that in Kashmir he thought the consumption of opium was decreasing, and that the consumption of alcohol was increasing; is that your opinion?—Yes, as far as I am competent to say I think the use of alcohol is increasing.

17516. Do you think that the one has anything to do with the other—that the tendency to decrease the use of opium is to increase the use of alcohol?—It is possible that those who take opium in excess, if they did not get it might resort to other liquors and intoxicants, because they cannot live without an intoxicant as their habit.

17517. Do you think that is probable?—Yes, it is probable.

17518. You have told us that in your judgment the taking of opium is a bad habit?—Yes.

17519. Do you consider that the taking of alcohol as a habit is worse?—Yes.

17520. (Mr. Haridas Voharidas.) Perhaps you know that opium is not expressly prohibited by the Hindu or Mahomedan religion as alcohol is?—As far as I have heard, alcohol is more objected to on religious ground than opium.

17521. You do not know that alcohol is expressly prohibited?—Alcohol is expressly prohibited.

17522. And opium not?—Not so strictly as alcohol.

17523. Then of course you would not like to see opium-eaters cease the habit of opium-eating and take up alcohol in its stead?—I would not like anybody to take large doses of opium or large doses of alcohol.

17524. You would not like to see Hindus or Mahomedans taking alcohol in preference to opium?—No, I would not.

COLONEL H. G. WATERFIELD called in and examined.

Colonel
H. G.
Waterfield.

17525. (Chairman.) I believe you commanded the 45th Rattray's Sikhs?—Yes.

17526. For how many years?—Nearly seven.

17527. Where are you now?—I am Colonel on the Staff Commanding at Ferozepore.

17528. What is your experience about the use of opium amongst the Sikhs?—The men of course use opium very generally.

17529. How many per cent. should you say use it habitually?—I should say from 12 to 15 per cent. use it habitually.

17530. Do many of those use it to excess?—Very few indeed. I should put down the percentage at a half per cent., not more, as far as my experience goes.

17531. A half per cent. of the consumers?—A half per cent. of the whole body of the regiment.

17532. Do you notice any physical or moral bad effects on the average consumer?—No, except of course in the case of the man who uses it to excess, exactly the same as the British soldier who is a drunkard.

17533. Do you think it has a beneficial effect?—Yes, if the men are exposed to hard work in cold or damp weather.

In the Black Mountain, where we were out without tents for five weeks, the men would have felt it much more had they not occasionally taken opium.

17534. Under those circumstances, did more men take to it than generally use it?—I can hardly say that, but I should say that those who occasionally took it took it oftener when on service under such circumstances.

17535. If the use of opium were prohibited by order of the Government, what do you think would be the effect?—Great discontent I think.

17536. Do you think they would take to anything else in its place?—I certainly think they would take to liquor,—bad bazar liquor, arak,—and consequently discipline would suffer. A drunken man creates rows and gets into trouble; the man who takes opium even to excess only gets stupid over it; it does not lead to breaches of discipline.

17537. If the use were prohibited, do you think the soldiers would get it by smuggling?—Certainly.

17538. If to prevent the use the police came into the lines to make seizures, I suppose that would have a bad effect?—It would certainly lead to rows and disturbances.

17539. Have you ever had to invalid or dismiss a man for the excessive use of opium?—I can recollect two or three cases of men, over 15 years' service being put down in the doctor's certificate as possibly suffering in constitution from excess of opium, but very few.

17540. Have you had cases of the same sort from excessive use of alcohol?—Yes, one or two—not much in the Sikhs. I certainly think they would drink if they did not get their opium—those who are accustomed to it and habitually take it.

17541. (*Sir William Roberts.*) With regard to the occasional use you have mentioned, I presume you mean that a man takes a dose when he is fatigued after a hard day's work?—Quite so.

17542. Or before?—Some would take it before. If they get into what they consider a feverish place, they will take it in the early morning. If a man thinks that he is going a long march, or that he will have a hard day's work, he will probably start with a small pill of opium.

17543. It appears from your statement that nearly all the Sikh soldiers take opium in that form?—I should say that about 80 per cent. are occasional takers.

17544. Without contracting the habit of taking it daily?—Yes.

17545. Is there also a class of them who take it in the winter, and not in the summer?—That I think should apply to the occasional opium-eater; he would more often take it in cold damp weather than in hot weather.

17546. You do not probably know what would be the dose that an occasional user would take when fatigued or with a hard day's work before him?—I should say about four or five grains in a day, not more.

17547. Is your estimate of 10 or 15 per cent. the result of any careful enquiry, or just your own estimate?—I have consulted the medical officer of my late regiment.

17548. It is very much in excess of what has been stated with regard to some other regiments. In the 10th Bengal Lancers, for instance, it was said that 7 or 8 took it among the Sikh troops, and in the 2nd Punjab Infantry there were 9 who took it habitually, three-eighths of the regiment being Sikhs?—I am giving you the highest estimate.

17549. You think that this is the highest estimate of those who take it all the year round?—Yes.

17550. I understand that there are also a large number who take it occasionally under special circumstances?—Yes.

The witness withdrew.

COLONEL W. W. BISCOE called in and examined.

17566. (*Chairman.*) You are now commanding in Mooltan?—Yes.

17567. In what regiment did you pass most of your service?—In the 19th Bengal Lancers, 30 years.

17568. What was the composition of that regiment?—There were practically four troops of Sikhs, three and a-half certainly; there were some Dogras amongst them.

17569. And the rest of the regiment?—The rest were Punjabi Musalmans and Pathans.

17551. (*Mr. Wilson.*) When you say a large number of Sikh soldiers eat opium occasionally, are you referring particularly to the 45th, or are you speaking in general terms?—Of course I chiefly know about the 45th, but the other Sikh soldiers are exactly of the same caste and come from the same districts. I believe the consumption of opium is general among the Sikh population.

17552. We had some evidence that there was a considerable difference in practice among the different classes or castes of Sikhs from different parts of the country, but I take it that that is your general view?—That is my general view; I think that more of the Malwai Cis-Sutlej men are habitual opium-eaters than the Manjha or Trans-Sutlej men.

17553. With reference to your statement that you think the use of opium is beneficial to men who are exposed to hard work in the cold or damp, can you tell us anything of exact observation as to the difference between those who do use it and those who do not?—No, I do not feel in a position to do so; I never thought of making any particular comparison between them.

17554. You would not say that any were unable to stand work for want of it?—No, not any that came under my own observation.

17555. In the case of the Black Mountain Expedition, were arrangements made regimentally for a supply, or did they provide themselves?—They provided themselves.

17556. (*Mr. Moubray.*) You have been in command for 7 years; were you connected with the regiment before you were in command?—No.

17557. The 7 years represent your experience of the regiment?—Of the 45th.

17558. Where is it recruited from principally?—Ferozepur, Ludhiana and Amritsar and Lahore Districts.

17559. You have been asked whether you have made any exact observation of the effect on one man and another; let me ask you whether in the course of your 7 years' command of the regiment, the opium habit has ever forced itself upon your mind in such a way as to cause you to make exact observations?—No.

17560. May I take it that if it had been a cause of harm to the men in the regiment, it would probably have been brought to your notice?—Certainly.

17561. You have also told us that to prohibit the use of opium would cause discontent among your men. It has been suggested to us that it might be possible to meet the case of men who were already habitual consumers by allowing them to register their names as habitual consumers, and that they should be exempted from the prohibition; do you think that would cause discontent amongst your men, if they were not allowed to have opium unless they entered their names on a register as opium consumers?—Yes, I think so; I think it would make a sort of invidious distinction.

17562. (*Mr. Fanshawe.*) Have you noticed whether the habitual use of opium is more common among the older or among the younger men?—Among the older.

17563. Am I right in understanding that neither the habitual nor the occasional use of opium has been found in any way an interference with the discipline of your regiment?—In no way.

17564. (*Chairman.*) In saying that you believe the moderate use of opium to be beneficial when men are exposed to hard work in cold or damp weather, I presume you were guided by what you understood to be the feeling in the regiment?—By that and by my own experience, also by consulting the medical officer of the regiment.

17565. The medical officer thought it had a good effect?—He thought so, in small quantities, occasionally. When men are exposed to inclement weather it certainly has a beneficial effect on them.

Colonel
H. G.
Waterfield.

Colonel
W. W.
Biscoe.

Colonel
W. W.
Biscoe.

19 Jan. 1894.

to quite a small percentage. It is also fallacious to take a percentage of Sikhs, because it is very rare for a young Sikh to take opium at all. The habit is chiefly amongst middle-aged and old men.

17572. They think that middle-aged and old men require some stimulant?—Yes, it is very general amongst men from 35 years old and upwards, according to my experience.

17573. Can you recollect any cases of men taking opium in excess so as to destroy their health?—Yes, I recollect certainly four or five in the course of my service, but I cannot say that they destroyed their health; they became useless as soldiers.

17574. In what way?—They became stupid and careless in their work.

17575. You say that in the campaign the percentage went up to 70 or 80 per cent. amongst the Sikhs?—Yes, amongst the Sikhs.

17576. Do the Punjabi Mahomedans and Pathans take it to any extent?—A very small percentage. It is more common for the Pathans to take *charas*.

17577. Is there any difference in intelligence and capability of work between moderate users and total abstainers?—None whatever in my experience.

17578. Did any case of regimental crime ever come up before you which seemed to be caused by opium?—Certainly not. It would rather tend to decrease crime as far as the opium-eater was concerned; he is a more sluggish and quieter man.

17579. Did the use of liquor ever cause regimental offences?—Very rarely; occasionally.

17580. You say that the Pathans used to take *charas* or *bhang* sometimes?—Yes.

17581. What were the results of that?—I have known several cases of health breaking down altogether through that.

17582. Did it lead to frays or anything of the sort?—Yes, to disturbance in the bazar, quarrels, and so on.

17583. The Pathan is naturally given to quarrels?—He is naturally given to that sort of thing.

17584. What do you think would be the effect upon the minds of the soldiers of prohibiting the use of opium?—I think it would have the same effect, but probably less violently expressed, as if a British soldier were stopped his tobacco.

17585. Do you think it would be possible to stop it?—No, I certainly think it would be done illicitly if it were not allowed.

17586. (*Mr. Pease.*) You said that many men began to take opium as they got more advanced in life. Do you not think that it also largely arose from their picking up the habit in companionship from their comrades in the barracks?—The cavalry soldiers do not live in barracks; they live two in a hut; the barrack system does not so much apply to them, and my experience is entirely in the cavalry.

17587. But from association in the regiment with other men, may not the habit largely arise?—I should doubt it, but I cannot speak certainly. I doubt it, because it is taken so much more largely when extra fatigue is incurred.

17588. (*Sir William Roberts.*) Have you noticed, like Colonel Waterfield, that a large number of men take opium only occasionally for emergency of any sort?—A large

majority of those who took opium were occasional users only.

17589. You say that nearly all the men took opium occasionally in that way for emergency?—I should think that of all the opium-eaters, 60 per cent. at least were only occasional users; they took it and left it off as occasion required.

17590. (*Mr. Wilson.*) You say you know well all the men who took opium; may I ask you in what way you came to know them?—I was Adjutant a great many years, and it was my duty to find out as much as I could the characteristics and qualifications of every man in the regiment, and I think I may say, generally, I knew most of them.

17591. As to their general habits and ways?—Yes.

17592. Did you at the time in making those enquiries regard the question whether they took opium as a matter of the least importance regimentally or from a military point of view?—No, I mean that it was not considered a defect in a man if he took opium occasionally.

17593. If it was a matter of no kind of importance, why did you trouble yourself to enquire into the habit?—It came up in many ways; it came up in ordinary conversation; it came up with regard to the supply of opium on special occasions; and in many ways it came to my notice without my actually making it a special study.

17594. Was the supply provided at any time regimentally, or was the opium sold in the regimental bazaar?—It was sold, but sometimes when on campaign, some special arrangement had to be made to get the opium if it could not be bought, for instance in Afghanistan.

17595. (*Mr. Mowbray.*) You have been asked about companionship leading to the consumption of opium in a regiment. I do not know whether you have had enough experience of the people of the district apart from the regiment to say if opium-smoking is more common among the elder men of the regiment than among the elder men in the peasantry outside?—It is more frequent at times when they are exposed to hardship. I do not suppose that it is at ordinary times.

17596. Do you think that the association in a regiment leads to a larger number of men acquiring the habit than if they were not in the regiment?—No, it is not a social vice at all.

17597. (*Mr. Fanshawe.*) You have not found the use of opium in any way an interference with discipline in the regiment?—No.

17598. Ordinarily on field service opium would be bought in the regimental bazar by the men themselves?—Yes.

17599. And on special occasions regimental arrangements might be made to provide men while on campaign with opium, if it were not available in the bazaar?—Yes. For instance, when we marched from Kandahar to Kelat, where there were no supplies at all, we had to look about us and get some for the men.

17600. That was arranged regimentally?—Yes.

17601. (*Mr. Pease.*) Have you had any experience of the supply of opium falling short in its supply and the effect upon the men?—Yes, there have been general complaints, but I have never noticed that they have fallen off in their work on account of it. They generally complain; they evidently miss it.

17602. For how long a period were they without opium?—I can remember one instance in which we were three weeks without it beyond what the men may have carried on their persons.

The witness withdrew.

HONORARY SURGEON RAHIM KHAN, KHAN BAHADUR, called in and examined.

Honorary
Surgeon
Rahim Khan,
Bahadur.

17603. (*Chairman.*) You are Honorary Surgeon, and Khan Bahadur?—Yes.

17604. When did you take your degree?—1858.

17605. I believe you are Lecturer on Materia Medica?—Yes.

17606. And in Medicine in the Lahore Medical College?—Yes.

17607. Since you took your degree, where have you served the Government?—I was two years House Physician to the Calcutta Medical College Hospital, and one year Civil Surgeon at Shapur; the last 35 years I have been attached to the Lahore Medical College.

17608. (*Sir William Roberts.*) Have you been in private practice in Lahore?—Yes.

17609. Have you been in charge of any dispensary?—In the out-door medical department of the College Hospital.

17610. Has that given you a good deal of experience in regard to the habit of using opium in Lahore?—It has.

17611. I presume that all your experience practically has been gained in Lahore?—Yes.

17612. What have you observed as to the causes leading to the habit of opium-eating in health?—There are several causes which lead to the habit of opium-eating in health. For instance, it is a common belief among people here that opium acts as an aphrodisiac; hence many, but especially those in affluent circumstances, take to opium-eating in order to gratify their lust. There is no doubt that opium

in moderate doses does act, in the first instance, as a general stimulant, and hence as an aphrodisiac, but like other stimulants and narcotics, when a habit is established, opium also loses its aphrodisiac properties; and the quantity, which in the commencement acted as a stimulant after a time fails to act as such; consequently, the dose has to be increased, and thus a habit is formed. But the generality of opium-eaters contract the habit in order to obtain relief from some bodily ailment, such as diarrhoea, dysentery, bronchitis, catarrh, dyspepsia, etc., etc. Such persons always keep within bounds, and never go beyond moderation.

17613. Do you regard opium as an aphrodisiac in any other sense than as a general stimulant, or have you reason to believe that it has any special aphrodisiac properties?—No, it has not any special aphrodisiac properties. It acts as a general stimulant.

17614. What other observation have you made in regard to the habitual use of opium?—I have also known labourers and agriculturists taking opium regularly in order to obtain relief from the fatigue brought on by a hard day's work. In their case opium is a godsend, for it lulls them to sleep, and alleviates suffering both mental and bodily. In the morning they get up quite refreshed, and cheerfully resume their work with renewed vigour. I have seldom seen them plunge into dissipation and sensuality. I have never seen an opium-eater, like the devotees to Bacchus, attracting sight-seers, in the open streets, to demoniacal exhibitions, nor have I known them to be a nuisance to society or breakers of the peace.

17615. You have noticed no doubt that opium is sometimes used in injurious excess?—Yes.

17616. In what way has the effect been then shown?—It brings on emaciation; the victim loses flesh; he loses appetite and energy and aptitude for work.

17617. But it does not seem to shorten their lives apparently?—No, excess in everything is bad, and opium forms no exception. Therefore when taken in excess, the victim loses flesh and virile strength. He becomes lazy, and the very idea of work is a terror to him. The only crime I have ever known the opium-eaters (in excess) commit is petty thefts when unable to obtain their accustomed dose.

17618. Do you think that the prohibition of the use of opium as a popular household remedy would be good or bad?—It would be bad.

17619. I understand that opium is used as a household remedy over all this part of the country?—Yes.

17620. What for?—For aches and pains and bowel complaints generally, such as diarrhoea, dysentery, and also as a stimulant after a hard day's labour.

17621. Have you known it in use much amongst elderly people—people above 40?—Yes, it is a belief among the natives here that when a man reaches his 40th year he should take opium in order to prevent diseases which are brought on by old age.

17622. Have you formed any opinion whether that is anything more than a popular delusion?—It is not a delusion; it is a fact.

17623. That is your opinion?—Yes.

The witness withdrew.

The Honourable Baba KHEM SINGH BEDI, C.I.E., called in and examined (through an interpreter).

17645. (Chairman.) I believe you are one of the leading men among the descendants of Baba Nanak?—Yes.

17646. You are a member of the Council of His Excellency the Viceroy and Governor-General?—Yes.

17647. How long have you been a member?—I was a member for 2 years, and then again for 6 months.

17648. I suppose you have a great many disciples among the Sikhs?—You are a witness to the fact that I have many disciples in the Punjab and in the frontier.

17649. And among the Hindus of Afghanistan?—Yes.

17650. I believe that Baba Nanak was the founder of the Sikh religion?—Yes.

17651. And his descendants are still revered by the Sikhs?—Yes.

17652. Will you tell us what you know about the use of opium by the people of the Punjab?—From personal experience, having occasion to frequently travel in various

17624. It is also given to infants in Lahore, is it not?—It is not very common—sometimes, especially by women of bad character.

17625. In your experience what are the quantities used by moderate opium-eaters?—About 4 grains a day.

17626. Two in the morning and two in the evening?—Yes.

17627. I suppose you have known persons use very much larger quantities than that without any apparent harm?—Yes.

17628. What examples of that sort have fallen under your observation?—It is very rare. The persons I have seen generally take alcohol also; their constitutions are very strong, and they can stand drugs like narcotics.

17629. Have you noticed what we should call great tolerance of the opium habit in your experience?—Yes.

17630. I mean people taking 30 or 40 or 50 grains a day without harm?—I have seen not only 30 or 40 grains taken, but 2 or 3 drachms during 24 hours, and the people have been still doing well.

17631. Do you mean taking it for many years?—I have known persons taking it for 20 or 25 years continuing the habit.

17632. In those large quantities?—Yes.

17633. Then I may take it that you have recognised a very great difference of tolerance in individuals in regard to the quantity taken without harm?—Yes.

17634. Some persons would take perhaps only 3 or 4 grains a day, and that would be excess for them, while others would take 2 or 3 drachms without any ill consequences?—Yes.

17635. Is there much malaria in this neighbourhood?—Not in this neighbourhood especially.

17636. Your experience, speaking generally, is that the use of opium as a household medicine and also as an habitual stimulant or comforter is not harmful?—No. It is not harmful.

17637. And that examples of injurious excess are infrequent?—Very infrequent.

17638. (Mr. Wilson.) You have said that the taking of opium does not tend to shorten life?—Yes.

17639. Have you any statistics available that will in any way bear upon that point?—I have no official statistics, but I have seen many persons who have been taking opium for years together and enjoying good health and long life, among the agricultural people here, who daily come to me for treatment in the out-door department of the hospital, and especially amongst the pensioned-off Native Sepoys, who have taken to agriculture on their retirement.

17640. Do you as a scientific man think that it is satisfactory evidence that it does not tend to shorten life?—I think it is, especially when compared to alcohol.

17641. Are you entirely satisfied with the present system of arrangements for the sale of opium?—I am.

17642. Would you be glad to see an increase of the present consumption among the general population?—No.

17643. Would you like to see a decrease?—Neither that.

17644. It is just right as it is?—Yes.

parts of India, I am of opinion that the use of opium is not injurious to the people in the place where I reside or where I hold land. Of course, if taken in excessive quantities, the drug is deleterious; but this is not the use, but the abuse, of it.

17653. This opinion applies to the Punjab, does it not?—Generally to the Punjab.

17654. Would the people be in favour of an interference with the habit by Government?—No, they would not.

17655. If the prohibition of the use of opium involved a loss of revenue, and additional taxation had to be imposed to meet that loss, what effect would it have on the minds of the people?—They would not be willing to bear those taxes; they are not contented even of the present taxation.

17656. Is opium supposed to be prohibited or discouraged by the Sikh religion?—It is lawful. It is not prohibited. Baba Gobind Singh enjoined its use in actual war—one *ratti* of opium.

Honorary
Surgeon
Kahim
Khan, Khan
Bahadur.

Mr. J. E.
Bridges.

15 Dec. 1893.

written, making not only sale, but also possession, punishable?—Yes.

7591. Do you think that has tended in any way to make the rules better enforced and more effectual?—I cannot say I think so. I think it is simply keeping opium away from them that prevents them taking to it. We have very few shops, and they have very little opportunity of getting it.

7592. How many shops have you in the Eastern Division?—There are three shops.

7593. Are those three shops supposed to be supplied exclusively with Government opium?—Yes.

7594. I suppose there is no restriction to selling in licensed shops opium that is imported so long as duty is paid?—No, and confiscated opium is sent to them for sale.

7595. So that in fact the preventive system which you now have to keep up in the Eastern District on the Shan frontier is intended not to prohibit the entry altogether, but to see that the opium which comes over is, as far as possible, made to pay duty?—Yes.

7596. If opium were totally prohibited and the shops were closed, would you then have to keep a much larger preventive force?—Yes, we should have to keep a much larger preventive force. All the Chinamen would leave the country, and our Military Police could not stay here. The Chinese are the chief traders in the Eastern Division. They have nearly all the catch trade in their hands. They have also some timber trade and all the cotton trade.

7597. I may take it as your opinion, as responsible for the division, that you do not wish to see any further restriction in the regulations recently put forth?—No, I do not.

7598. (Chairman.) Is Yunnan or Shan opium readily distinguishable from Government opium?—Yes.

7599. Is it of a different consistency?—I cannot say. Some people can tell you; but I do not know what the difference is myself.

The witness withdrew.

Mr. Law Yan,
K.S.M.

Mr. LAW YAN, K.S.M., called in and examined (through an interpreter).

7600. (Chairman.) I believe you are a merchant and Municipal Commissioner of Mandalay?—Yes.

7601. What have you to say with regard to this question?—I have lived in Mandalay for over 30 years. Not more than one in ten of the Yunnanese in Mandalay smoke opium, and few of the better class of merchants. The Fokinese and Cantonese smoke it to a great extent, but not universally. In the time of King Mindon Min the restrictions on the sale of opium were less stringently enforced than at present. I think it a bad thing to smoke opium. It is against the traditional precepts of my people, and it is also bad for the smoker's health. Most Kachins smoke opium, and as they live in a cold climate they are not so much affected by the practice as people who live in a hot climate.

7602. How long have you been a Municipal Commissioner?—Since 1888.

7603. Are you the only Yunnanese merchant who is a Municipal Commissioner?—Yes, I am the only one.

7604. Were you born in Yunnan?—Yes.

7605. You were quite a young man when you came here?—I am 48, and I have been here 31 years, in the time of King Mindon Min.

7606. Have you ever re-visited Yunnan?—I have never been back. All my people have died, and I have never gone back there.

7607. Have you ever tried smoking opium?—No, I have never tried it. I do not like it. My grandfather told me not to smoke it. We have never smoked it in our family.

7608. Does it commonly run in families to smoke or not to smoke, as the case may be?—I think there is about 50 per cent. who have not smoked from father to son.

7609. Do you think there is any difference in cleverness between the merchants who smoke and those who do not smoke?—I think it is the same thing whether a man smokes or not.

7610. In commercial honesty do you think there is any difference?—They are indolent in mind—the people who smoke opium. I do not think there is any difference in their honesty: some are good and some are bad.

7611. In King Mindon Min's time was there any restriction on the Chinese using opium?—All that the King used to issue orders about was not to sell opium to the Burmans, but the next day the Chinese would be selling to the Burmans. It was enforced one day and in a few days it was forgotten.

7612. Did the Burmans use it as much in those days as they do now, or less?—They smoke less now than they did in the Burmese times.

7613. I suppose the Burmese only smoked in places like Mandalay?—They also smoked in the jungle, in the district outside Mandalay.

7614. Do you know of any opium-smokers who have died from smoking opium?—I have heard of men dying because they could not buy any opium and they had been in the habit of taking it; they died of dysentery or diarrhoea when the opium was stopped.

7615. (Mr. Pease.) Are there these three classes of Chinese,—Yunnanese, Fokinese, and Cantonese,—in Mandalay?—Yes.

7616. What proportion is there of Yunnanese?—Three-tenths Yunnanese and seven-tenths Cantonese.

7617. Would you be in favour of anything being done to prevent those smoking who have not yet begun to do so?—It would be better to prevent opium-smoking amongst those who have not yet begun.

7618. Would you be in favour of a register being made for present smokers, and that all others should be prevented from buying opium?—If people stay here for good it will be advisable to have the names of smokers registered; if they are only temporary persons who go about here and there, it would not be advisable to register them. It is in the discretion of the Government whether it would be advisable to have their names registered or not.

7619. Is that opinion the opinion of the Chinese generally: would the Chinese people agree with you in that?—The confirmed smokers will not like having their names registered unless those who do not smoke and do not eat opium like the registration of the smokers' names: the smokers would not like it.

7620. (Mr. Mowbray.) In the days of King Mindon Min, where did the opium come from that the people smoked?—From the Shan States, from the north, and from Bhamo. Yunnanese opium came from the Northern Shan States and from Bhamo.

7621. (Chairman.) When you lived in Yunnan as a young man, was the poppy much cultivated there?—The poppy was not grown much in the Yunnan country. There are wild tribes in a great part of Yunnan.

The witness withdrew.

Mr. Sidney
Jennings.

Mr. SIDNEY JENNINGS called in and examined.

7622. (Chairman.) I believe you are an Inspector of Police?—Yes.

7623. How long have you served in Burma?—I joined in May 1888.

7624. Where have you served?—I served in the Thongwa district for about a year. In September 1889, I was transferred to Kamaing, the most northern British post in Burma.

17705. What sort of people?—They are considered as disreputable.

17706. What class of people?—People of the lower classes.

17707. People of Amritsar or other places?—Some are natives of the place, and some are from outside, the people who follow gambling, and so on,—bad characters.

17708. (To Lala Ram Rakhmal.) Are you of the same opinion?—Yes.

17709. Do you use opium yourself?—Yes.

17710. How long have you used it?—For the last 14 years.

17711. Did you use it for any particular reason?—I was suffering from galls and from an affection of the throat, and other medicines were of no avail.

17712. How often in the day do you take it?—Once a day only.

17713. How much?—2 rattis a day.

17714. Did you always take the same amount from the beginning, or did you alter it?—I commenced with only half a ratti and then increased it to 2 or 2½ rattis.

17715. Do you think it does good?—Yes, it does great good.

17716. (Maharaja of Darbhanga.) What is the price now paid per seer for opium to the cultivator?—I do not know.

17717. (Mr. Pease.) Do you feel strong and well now that you take 2½ rattis?—Very strong. Formerly I suffered from illness.

17718. (Mr. Wilson.) Do you think it is a good thing for young men who have nothing the matter with them, who

are in perfect health, to take opium?—It is good for young men to take opium habitually.

17719. Let me ask you again, is it good for young men of 20 or 25?—It is not considered an evil.

17720. Does it do good to their bodies?—Young men take it for some particular reason.

17721. Does it do good to their bodies?—Among the consumers there are only 2 or 3 per cent. who take it on account of evil company or association; 90 per cent. take it above 40 years of age.

17722. Again I ask you, would you recommend young men of 20 or 25 in perfect health to take opium, or would you advise them to let it alone?—I would not advise them either way. I would not advise them to use opium.

17723. (Chairman to Rai Bahadur Gagarmal.) Do you think that it would be proper to raise the prices of opium to 30 or 40 Rs. per seer?—No.

17724. Are you aware that in some parts of India that is a price at which it is issued from the Treasury?—I only know about the Punjab.

17725. (Mr. Mowbray to Lala Ram Rakhmal.) With regard to the last answer that you gave to Mr. Wilson, may I ask whether you go about the city of Amritsar generally advising the people what they should eat or drink?—No, I do not.

17726. (To Rai Bahadur Gagarmal.) You say that the use of opium increases the power of digestion, so much so that one can digest very rich food?—It should be used for some necessity, it should not be taken for self-indulgence.

17727. One who has a good power of digestion need not take it?—If he does not suffer from cold or from feebleness, why should he take it?

The witnesses withdrew.

PANDIT MAHADEO called in and examined (through an interpreter).

17728. (Chairman.) I believe you are a Brahmin resident in Amritsar?—Yes.

17729. And a practitioner according to the Hindu School of Medicine?—Yes.

17730. Will you tell us your experience as to the opium habit?—In our country the rich and poor both use opium; and opium-eaters are not looked down upon by persons who do not use it, as it is taken as a kind of medicine, that is, by those suffering with colds, and weak persons of over 35 or 40 years of age, who have not recovered strength after illness. The Hakims prescribe one grain as a dose for their patients, and this relieves them and makes them fit for work. Rich people use opium in consequence of indigestion, the poor from weakness and hard work. Opium is good for digestion, and gives strength to the body. The quantity taken by each person is according to the state of their constitution. An ordinary person uses from 1 to 20 grains of opium. There is no other medicine as good as opium for colds, etc.

17731. Do you mean that persons suffering from cold should take it while they have the cold on, or that people who are liable to colds should take it daily to keep off the cold?—They take it while they are suffering from cold, not habitually.

The witness withdrew.

Dr. ELIZABETH BIELEY called in and examined.

17739. (Sir William Roberts.) You are a Doctor of Medicine?—Yes.

17740. Of Edinburgh?—Of the University of Berne in Switzerland.

17741. Were you trained in England, or in Switzerland?—Partly in England, and partly in Switzerland.

17742. Are you now in medical charge of Lady Aitchison's Hospital, Lahore?—Yes.

17743. How long have you been in that position?—Eight years.

17744. Are you also in private practice in Lahore?—Yes.

17745. Is there an Out-patients' Department?—Yes, a large Out-patients' Department.

17732. What do those who take it habitually take it for, —Those who take it habitually take it for some particular reason.

17733. Do you mean they take it by your advice, or are you speaking of a general habit?—I am speaking of those who trust in my prescriptions.

17734. I am speaking about the general custom of a country; there are a great many people who take opium habitually, are there not?—There are no such persons, except for some reason.

17735. What reason?—Suffering from cold, from weakness, sleeplessness, uneasiness. They find that digestion improves, and that brings sleep.

17736. What would people think of any order prohibiting the use of opium except for medical purposes?—They would not look upon it as a good thing.

17737. Why do you say that people only take it for some reason?—Those who take it have become accustomed to its use; they would regard the order as proposed in the light of a hardship.

17738. (Mr. Mowbray.) Are you satisfied with the present arrangements with regard to opium?—The arrangements are good, and I am satisfied with them.

17746. And you have beds as well?—Yes.

17747. Will you give me your general view of the opium question since you have been in India?—I have been working as a doctor in India over 14 years. Six years were spent at Lucknow, i. e., from January 1876 to April 1882. Since October 1885 I have held my present appointment as Physician in charge of the Lady Aitchison Hospital. As regards the practice of opium-eating amongst the upper class women of Lucknow, I am afraid I cannot give much information, except that I do know the practice was extensively carried on. During the time I have been working in Lahore I have treated patients both in their homes, in the Out-patients' Department of this hospital, and as in-patients in the hospital itself. During this present year we have had a daily average of 25 in-patients and of 100 out-patients. The previous year the daily average of in-patient

Dr.
Elizabeth
Bielby.

19 Jan. 1894.

was 20 and of out-patients 97. I know that the women of all classes eat a small quantity of opium daily; there may be exceptions to this, but it is a general practice.

17748. Have you in any way formed a sufficiently accurate idea to be able to tell us whether half the women eat a little opium; do you think that half of them do eat a little opium?—Certainly, I should say so.

17749. Are you speaking of women of mature age after they are thirty or forty?—Yes; women over twenty years of age.

17750. I am speaking of healthy people?—Yes.

17751. How much do you think they would use daily?—About two grains. I am speaking of the moderate ones, those who do not take it in any great degree. They take it principally as a digestive. I have found that out in my hospital practice. The women who came to us in the hospital complained that the food we gave them caused indigestion. We tried to give them the exact kind of food, both in quantity and quality, that they would take in their own homes. Upon inquiry I found that the women were accustomed to take a small quantity of opium, either just before their food or with their food. Since then I have found out that this is a general practice with the women of the Punjab.

17752. Do they take it in two doses?—Yes; generally a little before the mid-day meal, and a little before the evening meal.

17753. That does not lead to an increase of the dose, I suppose?—No; and they can leave it off and take it on again without any bad effects.

17754. It is scarcely more than an medical dose?—It is a very small medical dose. You could give much more than that.

17755. They use crude opium?—Yes, principally. They have shown me again and again the opium they use. They have taken it out of the corner of their *chudders*. It is the opium we buy ourselves to make up our extracts and pills, and so on. It is the same thing.

17756. Is that the medical opium given out at Benares and Patna?—I do not know whether it is the same.

17757. It is what is obtained from the licensed vendors?—Yes.

17758. In your experience in the homes of the natives of India, have you seen any women suffering from the bad effects of opium-eating?—I have only seen one case of the bad effects. A woman was brought to my dispensary who was certainly suffering from the effects of this custom. She had taken opium for several years; and her friends brought her to me to see if anything could be done for her. They told me she began to take opium because she lost all her children one after another. That is the only adult case that I have seen in my practice in Lahore either in private or hospital practice in which a patient really suffered.

17759. In what way was she suffering?—She was thin and nervous. She had lost her appetite; her skin was dry, and her eyes were staring; her pulse was weak, and she had no malady, there was no reason why she should be suffering in that way. Her friends told me that she had taken to this habit.

17760. Did she recover?—They asked me to take her into the hospital, but there was no use doing so. I could not follow the case at all. It is not likely she would recover. They said she took about 40 grains a day.

17761. Have you had any experience of giving opium to children?—Three or four times in the year children are brought to the Out-patients' Department where the mothers have given them opium, not sufficient to kill them, but sufficient to affect them badly. In the course of a year we get three or four such cases, particularly during the hot weather when cholera and such diseases are prevalent.

17762. Do the mothers give it as medicine?—Yes. The children get some little childish ailment; and the mothers give them a little opium. It is not a general practice. We do not see it very frequently.

17763. Is it an accidental over-dose?—No; I think the women give opium to the children regularly. If the children are weak and pale without any apparent reason, then I immediately ask the mother: I do not say, "Do you give this child opium?" I say, "How much did you give this child?"

17764. It is a kind of marasmus, I suppose?—Yes.

17765. The practice of giving opium to infants is not so common here?—It is not so common as in Lucknow. It was very common there, I believe.

17766. This is not a very malarious town, is it?—We have a good deal of fever here.

17767. Have you seen cases of enlargement of the spleen?—We have constantly cases, both in the Out-patients' and In-patients' Department.

17768. Have you seen cases in young infants?—Once or twice; but it is not very common. It has not been brought to my notice very commonly. Ours is a hospital for women, and of course we do not get a great number of children. Out of our daily average of a hundred patients we get about fifteen children.

17769. Children up to what age?—Children up to nine—from quite babies up to the age of nine.

17770. You have seen a few cases of enlarged malarial spleen?—Yes. In children from the age of five to ten it is much more common. I have now in the hospital at the present moment two children, one seven and the other ten; both have very large spleens.

17771. Have you thought, or understood, or heard that opium is given to children to mitigate the danger of malarial fever?—They do give it to children in that way to mitigate malarial fever; but I think they get it more from the native doctors; I do not think they themselves dose their children for that reason.

17772. Has it come to your knowledge that there is a belief amongst the native doctors that it is more or less useful as a preventive for malarial fever?—I know that is believed.

17773. You do not yourself believe that it can act as a prophylactic?—No, I do not; but I know it is a belief here.

17774. That it is useful in diminishing the risk?—Yes.

17775. Would you yourself go so far as to say that that is a correct opinion?—No, I have not tried it sufficiently to give an opinion upon that at all.

17776. Have you tried opium in the treatment of malarious fever?—Yes, with quinine.

17777. Is it your opinion that it rather fortifies the action of quinine?—Yes, if you choose your cases. If a woman is very much weakened from any other disease, say pneumonia, and she gets an attack of malarious fever, and you give her opium with quinine, I have found that the effect of the quinine seems to be more sure and more prolonged.

17778. (*Mr. Pease*.) We have had evidence with regard to Sikh troops that a very large proportion of them take opium only in winter, do you think that is the case with the women in Lahore?—I had the case of a woman the other day who came into the hospital: I thought it just possible that she had taken opium, from the history of her case, to diminish the pain she was suffering from. She was a Mahomedan woman, aged 30. Seven years ago she had an attack of rheumatism, and she began to take a little opium daily. She told me she took one *ratti*, which is nearly two grains. She continued this for several months. She got better of the rheumatism, but every winter since that she said she had taken a little opium. I asked her whether she took it in the summer; and she said she did not take it in the summer as she did not want it. That is one case that has come under my notice. There may be many more, but I cannot bring them to my mind just at present.

17779. You do not know of it as a general practice?—No.

17780. (*Mr. Wilson*.) You have said that you know that a good deal of opium is taken amongst the upper classes of the women in Lucknow?—Yes. I only know from being told by the missionaries. They would say that such and such a woman takes opium. They would show me a woman in the zenana who they said took opium; but what quantity she took, or what effect it had, I could not say.

17781. You were a doctor then?—I was not a qualified doctor; but I was working as a medical missionary.

17782. You have taken your qualification since?—Yes; between the time I left Lucknow and the time I came to Lahore.

17783. That relates to the upper class women?—The zenana women.

17784. Did you know about the lower class?—Yes; we had a dispensary, but I never came across any women who ate opium there. The practice of giving it to their children was far more prevalent in Lucknow than in Lahore as far as my experience goes. They give it far more frequently, and in far larger doses I should say, in Lucknow than I have ever seen or heard of it being given at Lahore.

17785. We have been informed that Lucknow has a bad pre-eminence for opium-eating?—So I have been told.

17786. During your experience you did not observe that?—Not amongst the women and children; except, as I have said, that the practice of giving it to children was far more prevalent than I have observed it in Lahore. But I have been making more careful observations since I was qualified than before,—I have been in a better position to make observations.

17787. We have had several witnesses,—I think we had three medical missionaries yesterday,—who told us that they did not regard opium as a prophylactic against fever, and that it was not so regarded in this district: that is not your experience?—No. It is regarded so by the native doctors and by the people themselves in this part of India, that I know. Of course I do not know anything about what the missionaries think themselves.

17788. I am not asking you about it as a remedy?—I understand,—as a preventive against malarial fever.

17789. By whom was the hospital you have charge of founded?—When I came to Lahore in 1885 there was not a hospital. We began it after I came. The Punjab Gov-

ernment gave some money, and the Countess of Dufferin's Fund gave some, and some native gentlemen gave liberally. We got subscriptions. I had a Committee, and it was got together in that way.

17790. A Committee of management?—A Committee to collect money, and to build the hospital. When I first came to Lahore in 1885 we began in a little house in Anarkali Bazaar.

17791. How is the hospital now supported?—Partly by the Punjab Government, they give a grant every month; partly by the Municipality; partly by the Dufferin Fund; and partly by subscriptions and donations; and we have an invested fund which brings us in Rs. 69 per month.

17792. Can you give us an idea of what proportion or percentage of the women with whom you have come in contact are in the habit of taking opium regularly for daily use?—Forty-five or fifty per cent.,—about half the women.

17793. (*Mr. Mowbray.*) That is habitually?—Yes. When I say women who take it habitually I do not mean women who are saturated with opium: I mean women who take what I call a medicinal quantity.

17794. Every day?—Yes.

The witness withdrew.

SARDAR ARJAN SINGH, RESALDAR-MAJOR HIRA SINGH, PARTAB SINGH and SUBADAR BAKSHISH SINGH called in and examined (through interpreter).

17795. (*Chairman to Arjan Singh.*) I believe you are by caste a Jat Sikh?—Yes.

17796. You are at present manager of the Sikh Temple at Amritsar?—Yes.

17797. And Honorary Magistrate?—Yes.

17798. And a holder of land?—Yes.

17799. (*To Partab Singh.*) You are a Jat Sikh and land holder?—Yes.

17800. You are a resident of Jaithowal in the Amritsar district?—Yes.

17801. You were formerly Resaldar in the Native Cavalry?—Yes.

17802. And you are a Durbari?—Yes.

17803. (*To Hira Singh.*) You are a Jat Sikh and resident of Vairowal in the Amritsar district?—Yes.

17804. How long have you served Government?—I have served Government forty years.

17805. (*To Partab Singh.*) When did you enter the Army?—In 1856, in the Lucknow Cavalry.

17806. Were you in Lucknow during the siege?—Yes, in the Bailey Guard.

17807. (*To Bakshish Singh.*) You are a resident of Sirhali in the Amritsar district?—Yes.

17808. How long did you serve Government?—For 33 years. I have been a pensioner for about three years.

17809. Did you enter in the time of the Indian mutiny?—I entered in 1858.

17810. (*To Arjan Singh.*) Is the custom of taking opium common in the Amritsar district?—Yes, it is common.

17811. Do aged people generally take it?—Generally at about forty years of age.

17812. To begin to take it at that age is not thought a bad habit?—No.

17813. Is it thought a bad habit to take it at a young age?—If it is taken for self-indulgence it is considered to be an evil habit; but if it is taken for other purposes it is not considered to be a bad habit.

17814. I suppose sometimes the habit is carried to excess; is it not; do people who begin it at forty carry it to excess?—Perhaps in some cases.

17815. Are the number of cases few or many?—A very few.

17816. What do you think an excessive dose?—More than two or three rattis.

17817. Do you think that all people who take more than two or three rattis a day suffer in health?—Undoubtedly.

17818. Do you think that the habit of taking opium to excess daily affects the morals of the people?—It has never come to my notice that it has affected a man's character or morals.

17819. What effect has it: does it affect the health?—It affects the health to some extent.

17820. Is it the custom in the Amritsar district in the villages to give children opium?—Yes, it is given about half a grain of rice.

17821. What is that given for,—when they are ill, or is it given daily?—Women give it to their children, so that the children may remain asleep, and that they may attend to their work.

17822. What effect do you think it would have upon the people if Government were to prohibit the use of opium?—The people cannot object to anything; but they would not be pleased at heart.

17823. Supposing it were stopped except for medical purposes, would they still object to it?—People cannot object even if the Government deprive them of their land and other property.

17824. If the use of opium were prohibited in regiments, would it have any effect upon the discipline of the troops?—I have not served in the army; but when they are put on some great exertion they would suffer.

17825. (*To Partab Singh.*) What is your opinion upon that point?—I think that the people would suffer much, and that it would be a great hardship if the use of opium is prohibited.

17826. If it were prohibited in the regiments, what would the effect be?—They would be put to great trouble if they did not get opium when they commenced marching. They eat it without getting any express permission from their Commanding Officer, for the sake of the extra energy; and they provide themselves with it at their own cost.

17827. (*To Arjan Singh.*) Is poppy cultivated in your tahsil?—It is cultivated there.

17828. How much?—Much less than was the case in former years.

17829. What is the reason?—The rules are strict on the matter.

17830. Was it not the custom formerly for the Sikhs to drink *post*?—The custom was generally prevalent. Several persons have now given up its use on account of the strictness of the rules.

17831. Under the present rules they have to sell the heads of the poppy to the licensed vendors?—Yes, all.

17832. You do not remember the Sikh times?—I have heard about them.

17833. Do you know what the rules were about poppy in the Sikh times?—It was free then, everybody could cultivate it: there was no restriction.

17834. Do the licensed vendors now give a fair price to the cultivator?—No, they do not give the cultivators a fair price. They look to their own profits.

17835. Do you know how much extra tax is put on the cultivation of poppy?—Either one or two rupees. I do not know very well. I used to cultivate; but now I have

given up the cultivation as one has to court the favour of the licensed vendors. I am a land owner myself.

17836. (Chairman.) Are the other gentlemen of the same opinion; do they agree?—

(The Interpreter.) Yes, they are all of the same opinion.

17837. Would any of you like to add anything?—
(Hira Singh.) I wish to say that I take 4 rattis of opium every day. I have taken it for the last twenty-two years.

17838. (To Hira Singh.) What was the reason you began taking opium?—I was suffering from headache and colds. The doctor kept me in the hospital for seventeen days, and when I was cured I asked what medicine I had been treated with, and I was told it was the essence of opium.

17839. Was that in Cantonments?—It was in the Gohar district.

17840. Was there war going on then?—The officer was in camp and accompanied me. I increased the dose to 4 rattis in the Kabul War. I remained very strong, and I now feel myself strong. I am now 64 years of age, and I am ready to grapple and try conclusions with persons 40 years of age.

17841. (Mr. Wilson to Arjan Singh.) Is it a good thing for young men who are in perfect health to take opium regularly?—Even if a meal is taken without necessity it does harm. Why should not opium do harm if taken without necessity?

17842. (To Partab Singh.) Is it good for young men who are in perfect health to take opium regularly?—No one takes it of his own free will without some illness.

17843. (To Hira Singh.) Is it good for young men who are in perfect health to take opium regularly?—I began to take opium in 1864 owing to headache. My first dose was 1½ rattis in the morning and 1½ rattis in the evening. Ever since I have enjoyed good health. My dose has remained the same throughout.

17844. I want a distinct answer to my question. Do you agree with what the other two have said?—I agree with them. Even if a meal is taken without necessity it does harm; opium is a poison, and therefore it does so much more harm.

17845. (To Bakshish Singh.) Do you agree?—I agree.

17846. (Mr. Wilson.) Do these words occur in the writings of Gura Granth Sahib: "*Charas, bhang, posti, sub nindak kartar*"—which being translated means "Those who use *Charas, bhang* and poppy are all hated by Almighty God"?—

(Arjan Singh.) *Charas* is prohibited among the Sikhs.

The witnesses withdrew.

and Gulab
Singh.

Sardar BULAKA SINGH, Sardar ATMA SINGH, Maulavi ALLAH BAKSH, Zaildar, Resaidar-Major KAHAN SINGH, Subadar-Major HIRA SINGH, Ex-Subadar SANT SINGH, SODHI INDAR SINGH, JAMIAT SINGH, Zaildar, GURU BISHEN SINGH, TULSI RAM, and GULAB SINGH called in and examined (through an interpreter).

17857. (Chairman to Indar Singh.) I believe you are an Honorary Magistrate at Ferozepore?—Yes, and Civil Judge.

17858. To what family do you belong?—I am of the family of Guru Gobind Singh.

17859. (To Bishen Singh.) Are you a large proprietor of land?—Yes, I am Zaildar.

17860. What family do you represent?—That of Guru Har Shai.

17861. (To Bulaka Singh.) Are you an Honorary Magistrate?—Yes.

17862. And a large land owner?—Yes; and I am a Civil Judge.

17863. In the Lahore district?—Yes.

17864. (To Atma Singh.) Are you also an Honorary Magistrate?—Yes.

17865. And a large land owner?—Yes.

17866. (To Allah Baksh.) Where do you live?—I am a Zaildar, resident of Lahore itself.

17867. (To Kahan Singh.) Where do you live?—At Manihala in the Lahore district.

17868. (To Hira Singh.) Where is your home?—In the Lahore District.

17869. When did you join the Army?—In 1857. I have served for thirty-six years.

The words *posti* and *bhang* apply to those persons who take these to very great excess.

17847. (Mr. Wilson.) I did not ask for an explanation. I asked whether those words are in those writings?—

(Arjan Singh.) I am not aware.

17848. (Mr. Wilson.) What do the other witnesses say?—
(Partab Singh.) These words do not occur in the form they have been put down. Those persons who take fish, *bhang*, wine and alcohol lose all the meritorious acts which they have done.

17849. (Mr. Wilson to Partab Singh.) From whom did you receive these questions?—From the Deputy Commissioner of my district.

17850. Did you write these answers yourself?—I got them recorded myself in the presence of the tahsildar.

17851. (Mr. Mowbray to Partab Singh.) Did you say that you take opium?—Yes.

17852. If the Government were to say to you that you were not to have any more opium unless you went and wrote down your name as an opium-consumer, would you like it?—It would be a serious inconvenience and trouble.

17853. (To Hira Singh.) Would you object if Government were to say that you were not to have any more opium unless you went and wrote down your name as an opium-consumer?—It would be a source of great displeasure. I would object.

17854. And do you think that other people in the Punjab who consume opium would object?—Everybody would object; it would cause great hardship.

(Arjan Singh.) I wish to add something with reference to the question which has been asked. I wish to request that if Government is going to be kind to the Indian people, the greatest kindness that it can do is to abolish the sale and use of liquor, *chandu, charas* and *ganja*, which cause great harm to the people. If the system is introduced of having the name of opium-consumers registered, the people will be put to the same degree of trouble as they are put to by the system regulating the cultivation of poppy.

17855. (Mr. Haridas Voharidas.) I believe there are two classes of followers of the Guru—one called Sikhs and the other Singh. Is there any difference between the two in point of religious observances?—There is a difference.

17856. What is the difference?—Those who are Singh receive a particular ceremony and keep their hair intact, such as I am myself; whereas the Sikhs are not bound to keep all the tenets of the Sikh religion. They can keep their hair intact or not. Tobacco, too, is not forbidden to them, whereas it is forbidden to the Singhs. The Singhs and Sikhs do not mix with each other when eating.

17870. (To Sant Singh.) When did you enter the Army, —In 1857. I am a pensioner, and I own land too.

17871. Where is your land?—Close to Atari, in the Lahore district.

17872. (To Gulab Singh.) Where is your home?—I am a Zaildar in Kana Kach. I was in the Bailey Guard in the Mutiny.

17873. (To Jamiat Singh.) What are you?—I am a Zaildar in the Ferozepore district.

17874. (To Tulsi Ram.) Are you an Honorary Magistrate?—Yes.

17875. Where is your land?—In the five Tahsils of the Ferozepore district.

17876. (To Bulaka Singh.) What is your opinion about the use of opium?—It is cultivated considerably, and eaten too.

17877. Is it a good or a bad habit?—It is neither good nor bad: it is indifferent, or middling.

17878. Does the moderate use of opium in your opinion hurt the health or morals?—It does no harm if taken up to 1 ratti, but a greater quantity than that would do harm.

17879. Do you think that prohibition of its use by Government would be a good thing or not?—It would be good, but the people would not look upon it as good.

17880. I suppose you mean that the motive is good, but the people would not like it?—It would be a good thing

if people did not take it in the future, but the people will complain bitterly.

17881. Which do you think does the most harm, the use of opium or the use of alcohol?—Alcohol does greater harm than opium.

17882. Is opium much used by the people in their houses as a domestic remedy or medicine?—They do not use it frequently, but as medicine they use it in their houses. They do not take it when in good health.

17883. Is it commonly used as medicine?—Yes; it is used for children. The milk they receive when being suckled is very cold, and if a little opium is taken with it it does good. It prevents the consequences of phlegmatic tendencies, which would otherwise result from cold milk, and it cleanses the blood too.

17884. (To Indar Singh.) Do you agree?—Yes. I may add it is used by agriculturists and others having hard work, such as the cutting of crops. All people frequently take it.

17885. (Bulaka Singh.) It removes fatigue after long journeys. People take it whether they are well or not.

17886. (Chairman to the Interpreter.) Do they all agree?—(The Interpreter.) Yes.

17887. (Chairman.) Do any of the other gentlemen wish to say anything in particular?—

17888. (Jamiat Singh.) Of the consumers there are many who take it in place of alcohol. They have been able to give up the use of alcohol by taking to opium.

17889. (Tulsi Ram.) I agree with what has been said.

17890. (Mr. Wilson to Bulaka Singh.) I wish to know whether you did not say that no healthy persons use opium?—I have said that the healthy person does not take it without necessity, such as disease or when a long journey has to be performed, or some hard work has to be done.

17891. (Mr. Haridas Veharidas.) I should like to know what you consider an excessive dose?—

(Bulaka Singh.) I think more than 2 rattis a day an excessive dose.

(Allah Baksh.) Two or three rattis.

(Indar Singh.) More than 4 rattis.

(Bishen Singh.)—More than 4 rattis is excessive.

(Tulsi Ram.) More than 4 rattis.

(Jamiat Singh.) More than 4 or 5 rattis.

(Kahan Singh.) More than 5 rattis.

(Sant Singh.) More than 4 rattis is excessive.

(Hira Singh.) More than 1 or 2 rattis.

(Atma Singh.) The quantity that does not make one senseless. Up to that limit it is moderate. When it makes one senseless it is excessive. It is not the quantity: it depends upon the constitution.

17892. (Gulab Singh.) I think 4 or 5 rattis would be excessive.

17893. (Mr. Mowbray.) How many of these gentlemen are opium-consumers?—

(The Interpreter.)

There are eleven of them, and six say they are opium-consumers.

The witnesses withdrew.

Adjourned to to-morrow at 11 o'clock.

At the Town Hall, Lahore.

FIFTY-FIRST DAY.

Saturday, 20th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHAJAYA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VEHAIDAS DESAL.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., Secretary.

SHAIKH KHUDA BAKSH called in and examined.

17895. (Mr. Wilson.) Are you a Judge of the Small Cause Court?—Yes.

17895. How long have you been in that position?—About four years and some months.

17896. How long have you been in this city?—Four years.

17897. You have been a Magistrate?—For 22 years, and in Government employment for 28 years.

17898. Will you be so good as to give us briefly any information you have as to the effects of the habitual consumption of opium?—In my opinion, as far as I have learnt by my experience, the effects of opium are particularly bad on young men, and generally on all people.

17899. Have you anything to add?—If people give up this habit they improve their health and moral powers—they improve morally as well as mentally.

17900. Do you consider it has a bad effect on morals?—I consider so.

17901. In what way does it show itself?—My experience shows that many people are demoralised by the habit. I know many personally, and I can give their names.

17902. In what classes of society, rich or poor?—In middle society—the middle classes.

17903. Have you anything to say as to the physical effect on their bodies?—Yes, I can cite examples in which young men of good temper and disposition have become simply ruined and have at last died.

17904. Have you anything to say as to its financial effect on their property and so forth?—It was ruinous to them because they were lazy in their work; they could not work and at last they were ruined.

17905. Will you tell us what you think of the proposal to prohibit the sale of opium, except for medical purposes?—I would support it.

17906. Why would you support it?—Because I think its general use is bad. It is injurious to the people, but certainly exceptions should be made in favour of medical practitioners, as well as for those who are habitually addicted to it.

17907. Those who might suffer on account of the sudden stoppage?—Yes, some people suffer temporarily. They can give up the habit, but it will of course press hardly on them in the beginning.

19 Jan. 1894.

Shaiikh Khuda
Baksh.
20 Jan. 1894.

Shaikh Khuda Baksh. 17908. Is that your own individual opinion only, or do you think that the public opinion of this part of the country would justify such a measure?—In my opinion it is the general opinion—it is not my private opinion.

20 Jan. 1894

17909. We have been told that the use of opium is so customary among the people that it would cause serious discontent, almost amounting to political danger, to interfere with it?—I do not think it is true.

17910. You think it is not true?—I do not think it will last, it will certainly spread discontent among those who are addicted to it, but it will only be a temporary thing, and, if you could make special provision for that, there is no danger at all.

17911. Are you aware that in Burma special provision has been made for these persons by means of a register?—I have heard so.

17912. So that they might continue to get their opium?—I have heard so, and I think it is the best thing under the circumstances.

17913. Do you think people would feel it to be any indignity and insult to them to ask them to register in that way?—No, of course the people who like to continue the habit will go on, and there will be many respectable persons who will give up the habit rather than have their names put on a register, and it will be a boon to them at last.

17914. (*Mr. Mowbray.*) I should like to ask if you could explain exactly what you mean by medical purposes and how you would propose to provide for the use of opium for medical purposes?—I would propose that licensed men who are local practitioners or druggists may be allowed to have a certain quantity.

17915. Are druggists at present required to take out licenses?—I suppose so.

17916. You do not know?—I am not certain about it.

17917. How would you decide who is to be licensed and who is not?—Of course it will be necessary for the provincial local officers to select persons of respectability on whom reliance can be placed.

17918. You are aware that the sale of opium would probably be very profitable to these druggists who are licensed?—Yes, but they will pay a proper share to Government, and this will be some compensation for the loss that Government will sustain by the general prohibition.

17919. You propose that they should pay for their licenses as opium shops pay at present?—Yes, of course that will be regulated according to the circumstances of the time.

17920. Do you think that you would have more druggists' shops opened for the sale of opium under this system than under the present system?—I think that the shops which are now open would do for the purpose.

17921. You mean that the existing number of shops are sufficient?—Yes.

17922. Can you give me any idea how many druggists' shops there are in the city of Lahore?—I think altogether not less than 15 selling European medicines.

17923. Would you limit the licenses to those who sold European medicines?—I think not. I would allow any respectable druggist according to the discretion of the District Magistrate. I would empower the District Magistrate to exercise his discretion to the best of his experience and ability.

17924. (*Mr. Haridas Veharidas.*) Are you a Mahomedan?—Yes.

17925. Do you follow the Mahomedan religion?—Yes.

17926. Is opium expressly prohibited in that religion?—I think it is specially prohibited. The word opium is not mentioned expressly in the Koran, which is the chief book of our religion, but the word "Sukkar" means intoxicating drug, and in many of the sayings of the Prophet the word "Sukkar" occurs, and it also occurs in the Koran.

17927. Is the word alcohol also included in that?—The word alcohol is expressly mentioned in the Koran; and "Sukkar" is the exact translation of intoxicating drug.

17928. May I ask you why in the Koran alcohol is expressly prohibited, and opium is not?—The reply is very easy. The evils or the good actions are not exhausted and they cannot be enumerated in any book in any age. The evils, of course, can be spoken in a few words, and you can enlarge them. In such matters the Mahomedans are guided by "Koran," "Hadis" (sayings of the Prophet), "Ijma" (general opinion of the leaders) and Kayas (analogy).

17929. I understand from what you say that alcohol is more injurious than opium?—Certainly, I am of opinion that spirits are more injurious than opium.

17930. Is it more objectionable from a religious point of view?—Certainly, and more expensive too.

17931. You say opium is not to be used except for medical purposes?—Yes.

17932. You know that human nature is inclined to take some sort of stimulant; if opium is stopped, will not the people take to alcohol?—I think the common people would not take to spirits for want of money; and besides that, although wine is substituted by opium, opium is not substituted by wine.

17933. Is opium never substituted by wine?—Never, according to my experience—it will not be to a very great extent substituted by wine.

17934. Why is opium substituted for wine?—It is sometimes substituted for wine by those who want to give up the habit of drinking. In my opinion people who give up drink do not reform by taking opium as a matter of course.

17935. (*Mr. Fanshawe.*) In speaking of the instances of moral and physical injury, have you been referring to the excessive use of opium?—Not very excessive, in some cases moderate, and in others more than moderate.

17936. You said that you had seen many instances of such injury, would you kindly tell us generally how many you mean?—I could quote about five or six at present.

17937. Do you recognise that there is a moderate use of opium among certain classes in the Punjab?—Yes, there are certain people who only use it moderately.

17938. You will no doubt understand that in this enquiry we must look at the matter as a whole, and see what conclusions can be drawn between the moderate use on the one hand and the occasional cases of abuse on the other—you would admit that?—Yes.

17939. You have spoken of a general opinion in favour of prohibition except for medical purposes, would you kindly say by what classes that general opinion would be held in the Punjab?—In my opinion people of all classes are against it; but they would not give evidence against it, because they fear taxation, which will be the result, they say, if opium is suppressed.

17940. Do you believe that of the Sikh community as well as of the others?—I would say so, of Sikhs, Hindus, and Mahomedans.

17941. (*Sir James Lyall.*) You said that opium is sometimes substituted for wine?—Yes.

17942. You also think that wine is never substituted for opium?—Yes.

17943. Is that because wine is more enticing, or what is the reason?—Wine is more costly; opium is cheap.

17944. Therefore people take to the cheaper thing?—Yes. The people of the Punjab are generally poor, they would rather take a thing that would cost less.

17945. You are in favour of prohibiting opium except for medical purposes?—Yes, and I would also make an allowance for those who are addicted to the habit.

17946. I believe you are aware that in the Punjab and in other parts of India there is practice of taking opium in small doses after 40 years of age, when a man begins to feel his sight and other powers are beginning to fail?—Yes.

17947. Do you consider that use after 40 years of age in small doses a medical or a non-medical use?—Of course the popular opinion is that small doses after 40 or 50 years are useful. This is the popular opinion amongst the Punjabi, but according to my experience, I can quote instances,—it is not the real fact. It is injurious even in old age.

17948. When you proposed to prohibit opium except for medical use, how would you treat that use of it?—I would allow it for medical or quasi-medical use.

17949. I believe in the villages and in the small towns where there are no doctors, very few Hakims or Vaidis, opium is greatly used by the people as a domestic medicine, is it not?—That is not my opinion. In the villages where there are no Hakims they use other things. They prescribe other medicines, but not opium.

17950. I thought opium was generally used all over the country?—It is in general use somewhere.

17951. Is there any other drug which has anything like the same general use as opium in the Punjab, away from the dispensaries and doctors—is there any other drug which

has the same general use as opium?—There are other medicines. We the Punjabis do not use it as domestic medicine. It is generally used by doctors who treat after European fashion. Opium is not used by the Ynnani Hakims and Vaidis very much as medicine. There might be some few exceptional cases, but it is not known as a common medicine.

17952. When a child has bowel complaint, or when a man has pain in the stomach or rheumatic pains, do not they use it in the villages?—They give it to noisy children to quiet them, but my experience has shown that it has proved fatal in these cases.

17953. Do you not think it useful in cases of rheumatic pains?—No, the Hakims do not use it. There may be some exceptional cases, but it is not known amongst us as one of the chief medicines.

17954. Are you a native of Lahore?—Amritsar is my native place.

17955. Have you never lived in the villages—cantonment?—I have seen military stations, such as Ferozepore, Dera Ismail Khan, and Edwardesabad or Bannu, where I was posted as Magistrate.

17956. You have not lived in the villages?—No. But when I was an Extra Assistant Commissioner and a Tehsil-dar, I used to go to villages oftener than I do now, and I know of village life.

17957. You said you would give a license to sell opium to all respectable druggists?—Yes.

17958. Native as well as European?—Both. There are many shops of European druggists among the native shops.

17959. You mean Pansaris?—No; druggists who sell medicines after the European method.

17960. Not natives?—Natives also, Pansaris of the first order.

17961. How many Pansaris of the first order are there in Lahore?—Very many? I think not less than a hundred, perhaps 200 in Amritsar and 200 in Lahore.

17962. Would you give licenses to all these men?—No, I would select respectable men only among the native medical practitioners.

17963. You say they should pay a license fee, how would you fix the amount?—According to local requirements. We shall have estimates from the Excise establishment and give them licenses according to grades—first, second and third class—according to the means and sales of each firm. This will give good income to the State, and some compensation for the loss it would otherwise sustain.

17964. How many opium shops do you suppose there are in Lahore?—8 or 9.

17965. In the town?—Yes.

17966. You would have a great many more places for selling opium under your scheme than now?—Only for medicines, to be sold only to sick persons.

17967. How would you prevent them from selling to other people?—They would bring the doctors or the Hakim's prescription.

17968. Would it not be very easy to get a Hakim to give a prescription?—Yes, of course, that cannot be helped. Everything can be smuggled, but it will prevent the evil to a great extent. Any prohibition of course is evaded, but the result would on the whole be good.

17969. Is it not difficult in this country to prevent evasions of that sort? If you give a discretion or power to a lot of people like that, would it not be very difficult to prevent it being abused?—Certainly it is difficult, but the District Magistrate would be the responsible authority for selecting only suitable persons. Of course all persons will not be considered wrong-doers.

17970. (Chairman.) Under the order of reference to this Commission we are especially, among other things, directed to ascertain the disposition of the people of India in regard to a policy of prohibition such as you have recommended. You have said that you believe the restrictions upon the use of opium for other than medical purposes would be approved?—Yes.

17971. Can you give us any evidence that there is that general disposition to support a policy of restriction that you say exists?—Yes.

17972. Can you give us any evidence in support of your statement that a policy prohibiting the use would be approved by the people?—Yes, many respectable persons

have spoken to me on the subject. Of course I have only *Shaiikh Khuda Baksh* their word about it.

17973. Of course you have only intercourse with a certain limited number; you cannot claim to speak on behalf of the population at large. Can you give us any instance of a collective expression of opinion?—Not a collective expression of opinion, simply statements that have been made during conversation, there are no particular data about it.

17974. You cannot point to any evidence?—No, it is only the opinion of certain enlightened persons. For the last two or three days I have met many respectable persons who have said that in the first instance it is very difficult to prohibit opium, that Government's position would be awkward, and so it will not be carried out. They say, "If it be carried out, what will be the financial position of the country?" so that the best thing is to remain silent on that point." Many respectable persons who would be free in speaking have abstained simply because they thought it would be unnecessary to come and give evidence and take all the trouble for nothing. The financial condition of the country is bad, and they fear from the very word "Taxation."

17975. You say that many respectable persons whom you have lately met have said it would be difficult to make any change at present?—Yes.

17976. (Sir James Lush.) These respectable persons you talk about are the enlightened people of the town?—Yes, enlightened people of the town whom I have met lately, certainly not the villagers.

17977. What proportion of the people in the town are enlightened? I suppose in the town a great many of the people are not a bit enlightened?—Yes.

17978. What proportion do the enlightened portion of the people bear to the population—are they one per cent.?—Of course, taking "enlightened" in its restricted sense the proportion is very small, but by "enlightened" I consider the men that are sensible men. In my opinion half the population of Lahore are sensible, men who have common sense. I suppose by enlightened men you mean the pleaders and newspaper-writers, and so forth.

17979. You mean sensible men, men more or less educated?—Yes, and even among the uneducated classes there are several men who live in Lahore which is the capital of the province, and which was the old capital of the Moguls and have common sense.

17980. Do you think that all who have common sense in Lahore agree with you?—Not all, of course I have seen many persons who agree with me.

17981. (Mr. Pease.) Do you apprehend that if there was a prohibition of opium, there would be any rioting or disturbance?—No.

17982. Do you fancy there will be any want of discipline in the army?—No; we will make allowance for the persons that are accustomed to it, and there the matter ends.

17983. I understand your view generally is that it is a bad habit, and anything that Government can do to lessen the consumption will be in the right direction?—Yes.

17984. (Mr. Wilson.) Will you tell us whether you have any information with reference to some of the Mahomedan Associations in the city?—Yes, the Mahomedan Associations are against its free use.

17985. Will you tell us for what purpose these Associations exist; are they in this city?—Yes, there are two chief Associations among these Associations, the Anjuman Islamia and the Anjuman-i-Hamait-i-Islam. They exist for the welfare of the communities they represent; the latter is chiefly devoted to the maintenance of education and orphanage.

17986. What is the number of members in these Associations—have they many?—Yes, the Anjuman-i-Hamait-i-Islam is the most extensive in numbers, it has members all over the Punjab and many parts of India.

17987. The other Association is limited to the town and the Punjab?—The Anjuman-i-Hamait-i-Islam is the junior element, but it is spreading and taking influence all over India.

17988. I understand you to say that the fear of additional taxation is a great terror in the minds of people; and if it was not for that, there would be a very large amount of feeling in favour of prohibition?—Certainly, I say and affirm that.

17989. Are you specially authorised to speak on behalf of these Associations?—No, although I am a Vice-President of the Anjuman-i-Hamait-i-Islam.

The witnesses withdrew.

Mahr Singh.

MHR SINGH called in and examined (through an interpreter.)

- 27 Jan. 1894. 17990. (Mr. Pease.) Are you a Sikh?—Yes.
17991. Was your father a Subadar in the Sikh Army?—Yes.
17992. At the present time you keep a furniture shop?—Yes.
17993. What is your age?—Fifty-six years.
17994. Are you in the habit of consuming opium?—Yes.
17995. How long have you consumed opium?—For the past 12 or 13 years.
17996. What is your view with regard to the practice of taking opium?—I have only emphatically to declare that, if deadly enemy come to me for advice to eat opium, I shall not advise him to addict himself to this formidable vice. I always advise my sons and anybody who asks me, never to touch opium, which is worse than snake-poison. First it gives little sensual pleasures, but afterwards man loses his manhood, and become worse than woman in manly characters. It ends in various kinds of misery. It is often said that Sikhs are a brave nation and they use opium, but I have to say that Sikhs generally are worn out after 40 years when they become quite useless for work, and they only sit in the verandah of their houses, and their days are passed in stupefaction. When people become old, or approaching to old age, some diseases, as cold, catarrh, etc., attack them, so illiterate villagers and some old men advise them to take opium, but they are not themselves physicians or medical men, and when advised by these unprofessional men, entangled in this vice they become powerless, and so they drag their miserable life and are cause of disgrace to society.
17997. Why are you a consumer of opium?—A foolish person advised me to take opium as I used to be ill.
17998. What quantity do you take?—Four rattis a day, two in the morning and two at another time.
17999. What quantity did you take when you first began to take it?—Two rattis a day.
18000. Have you ever given up the habit of taking it?—No, I have not given it up.
18001. Have you ever consulted a doctor to ask his assistance in giving up the use of opium?—I have not consulted the doctor.
18002. Why not?—Generally people take opium and they say it is a good thing.
18003. You say opium is a bad thing, why have you not tried to give it up?—I wish that I may meet some doctor who will enable me to give up its use—then I should be ready to do so.
18004. (Mr. Mowbray.) How do you spend your own days?—I am strengthened when I take my dose for a quarter of the day, or three hours. Subsequently I feel myself uneasy and restless, my joints suffer.
18005. Do you sit in the verandah of your house and pass your days in stupefaction?—Up to the present I am able to look after my work.

The witness withdrew.

Bakshi
Ram
Labhaya.

BAKSHI RAM LABHAYA called in and examined (through an interpreter.)

18025. (Mr. Wilson.) Were you formerly Private Secretary to the Maharaja of Jammu and Kashmir?—Yes.
18026. Are you the Proprietor of the *Dost Hind* and Wilson Press, and also of the Wilson Press at Bheri?—Yes.
18027. Do you approve of the use of opium by persons in good health?—I do not approve of it. The use of opium is suicidal. It can be more easily obtained than other poisons. Every man can buy from the contractors as much quantity as would be sufficient to kill a man. Poor people begin to use it in small quantity, and it proves injurious to them in the long run. My charity house, which is open to the poor, is often frequented by feeble-bodied men who, on enquiry, name opium as the cause of their being so weak and feeble. Its use in large quantities is certainly injurious to the human physique. It is very useful when used as medicine. Some pleasure-seeking men use it when it is cold, as others use wine under the similar circumstances, and in that case it ought to be preferred to wine, because it is cheaper than the latter article. Some young men use it to prolong the sexual pleasure. But taking all things into consideration, its use is not so injurious as that of spirits. Cultivators cultivate it with great pleasure. Those who are accustomed to its

18006. Then it is not true that all opium-eaters after the age of 40 are worn out?—An opium-eater for the first two or three years remains strong—that is what I have carefully tried. It does good to a person who is of a phlegmatic disposition, but a man who is bilious and has a hot-blooded temperament does not derive any benefit from it.

18007. Did your father take opium?—He used to take opium in old age, but only a little of it.

18008. What was his age when he died?—He died at the first Battle of Mudki.

18009. Was he killed at Mudki?—He was killed—he used to receive a pension.

18010. (Mr. Haridas Voharidas.) I think you said that two or three hours after taking opium you are all right?—Yes.

18011. And that three hours after you have taken your dose you feel very weak?—Yes.

18012. For three hours, whilst you are under the influence of opium, you can work very well?—Yes.

18013. After that you are unable to work?—I cannot work after that. I lie down on the bed.

18014. (Mr. Fanshawe.) Where do you live?—In the city.

18015. Have you lived all your life in the city of Lahore?—I have got a village and a well outside.

18016. Have you lived here all your life?—Yes.

18017. We have been told that many Sikhs begin the opium habit at the age of forty; is that correct in your opinion?—There is no general rule; people begin to take it for some disease; there is no fixed rule.

18018. What is your caste as a Sikh?—I am of the caste of Ramgarhia, that is to say, a Sikh who is a carpenter by caste.

18019. Is it not the case that the Sikhs generally are hard-working, thrifty, and well-to-do people?—It is.

18020. Would that be possible if the Sikhs generally, as you state, became useless after forty years of age?—Those who take opium become absolutely useless.

18021. (Sir James Lyall.) Do you deal in wine?—No.

18022. What sort of furniture do you sell?—Chairs and tables.

18023. (Mr. Wilson.) Do you think it would be a good thing if Government were to prohibit the sale of opium except for medicine?—I look upon it as a bad thing, and I think it should be prohibited.

18024. Do you think that the Sikhs in Lahore and the Punjab would be satisfied or pleased if it were prohibited except for medicine?—Those who have not taken it would like to take it and would feel pleasure in taking it, whereas those who have taken it already would thank God if they would get rid of the habit.

use begin to suffer from purgation in after-life, and thus their death is caused. In many cases, when used as medicine, it proves highly useful. Those who use it in large quantities have been observed worthless and feeble. Its use in large quantities dries the blood and weakens the body. Those who use it will certainly feel great trepidation if they knew that its cultivation was going to be stopped.

18028. Is there much cultivation of opium in your district?—Yes, much more than in several districts.

18029. Is the cultivation popular with the people?—Generally the people like it, the reason being that they are not put to much trouble in cultivating the crop. If they were to sow wheat or some other crop, the Lumbardars or friends or some other person might borrow the produce for fodder for their cattle or some other purpose.

18030. (Mr. Haridas Voharidas.) In a friendly way, but without the intention of returning it?—Yes.

18031. (Mr. Wilson.) Would it be a good thing for Government to prevent the sale of opium excepting for medical purposes?—It would not be harmful if it were stopped excepting for medical purposes, but it would be

harmful if it were stopped for those persons who are addicted to it.

18032. Would you like the Government to prohibit it under those conditions?—Sudden prohibition would be harmful to those persons who take it at present.

18033. If the sale were stopped excepting for medical purposes and except to those persons who are already accustomed to it, would that be a good thing?—It would be a good thing.

18034. Do you think that other people besides yourself would approve of that being done?—There are several persons who would approve of it.

18035. What would most people say?—Those who are not accustomed to it are afraid that if its general use spreads in the present way, it will be harmful.

18036. Do you think that prohibition under those circumstances would cause any riots and disturbances?—No riot would be caused as those persons would be provided for who are addicted to the habit.

18037. (*Mr. Mowbray.*) How long were you Private Secretary to the Maharaja?—I was in the State 15 or 16 years, but was Private Secretary for about 2 years. My father was an officer in the State, in charge of the Medicine Stores.

The witness withdrew.

MR. HIRA LAL KAPUR called in and examined (through an interpreter).

18047. (*Mr. Wilson.*) Are you Secretary to the Khatri Sabha?—Yes.

18048. What is the meaning of the Khatri Sabha?—It is a Committee on behalf of the Khatri.

18049. Are you a member of the Royal Family of Burdwan?—Yes.

18050. And a zemindar?—Yes.

18051. And proprietor of the *Khatri Samachar* news paper?—Yes.

18052. What special opportunities for observation have you had with regard to the use of opium?—I had two opportunities—one in Burdwan and Bengal and the other at Lahore.

18053. Are you a Sikh?—I am a Khatri.

18054. Were you the Manager of your uncle's opium-shop?—Yes, at Umballa Cantonment, in 1888.

18055. What motives induce the people to form the habit of eating opium?—Those who take it at about 22 or 25 years of age take it for sensual gratification, those who take it after they are 40 years of age take it only in small quantities of one and-a-half rattis to prevent colds, and then only occasionally, not daily.

18056. Is there a general tendency to increase the dose?—Those who take it for sensual gratification increase the dose, but those who take it for diseases in their case the dose cannot be increased.

18057. What are the results of the habit of taking opium?—Many evils flow from it.

18058. How many opium-eaters suffer very much from it in proportion?—About 50 per cent. suffer from it.

18059. In your evidence you say that it is 90 per cent.?—It is 90 per cent., that is quite correct. I had leisure at the time and I made enquiries.

18060. You have no statistics?—I have some books prepared by me against opium to show that.

18061. Do the people believe that opium protects them against fever?—No, not at all.

18062. Do you think that it protects people against fever?—Impossible.

18063. Does it help people to get through hard work?—Not at all, it makes them lazy and unable to work; they remain in a dormant condition.

18064. Is the eating of opium considered disgraceful?—A person who takes opium in excess is looked upon with contempt, as he does not bathe or wash himself and remains for months at a time in a filthy condition. If he bathes, he becomes ill.

The witness withdrew.

18038. Are you a native of Kashmir?—No, I am a native of the Shahpur District, but I have seen Kashmir several times.

18039. How long have you been proprietor of the paper and the Printing Press?—Seven and a quarter years. 20 Jan, 1894.

18040. Is that ever since you ceased to be Private Secretary to the Maharaja?—Since the Maharaja died.

18041. (*Mr. Haridas Veharidas.*) Will you tell us the expense of your charity-house and how many people do you entertain?—About 40 persons a day.

18042. At your own expense?—I keep the poor-house at my own expense.

18043. (*Sir James Lyall.*) Does your paper represent the Aya Samaj?—No.

18044. What does it represent?—Nobody, the Mahomedans as well as the Sikhs subscribe towards it.

18045. Were you Private Secretary to the late Maharaja or to the present Maharaja?—To the present Maharaja while he was heir-apparent to the throne.

18046. (*Chairman.*) Would you propose to extend the same prohibitive regulations to the use of spirits as you have already advocated with reference to opium?—The same prohibition.

*Bakhshi
Ram
Labhaya.*

20 Jan, 1894.

*Mr. Hira
Lal Kapur.*

18065. Is it a good thing for people who are in good health to take small doses of opium?—It is not a good habit.

18066. Would it be a good thing if the sale of opium were prohibited except for medicine?—The general sale ought to be prohibited, it should be sold like other medicines.

18067. (*Mr. Mowbray.*) When you say it should be sold like other medicines, is there anything to prevent anybody setting up a shop in Lahore to-morrow and selling any medicines he likes?—Everybody can open a shop for the sale of medicines.

18068. (*Mr. Fanshawe.*) Of how many members does the Khatri Sabha of Lahore consist?—Eighty members.

18069. Are they all members of the same caste, Khatri?—They are all Khatri of different denominations as amongst the countries.

18070. At what intervals is the *Khatri Samachar* newspaper published?—Twice a month.

18071. Can you tell me generally what is the number of subscribers to the paper?—About 400, the number is larger in the town than in the outer circles.

18072. Four hundred subscribers every fortnight?—About 400, sometimes 10 more or 10 less.

18073. (*Sir James Lyall.*) Are you a Kapur Khatri?—Yes.

18074. How many Kapur Khatri are there in the Punjab?—A large number.

18075. How many thousand?—About 4 or 5 thousand.

18076. What do you mean by saying that you are a member of the Royal Family of Burdwan?—I was married there to the daughter of the uncle of the present Maharaja.

18077. Was the present Maharaja adopted by the late Rani?—Yes.

18078. Who was his father?—The Hon'ble Raja Ban Behari Kapur, C.I.E.

18079. Was that gentleman a Punjabi or a Bengali?—A Punjabi.

18080. Was the father of the boy a Punjabi or a Bengali?—A Punjabi. He was born in Bengal.

18081. Were you born in Bengal?—I was born in Lahore.

18082. You are connected by marriage with the father of the adopted son?—Yes.

18083. Would you recommend that the same prohibitive policy should be adopted in regard to alcohol as has been proposed with regard to opium?—No, opium is more injurious than alcohol. Alcohol is not so very injurious. I would not recommend the same prohibitory measures.

Mr. F. R. 7930. (*Mr. Pease.*) You found that the men could not
Bagley. work without it?—They cannot work without it; they
16 Dec. 1893. will not work without it. If their supply of opium runs
short, they simply drop work until they get some.

7931. (*Sir William Roberts.*) I suppose amongst them
those who do not consume opium would be the exception?—
I should say there would be from 20 to 30 per cent. excep-
tions.

7932. Those exceptions would do their work as well as
the others?—If the opium ran short, the whole lot stopped
work, both opium-smokers and non-opium-smokers. Opium-
smokers would be in the majority.

7933. (*Mr. Mowbray.*) When you supply opium to
your workmen in that way, how do you manage to get from
the Government shop a sufficient supply?—We get special
sanction from the Government to have more than the ordi-
nary quantity.

7934. Whom do you get that special sanction from?—We
get it direct from the Deputy Commissioner of the District,
but it goes for sanction eventually to the Local Government.

7935. Under that sanction you obtain from the treasury
as much as you require?—Yes, as much as we require,
up to a certain limit.

7936. (*Sir William Roberts.*) You sell it to the men?
—We sell it to the men at cost price.

7937. (*Mr. Mowbray.*) When you spoke of Indian
coolies, did you include the Punjabi-Mahomedans and
Sikhs in that comparison?—They are comparatively few.
They are skilled labourers, carpenters and smiths. They
would not come under the heading of coolies exactly: they
are a better class of workmen.

7938. Therefore the comparison you were drawing did
not apply to them?—No; they do earn high wages of course.

7939. (*Sir William Roberts.*) Have you had any

The witness withdrew.

knowledge of some of these Coringhis or semi-Chinese, ex-
tending over a period of several years?—They are a migra-
tory lot. I have known some Madrassis and Coringhis for
years in succession.

7940. Do you notice them deteriorate?—No; I do not
notice it.

7941. You never heard that these opium-eating Chi-
na-men although they live pretty well for some time, deteriorate
afterwards?—I have not heard such an opinion, and I have
not noticed it either.

7942. You seemed to have been very much impressed
with the different re-actions on different races with re-
gard to opium?—That is one of the particular points that
has come to my notice. It acts entirely differently on
different races.

7943. Have you thought that was due to what we call
a purely race difference, or through an acquired difference
from the growth of the habit?—As far as I know, I think
one of the points about the races that take opium is that
they come from a cold climate and they take it to warm
themselves; that is almost universal. The Indians who come
from the Punjab, for instance, where there is very cold
weather, are not well clothed, and they take opium almost
universally.

7944. The Coringhis come from the south?—They are an
exception. They are hill tribes and the climate is cold; they
have insufficient clothing and they take opium to warm
themselves.

7945. They take it to increase their power of resist-
ance?—Yes, they take it to increase their power of resist-
ing the cold.

7946. We heard the other day from an employer of these
Coringhis that a dose of opium appeared to take the place
of a meal: have you noticed that?—I have not noticed it.

Mr. H. S.
Guinness.

MR. H. S. GUINNESS called in and examined.

7947. (*Chairman.*) I believe you are the Executive
Engineer of the Mu Valley Railway?—Yes.

7948. How long have you served in Burma?—Twelve
years.

7949. In both Upper and Lower Burma?—Yes.

7950. The Mu Valley Railway I believe is in the extreme
north?—No; it is about 130 miles north of Mandalay.

7951. Will you give us your opinion on the consumption
of opium amongst your labourers?—The consumption of
opium among labourers working on the 4th Division of the
Mu Valley Railway is restricted entirely to Maingtha or
Shan Talok coolies imported by contractors from Bhamo and
the Ruby Mines Districts. During the working season
1892-93 there were nearly 500 of these men employed on
the Thechaung Gorge Section, and were principally engaged
in quarrying and blasting operations. Being powerful and
active men, they were found more efficient than the ordinary
Burmese and Indian coolies. The daily rate of pay for the
Maingtha coolie is one rupee, that for a Burman eight annas.

7952. Is that piece-work or daily labour?—Daily labour.
About one-third of the total number of Maingtha coolies
employed were smokers of opium, the drug being first
cooked and then smoked by them. The average consump-
tion is between 3 and 5 tolas weight per man per week.
When food was in abundance, and the men strong and in good
condition, the consumption of opium was greater than when
food was scarce. If consumers did not receive opium they
were unable to work, and were liable to fever and bowel-
complaints. The coolies generally smoked twice a day:
early in the morning before proceeding on work, and in the
evening on return to their huts. They worked best when
they had had a full smoke in the morning before proceeding
on work. There is not the slightest doubt of the effect of
the drug on the physical condition of this class of opium-
consumers; it acts as a powerful stimulant, without which
they are unable to work. On more than one occasion when
the supply of the drug had run short, the men have stopped
work until the opium had arrived and been distributed to
them.

7953. Did you observe any moral effect?—None. Beyond
the fact that no crime was reported from this section of the
Railway during the period when these coolies were working,
I am unable to offer any additional evidence on the effect of
opium consumption on their moral condition.

7954. The other coolies employed were mostly Burmans, I
suppose?—They were mainly Burman coolies: we had a
few Indians, but they were not in any great number.

7955. Did the Burmese take any stimulant while they
were at work; did they drink liquor?—Not to any great
extent as far as I am aware. In large works like ours there
is always a certain amount of liquor going, but no great
amount.

7956. You did not see any great amount of drunken-
ness?—No; no drunkenness.

7957. Did you ever see any of these Shan coolies tempo-
rarily intoxicated with opium?—No, never.

7958. (*Sir William Roberts.*) You say about thirty per
cent. consumed opium?—About one-third.

7959. They did not do their work any better than the
coolies who did not smoke opium?—No, I cannot say that
the opium-smokers worked any better than the other men.
At the same time if the opium consumers did not get their
opium they stopped work. There was always a great wish
amongst those who had control of the coolies—the chief
men—to be able to have a supply of opium to issue to the
men. In fact, on several occasions they have brought it in
illegally without it being issued to them.

7960. Would it not be desirable that you should exclude
opium-smokers when you hire men?—It was quite impos-
sible to exclude them. If we excluded opium-smokers,
we would have excluded the whole of this class of coolies as
far as I am aware. I never tried the experiment; but my
impression is that if we had attempted to exclude opium-
smokers (which would have been a very difficult thing to do
in a gang of coolies), it would have meant that all the men
would have been driven away. I tried on one occasion to
stop opium, but the result was that the men stopped work.

7961. They would not go on without their pipes?—No, I
had been having opium then from the licensee without the
sanction of the Local Government, but I found I had been
acting illegally; therefore I sent and stopped any further
issue of opium until I obtained the permission. The men
threatened to strike work at once if the opium was stopped.
The Local Government then sanctioned my holding for the
purpose of issue to these coolies a larger quantity of opium
than the law permits to one person.

7962. (*Mr. Mowbray.*) These Maingtha coolies are the
same coolies?—They are the same description of coolies
which Mr. Bagley referred to.

7963. (*Mr. Pease.*) Why do you think the Burmese are inferior as coolies?—They are not as powerful men. These Maingtha coolies are much stronger men.

7964. (*Mr. Mowbray.*) Who are the Indian coolies you are making comparison with?—The Indian coolies, such as we have, are very few. We have Purbeah coolies, and we have Coringhi coolies and Telugu coolies, men from Orissa; but in Upper Burma and in the parts we have been working

on lately, they have been in very small numbers.

7965. Are the Kachin coolies opium-consumers?—I cannot say, I believe some of them are.

7966. But you draw a comparison between these Chinese coolies and the Indian coolies. I want to know whether you would attribute any superiority to those who take opium?—No, not at all.

The witness withdrew.

MOUNG AUNG MIN called in and examined.

7967. (*Chairman.*) What are you?—I am a trader in jade now.

7968. In the King's time did you live at the Jade Mines?—I was the Collector of Customs in Mandalay, but I went occasionally to the Jade Mines. I did not live there permanently.

7969. Who live at the Jade Mines, and what races?—Puns, Shans, Kadus, Kanans, Kachins, Theinbaws, Samparaws, and Burmans.

7970. Did the habit of smoking or eating opium prevail amongst all these people?—Some of them used it; and some did not use it.

7971. All the tribes?—The Samparaws were the only people who all consumed opium. Of the others, one-third or one-half use opium.

7972. (*Sir William Roberts.*) Are you speaking of eating or smoking opium?—Some smoked and some ate it.

7973. (*Chairman.*) What sort of opium did they use?—Some of it they get in balls from Yunnan, and some of it they grow in their fields.

7974. In King Mindon Min's time the prohibition of

opium did not extend to the Jade Mines?—Formerly there was no prohibition, there is now.

7975. There was a prohibition in Mandalay, but there was not at the Jade Mines: why was that?—The Jade Mines are amongst the wild people.

7976. Have you ever heard amongst those tribes when smoking began?—They told me they had always used opium.

7977. (*Sir William Roberts.*) Always smoked opium?—Both smoked and ate it?—That is only hearsay.

7978. (*Chairman.*) Did they smoke pure opium, did they smoke like the Kachins?—They cut up the tender leaves of a plant, chopped them up into bits, dried them, and got a spoonful of opium and poured it over it and smoked it.

7979. Did you observe in those former days any ill-effects of opium amongst those people working in the mines?—When they smoke opium they become lazy, and when they cannot get any more opium they are apt to die: their stomach pains them. It is a habit that has no advantage.

7980. You are not a smoker yourself?—I once tried it. I gave a basket of paddy for some opium, and I tried it. The house went all round me and I did not know where I was.

The witness withdrew.

Adjourned to Tuesday next, at Rangoon.

At Government House, Rangoon.

TWENTY-EIGHTH DAY.

Tuesday, 19th December 1893.

PRESENT:

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LOWIS, *Provisional Secretary.*

Mr. D. M. SMEATON, Financial Commissioner of Burma, called in and examined.

7981. (*Chairman.*) How many years have you been in service in Burma and what appointments have you held?—I have been about eleven years in Burma. I have been Secretary to the Chief Commissioner and Director of Land Records at the same time; Chief Secretary; Commissioner of a division; and Financial Commissioner.

7982. Of what division were you Commissioner?—The Central Division of Upper Burma.

7983. Will you tell us what your opinion is as to the effects of the opium habit amongst the Burmans, and what is the general opinion of respectable Burmese people with regard to it?—I am of opinion that the use of opium by Burmans is injurious to them both physically, mentally, and morally. I am aware that the very large majority of the Burmese people (of adult age) regard the use of opium as an offence against their religion, as very dangerous to the well-being of their race, and as destructive to the unity and happiness of families.

7984. Is your own opinion as to these effects based upon your personal observation of many individual cases of physical, mental, and moral deterioration due to the habit, or upon the general opinion which you have mentioned?—I have seen a considerable number of instances of what appeared to me to be physical wreck. Of moral wreck I cannot speak from personal observation inasmuch as I have never actually detected a man committing an offence, knowing that he was an opium consumer. I have, however, seen cases of the physical wrecking of men.

7985. You are aware that some officers of experience say that they have failed to find men physically wrecked: for example, Sir Charles Bernard reported to that effect, and also Major Grey: what conclusion do you draw from that?—It is very hard to draw a conclusion from the reports of these two gentlemen. I can only say what I have seen with my own eyes. In Thayetmyo and Toungoo and Kyauk Pyu, and other places, I can quote cases of a number of men that I have

Mr. H. S.
Guinness.

16 Dec. 1893.

Moung Aung
Min.

Mr. D. M.
Smeaton.

19 Dec. 1893.

*His Honor
Sir Dennis

K.C.S.I.*

20 Jan. 1894.

thought myself it was a great mistake to abolish the Import duties, but other people thought differently.

18153. (*Mr. Pease.*) I suppose it would be your view that it is the duty of Government, as far as they are supported by public opinion, to discourage the consumption of opium merely as a luxury?—Undoubtedly we always do so—to the best of our ability.

18154. Does it occur to you at the present time that nothing more could be done than is being done at the present time by legislation or regulation?—By administration we are year by year trying to improve our methods so as to prevent smuggling and to raise the retail price to as high a point as we can safely raise it. Of course if we push the price too high we should promote smuggling and defeat our object; but our measures, as you can see from the reports of this very province, are directed mainly to raising the price. All the improved administration is to a great extent directed towards that object.

18155. The licensees, as in other parts of India, are persons I believe who purchase the right of sale by auction, and they have to recoup themselves by sales?—Quite so.

18156. Therefore there is a strong inducement to them to endeavour to push their sales?—Of course there is that, but at the same time if we make them pay very high for their licenses I should think that tends to force up the retail price.

18157. Does not it seem that these licensees have an interest in what you have told us is directly contrary to the policy of Government?—Of course they have an interest to make as much as they can, but whether they make it by large sales and low prices, or more restricted sales and high prices is a matter which depends a great deal on circumstances. At any rate, we know no other way of raising the retail price of opium or any other exciseable article except by putting as big a tax on it as possible. That is the only way we know. We should be very happy to find any other way.

18158. If the sale were undertaken by some person not interested in it, would it not be a better way?—I have not considered that question—do you mean if the retail sales were conducted by some official.

18159. I only said by some one who had no interest in the sales, would not that more fully carry out the policy of the Government?—No doubt, if you could find any way of doing away with the influence that you refer to, it would be a good thing, but I should hardly like to give an opinion upon the point without seeing some sort of sketch of the plan suggested.

18160. Of course you want to establish the principle first and see whether you can devise a plan to carry out the principle?—Of course what we all desire is to see as little opium as possible sold and at the highest price; anything that would tend to that would certainly have my approval.

18161. (*Mr. Wilson.*) You have referred to alcohol as a much greater evil?—Yes.

18162. I have no doubt you are aware that in the Queen's Commission to us there is no reference to alcohol?—I was aware.

18163. So that we have no duty to discharge in the way of balancing the respective evils?—No.

18164. Are there some districts where the revenue is said to be entirely paid out of the profits of opium cultivation?—In a certain sense, that is to say, the profit of opium cultivation would be sufficient to pay the whole revenue. In some parganas, in some portions of the Kulu valley, where I have just been, the profits of opium would be sufficient to pay the entire revenue that we levy on those portions of the country. To say that the revenue is paid out of opium is only a way of speaking.

18165. Do you mean the actual profits of opium cultivation or the proceeds of the sales of opium?—I was going to add a word about that. I am not quite sure which it is. I am speaking from my recollection of what I had read in a recent assessment report which came before me. I could not say whether the whole value of the opium was required to pay the revenue or whether it was the profits. I suspect it was the former; because the Settlement Officer who wrote the report would hardly have framed an estimate of the profits on the opium cultivation.

18166. In speaking about taxation and so forth, are you referring particularly to the Punjab or to India at large?—To all I have seen of India, which is a great deal.

18167. Can you suggest any reason why persons, who appear to be entirely independent persons capable of forming their own opinions, should come forward and tell us

they consider opium a great evil and that the people would be quite prepared for some stringent or active restrictive measures with regard to opium except for medical purposes?—I can suggest no reason, except that whenever you start a question of this sort you will find somebody to support every view of it. I do not know who supported the views you refer to. I should think a great deal would depend on the intelligence and social standing of the people who expressed them. I should be quite prepared to find there would be people who would say what you mention.

18168. In reference to their social position or intelligence, would you expect the most intelligent to take what I may call an anti-opium view?—I should not be surprised to find some intelligent people take it—some of those who have been brought up with our ideas, because they are apt to draw their ideas not from the feelings of the mass of the people but from what they have read up in our opinions and discussions, and when they have read the subject they form their own opinion on the record of opinions that is before them, rather than by collecting the views of the people.

18169. I have no doubt you are aware that in various public documents, reports, despatches and so on, the use of opium and the opium trade has been spoken of at various times by officials in India in rather strong terms of condemnation and regret—may I ask you whether you share those views?—As I have already said I have never made the subject in any sense a special study, and perhaps my opinion would not be of great value, but so far as I have seen, I have no reason to think that the use of opium leads to great evils in India. I have said it has never forced itself on my notice in my 35 years' service. I dare say there are cases in which it does a great deal of mischief, but I can recollect very few cases in which I have heard it said that anybody was suffering from opium. Of course there may be such cases that I do not hear of.

18170. (*Mr. Mowbray.*) There is one question I should like to ask you in which I think your experience will lead great value to your evidence. It is with reference to the extension of prohibition to the Native States. I understand you have told us that the prohibition of the sale and manufacture of opium in British India would be a most hazardous experiment?—Yes.

18171. Assuming for the moment the British Government and the British people were prepared to try that hazardous experiment, I should like to ask your opinion, as having been the Resident in the largest Native State in India, and being now in political relation with several important Native States in the Punjab, as to whether such prohibition could be extended to the Native States?—I should anticipate very great difficulty about it certainly. I should think we would have to compensate them. Of course we have very great influence over Native States. Many of them would do much to serve us or further our views, but I think it would be a very difficult thing to ask them to do.

18172. May I take it that however hazardous the experiment would be with regard to British India, in your view it would be still more hazardous in regard to the Native States?—I would not say more hazardous, but there would be an additional difficulty if they were included. In the first place we should have to get the Native States to agree to do it, and when they agreed to do it, they would in doing it be met by the same risks that we are met here.

18173. (*Mr. Haridas Veharidas.*) Although nothing is mentioned about alcohol in the order issued to the Commission, I should like to ask you whether in considering the proposal to prohibit opium excepting for medical purposes would you not think it the duty of the Commission to take into consideration that by stopping the use of opium we should cause another greater evil to take its place?—Yes, certainly.

18174. And that evil would perhaps be alcohol?—I should consider alcohol a much greater evil.

18175. Is the use of alcohol spreading?—It is.

18176. Is it expressly prohibited by the Hindu and Mahomedan religions?—I am not aware of its being prohibited by the Hindu religion; you know that better than I do. I believe it is not prohibited to Sikhs if they can be called Hindus, and many Khatris, I believe, do not consider it prohibited. I suppose Brahmins consider it prohibited, but I am ignorant on these subjects.

18177. Alcohol is a great evil?—Yes, to anybody.

18178. Do you think that it would have been better to have had a Commission on alcohol to precede the present Commission?—If I can say so without disrespect, I would rather not have seen a Commission of any sort. I think a Commission on alcohol would not be so open to objection as a Commission on opium.

18179. (*Mr. Fanshawe.*) Do you think that even if Native States would agree to a policy of prohibiting opium, there would be any reasonable hope that they would be able to carry out such a policy so as to effectually prevent the use of opium throughout their States?—Of course the administration of a Native State is never so efficient as ours, and I should think that any official agency they established to prohibit the use or sale of opium would break down much more hopelessly than ours.

18180. (*Sir James Lyall.*) I should like to ask you a question with regard to what Mr. Pease said. If you tried to sell opium at a high price through tradesmen having no interest in pushing the sale, would you not lose in that way the assistance which licensed vendors, as monopolists, now give you?—Undoubtedly.

18181. In your experience is not the assistance and accurate information which the licensed vendors give very valuable to Collectors of revenue?—Yes, they are a great check on smuggling by any one but themselves—they occasionally smuggle themselves.

18182. If you had these salaried salesmen, they would be bound to account to Government for every tola or seer of opium which they sold, and they would be under great temptation, would they not, to smuggle, the price of opium being very high and any smuggled opium which the salaried salesmen could get would be almost clear profit to him?—Yes.

18183. I mean he would be under greater temptation to smuggle than under the present system?—Yes, I am afraid you would have to pay a man honest enough to do that the

The witness withdrew.

Babu ABINASH CHANDRA MAZUMDAR called in and examined.

18188. (*Mr. Wilson.*) Are you President of the Punjab Purity Association, Lahore?—Yes.

18189. And Minister of the Punjab Brahmo Samaj?—Yes.

18190. What is your occupation?—I am a clerk in the Examiner's Office, North-Western Railway.

18191. What special opportunities have you had for observation?—I have been to different towns in the Punjab and Sind, I have mixed amongst the people, and enquired from them in the cause of temperance.

18192. What proportion of their income do habitual consumers spend on opium?—This varies a great deal; the consumer spends from annas 8 to Rs. 8 a month, but besides the cost of the opium there are other costs to be taken into consideration.

18193. What do you refer to?—Opium-consumers have to take, besides the ordinary food, other kinds of food to sustain their health. If they are poor, they cannot afford it for themselves or families, but they have to take it—milk, cream, butter and sweets; while they are taking opium these foods are necessary for them.

18194. In what proportion of cases are injurious results apparent?—In all; in some early, in some late. Those that take good food may show a good physique for some time.

18195. Do people generally consider opium to be preventive against fever?—No.

18196. Do you think it is?—No.

18197. Do you think that it is believed to be useful in malarious districts?—No.

18198. Is it necessary or believed to be necessary to enable people to get through hard work?—No. It is believed by some to be necessary, but in reality, as I understand, it is a stimulant, like whipping a horse.

18199. Is the present system of licenses a good one in regard to restricting the habit, or does it tend to spread the habit?—It is rather inducive than prohibitive.

18200. Has the closing of shops for the consumption of opium on the premises been fully carried out?—Formerly they kept shops for opium-consumers, but those have been closed. People now, however, have clubbed together, and have different shops in different parts of the city. They are regular dens; 10 or 12 persons clubbing together,

salary of a Tahsildar at least—the temptation would be enormous. I hope it is well understood that the idea of official retail vendors did not originate from me. I merely understood Mr. Pease to refer to that, whether rightly or wrongly, I do not know.

*His Honor
Sir Dennis
Fitzpatrick,
K.C.S.I.*

20 Jan. 1894.

18184. Do you think that an attempt to prohibit the use of opium by order of Government would be resented by the soldiers in the native army?—I should think it would be resented by them in the same way as it would be resented by other natives who are given to consuming opium. I have no reason to suppose that they would resent it more than other natives who consume it to a great extent, but their resenting it would be a more serious matter at certain times than that of the other people resenting it.

18185. Towards the end of the war in Afghanistan there was considerable difficulty in recruiting as many Sikhs as we wanted—do you think that the knowledge that they would be prevented from using opium would be an additional difficulty?—I do not quite understand because I presume they would be prohibited from using opium everywhere.

18186. I mean do you think the fact that prohibition was enforced in the regiment would be a hindrance to men enlisting?—If you mean that there would be a special prohibition enforced in the regiment and not out of it, I quite agree.

18187. I mean that in a regiment it could be more rigidly enforced?—Yes, of course it could be more rigidly enforced. The prohibition might operate with greater severity in a regiment where there was more power to support it than it would operate on the population outside.

purchase opium, and they there smoke. Eating is done by each individual separately and secretly.

*Babu
Abinash
Chandra
Mazumdar.*

18201. Have the results of that prohibition been beneficial?—It has not been stopped fully, consequently the results remain almost the same.

18202. Do you consider that the Government orders have been carried out?—They have been carried out as regards the closing of the shops, but as people have access to them in different ways, of course the results remain the same.

18203. Are there any further measures, and, if so what, that are required to give effect to the policy of discountenancing opium-smoking?—My idea is that if the people are simply allowed to smoke at their own residence, and not allowed to smoke anywhere and everywhere, that would be a prohibitive measure.

18204. Do you think it desirable to prohibit the sale of opium except for medical purposes?—Yes.

18205. Would the public opinion of this district be in favour of that?—Not all at once, but gradually people will come round.

18206. Do you think it would cause any rioting or disturbance?—Nothing of the kind.

18207. If some prohibitive measures of that kind were adopted, would it be desirable to make special provision by a register of those who are thoroughly accustomed to the use of opium?—Yes.

18208. Have you any suggestion how that could be done, and what the effect would be?—My idea is that as regards the servants of the Government registers might be kept for them in their offices or where they get their appointments. It must be noted whether they take opium or not at the commencement, and they must produce a medical certificate that it is necessary for them to use opium.

18209. What do you think are the results of opium-eating physically, mentally, and morally?—It is ruinous in all respects. It deteriorates the body, and reduces the consumers to drowsy, sleepy persons. It is also ruinous morally.

18210. Have you any further statement to make on the subject?—I do firmly believe that opium is causing the physical, mental, moral, and spiritual ruin of the people of India. It affects the consumers specially, but its evil effects are also felt by the people at large. I shall attempt to establish my assertions in brief. It must, however, be said that

[* *NOTE.*—The following letter was subsequently received from Sir Dennis Fitzpatrick, dated 13th February 1894:—

On reading the proof of my evidence over it strikes me that I ought to have mentioned in answering some of the questions put to me that in one part of India in which I have served, viz., in the Assam Valley, I have seen a considerable amount of mischief of one particular kind from the use of opium; namely, that owing to opium being very dear there the cost of even a moderate daily allowance of opium was more than an ordinary cultivator could afford, and so many men who might have lived in comfort if they had not been opium-eaters were driven in consequence of their being opium-eaters to live in a very poor way.]

Babu
Abinash
Chandra
Mazumdar.

20 Jan. 1894.

they are not the conclusions of hearsay evidence; but the result of my enquiry and experience of men who are addicted to the use of opium. I know several opium-eaters and opium-smokers. The physique of some of these is a complete wreck, and some of them have died premature deaths. When an opium-eater gets ill no medicines easily work on him. I have been distributing medicines on behalf of the Punjab Purity Association for the last two years. I study homœopathic books and generally distribute these medicines. During the last six months I have seen about 500 patients, and whenever an opium-eater has to be treated I have experienced the greatest difficulty in overcoming the disease. A girl of six or seven years was once brought to me suffering from fever for three or four months and no medicine did her good. On enquiry I found out that her mother gave a little dose of opium every day. First I had to stop her habitual dose and then cured her of her fever. In the Punjab, Khatri mothers generally and others also give a very small quantity of opium to their children from the age of four months to one year in order to lull them to sleep and to enable themselves to perform their household duties unmolested by the cries of the children. When the child learns to take bread the use of opium is gradually discontinued. Girls are more generally drugged than boys who are nursed more carefully than the former in the Punjab. The ayahs and maidservants give opium to babies secretly without the knowledge of their masters to keep them quiet, and thus to keep secure their own services. Some such cases have come to my knowledge. Youths frequenting houses of ill-fame and addicted to immoral habits resort to opium-smoking for lustful purposes. Some such youths have made confessions to me to this effect. Only recently I visited an opium den accompanied by a friend. The very sight was sickening and painful to the extreme. One young man, whose age was only 26 and who said that he was a photographer at Ferozepur and whose father was a Deputy Inspector of Police at that station, was lying there with the *chandu* pipe in his mouth. There were nine men at that time all smoking in a lying-down posture. Their faces indicated misery, poverty, and helplessness. They all told with one voice that bad society and lustful desire (*Ayashi* was the word used by them) created this habit in them and it was now impossible for them to give it up. One said that he would readily give up the habit if only he knew how to do it. There are, I understand, 30 such dens in the City of Lahore, eight of which are situated in Anarkali. I have been collecting these statistics for some time past and have been able to know something of eight of them. Strange to say, one of these dens is owned by a low class Eurasian and his place is known as *Billi Sahib ka Chandu-ghana*. Some women also keep such shops. Two of them have come to my knowledge. The proprietress of one is *Lado* and of the other an old hag who speaks *Bengali* and whose place is frequented by some wretched Bengali youths. It is worth while mentioning here that 20 years ago the Punjabis did not know how to prepare *madak* but now several do smoke it. Those that get good food preserve their health for some time, but at last even the best constitution breaks down. Those that can afford to get food suffer within two or three years of this habit. I have known some office clerks who eat opium and they are found very irritable between the hours of three to five, as the time of their eating opium (*Mohlat*) draws near. They are generally drowsy and less active than the non-eaters. Here, in the Punjab, it is believed that opium, if taken after the age of forty, does good. How far this belief is true I cannot say. I am of opinion that this story has been made current by the opium-eaters themselves; of this I am certain, that they get converts on this plea. It is a strange fact that opium-eaters prescribe this remedy for all diseases and for all complaints. Some take it to ward off cold and cough. Some take it as a preventive of diarrhoea. There are some who do actually take it for these purposes, but there are many who take it ostensibly for some fictitious complaint, but really to enjoy their lustful passions, which seem falling after forty. This will be proved from the fact that many do not content themselves with opium-eating, but have recourse to several doctors; and mostly the quacks and patentees derive their income in that way. During the short experience of two years I had to indignantly turn out of my house some patients who had called on me for medicines for impotency, though sufficiently advanced in years. In a country where there is not much mental activity among the people it is very hard to distinguish the opium-eaters from others, but it must be admitted that opium-eaters are dreamy and drowsy. "*Afimi*" is a common word of reproach for a dazy, slothful, stupid fellow. Opium-smokers (*chandubaz*) are considered worthless people, and are not trusted with any work. Opium-eaters are generally ashamed of their practice. If asked, they always understate the quan-

tity of opium actually taken by them. They are not regarded with much respect, though tolerated. It must however, be added that this toleration by society of opium-eating which has been misrepresented by some as its glorification, is practically due to the secrecy with which the use of this drug is generally attended. Our people have yet to learn the value of a strong and healthy public opinion, the absence of which sometimes allows the wrong-doers to muddle society with their misdeeds with impunity. The toleration in this matter indicates rather the weakness of society than the virtue of the drug which its advocates are at present magnifying. There is not the least doubt that the use of opium deprives a man of his will power, and keeps him in its bondage, from which it is very difficult to extricate him. Opium-smokers are looked upon with mistrust, and are not respected. That which is harmful to the physical, mental, and moral welfare of the people cannot but be harmful to the progress of the spirit; this nobody will gainsay; I will not therefore dilate upon it. Suffice it to say that no religion sanctions it. The Mahomedan religion is against all sorts of intoxicants. The Hindu religion, though silent in the matter, never encourages it. The Brahmos and the Aryas are deadly against it, and so are the Christians.

18211. You have referred to medical matters, are you a medical man?—No.

18212. Do you practise medicine a little?—I have studied, I have asked several people outside Lahore and that is an opinion I have heard.

18213. Are you speaking of the educated classes, or do you include the masses of the people?—Educated classes, generally homœopathic books, and I give homœopathic medicines. That is for charity on behalf of the Purity Association.

18214. When you express an opinion about what people might think of this prohibition, you are referring particularly to the people of Lahore or of the Punjab at large?—Of the people of the Punjab at large and some of the illiterate people also.

18215. (*Mr. Haridas Veharidas*.) What proportion do the educated classes form of the population in the Punjab?—A very insignificant proportion.

18216. Of course your chief experience has been among this insignificant proportion of the community?—I have asked the illiterate people also.

18217. Some of them?—As my opportunities allow.

18218. Do you distinguish between the effects of opium and the effects of alcohol?—There can be no comparison. Alcohol is more dangerous, and the general impression among the people is that a Commission on alcohol should have been the first.

18219. (*Mr. Fanshawe*.) I believe that you are a Bengali?—Yes.

18220. Are you in Government service?—Yes.

18221. You devote yourself largely to the work of the Punjab Purity Association?—Yes.

18222. You have spoken of visiting towns in the Punjab; do you occupy your holidays and Sundays in that way?—Yes. The year before last I had taken a year's furlough and had been to many of these places. Besides that, in my holidays I generally go to some places.

18223. You say that you have visited some important towns; may I take it that you have not made yourself acquainted with the views of the peasantry so much?—I have been to one or two villages, and I cannot say that I can give any opinion about the peasantry.

18224. You have spoken of young men taking to the use of opium for sensual purposes; is that at all common amongst the young men in Lahore?—Not common.

18225. You say you do not know much about the peasantry. You do not, therefore, wish your statement that even older men take opium for the same purposes to be applicable to the Sikh peasantry?—I know very little about the Sikh peasantry.

18226. You say that the people still have access to *chandu* shops in Lahore?—Yes.

18227. Do you mean that *chandu* is still sold in the licensed shops?—What I saw was that they got opium, and I asked them how they prepared *chandu*; they said that they got some of the charcoal of the burnt opium and mixed it with opium and made the best of it.

18228. You seemed to state that *chandu* was still being sold at the licensed shops in Lahore, which would be entirely against Government orders; but I understand you to say that it is not now being sold?—*Chandu* shops have been closed.

18229. There is no sale of *chandu* at the licensed shops now going on?—I do not know that.

18230. How would you propose to stop the meeting of men in private houses for the purpose of smoking?—There may be a list kept of those who are addicted to *chandu*, and by the supervision of the police they may be stopped from meeting for this purpose.

18231. Would you recommend that the police should go into private houses to ascertain what is going on?—Not into private houses. If they are allowed to take it to their residences, they will not smoke it in their families. They do it outside; they take it to the shop, and there they sit and smoke. If people are allowed simply to smoke *chandu* in their own residence, it will eventually come to this, that they will not smoke.

18232. You propose to stop all meeting together for smoking in any place?—Yes.

18233. It would be a private place, would it not, where the smokers would meet together?—It could be easily ascertained where they met.

18234. You would propose to interfere with their meeting in private places?—Yes.

18235. But you are not prepared to say how that could be done?—No, I am not.

18236. (*Chairman.*) What is the number of members of the Punjab Purity Association?—They are not all regular members; we give pledge-cards; we have different sorts of work; we have a temperance branch, and we have a social purity and moral branch; we watch the young men; we

The witness withdrew.

M. DEVI DYAL called in and examined.

18243. (*Mr. Wilson.*) Are you the Editor of the *Kayastha Mitra*?—Yes.

18244. And Proprietor?—Yes.

18245. What is the meaning of the title?—It is "the friend of the Kayastha community caste"—a community numbering 32 lakhs in India.

18246. What opportunities of observation have you had with reference to opium?—Neighbours, friends, acquaintances, and as I have always had a special regard for questions of morality and social reform, I have often talked in friendly way with opium-eaters and smokers.

18247. Is the habit of opium-eating easily relinquished either at once or gradually?—Of course there is a great deal of difficulty in the way of those who want to give it up, or take lesser dose than usual, but when all sorts of temptations are removed from their way, and when they become assured that they cannot get anyhow this drug, then their will-power will predominate, and they will relinquish with difficulty at first, but gradually they will become free from the vice. I have spoken upon this subject with a *Jail Darogha*, and he said that the health of the persons, who were addicted to intoxication, was shattered when they were admitted, but when released they were far better, because they were not allowed their *amal* (drugs), and good food was given, and they had to do physical labour, so they improved in health. I asked one opium-eater whether a person addicted to this vice can give the habit up, and he said, "He can succeed if he wants to do so and determines to do so; he should take a hot cup of milk when he feels the craving, and by-and-by he will relinquish the habit."

18248. The general tendency is to increase the dose?—Yes, except when it is used for medical purposes.

18249. What do you think are the results of opium-eating physically, mentally and morally?—They are bad, degrading, demoralising and ruinous.

18250. Ruinous in what sense?—Ruining their health, body and soul and their professions and everything, and their families suffer a great deal on account of it.

18251. In what proportion of cases do you think injurious results are apparent?—In seven out of ten.

18252. Is opium generally believed to be protective against fever?—No, I have never heard or seen in my life that in fever, instead of quinine or *sharbat-banafsha* (a native medicine) opium is ever prescribed.

18253. Is it necessary, or do people think it necessary, to enable a man to do a hard day's work?—No, on the contrary he is considered hopeless, and the person is thought unfit for work.

induce them; we talk to them; we get their pledges, and their pledges we have by hundreds—temperance and other pledges. There is a membership which includes all these three branches, but they are not very strict.

18237. We have had it clearly from you that, looking at these subjects from a high moral standpoint, which we respect, dealing with these matters in the order of time, and having reference to the state of opinion as matured and developed among your people, you would have begun by imposing restrictions upon alcohol?—Yes.

18238. And would you have taken opium later?—We have not taken up the opium question separately; our pledge-cards say "All sorts of intoxicants," and in some cases we include the smoking of tobacco.

18239. I understood you to say that a Commission on alcohol should have preceded the Commission on opium?—Alcohol is a greater mischief.

18240. (*Mr. Mowbray.*) How many members have you in the Punjab Brahmo Somaj?—We have about 80 members and sympathisers.

18241. In Lahore?—In Lahore.

18242. (*Mr. Wilson.*) Eighty recognised members?—Members and sympathisers. We have two classes: the one out-and-out, people who have given up their caste and have come out of the old Hindu Society; and others who sympathise with our movements, who give us subscriptions and go in our services, but they are not out-and-out. They are not outcastes of their societies. Taking both classes, there are 80. The out-and-out members consist of a dozen families.

18254. Is the habit of taking opium looked upon as disgraceful?—Yes, quite disgraceful. Opium-eating or smoking is socially most degrading. The very word "*Afimi* or *Afimchi*" is full of contempt, and this very word is sufficient to lower down the respect and morality of a person in the sight of other people. The people will hesitate to rely upon the word of an "*Afimchi*." Those who say that opium-eating or smoking is not socially degrading cannot be well acquainted with social manners. In the case of rich men, it is only their wealth that shields them outwardly, and people do not mock them to their faces, but behind their back they remember them with contempt.

18255. Does this term *Afimi* or *Afimchi* relate to persons who take small doses regularly or to persons who are abandoned to the habit and take large quantities?—When a person is taking a large quantity he is recognized from his face as an *Afimchi*. If a person is known to be taking opium, though in small doses, he is looked upon with a little contempt.

18256. Even a small quantity?—Yes, except when he uses it for medicinal purposes.

18257. Do you think that the existing system of granting licenses for the sale of opium tends to spread the habit or to restrict it?—The present system of licensing surely tends to encourage the habit to a certain extent, because everybody thinks that he can easily obtain the drug whenever he requires without giving explanation to any one, nor has he to produce the medical authority or prescription to the licensed vendor; the ignorant people think that there is no evil in it because Government approves it. "If it were an evil, how should Government allow it?" they sometimes plead. I have heard that the license-vendor in villages or less enlightened places now and then threatens the illiterate people that if they will not take the drug he will report the matter to *sarkar* (Government) "because how will I be able to use his own native language *kistarah sarkar ka ghar pura karunga*, i.e., to fill the house of the Government?"

18258. Has the closing of shops for the consumption of opium on the premises been fully carried out?—The measure has not been fully carried out, the opium dens are daily increasing, but the only difference is that the *chandu* and *madak* is prepared on the other side of the premises.

18259. Have the results of the prohibitive measure been beneficial?—No, not of any consequence.

18260. What further measures do you think are required to give effect to the policy of discountenancing smoking?—By express legislation the preparation of *chandu* and *madak* should be made a penal offence.

Babu
Abinash
Chanira
Mazumdar.

20 Jan. 1894.

M. Devi
Lyal.

M. Devi
Dyal.

20 Jan. 1894.

18261. Do you consider it desirable to prohibit the sale of opium except for medical purposes?—Yes, I do.

18262. Do you think that public opinion would justify such a measure?—Of course public opinion would justify it. Those who smoke or consume may simply grumble, but they will afterwards be grateful to Government for this act of kindness.

18263. Are you speaking particularly of the people of Lahore, or do you know the feelings of the Punjab?—I have also travelled in the North-West Provinces; I speak because I have often had the opportunity of mingling with opium-eaters and talking to them in a friendly way. I have had ample opportunities of doing so, and therefore I say that they will really be grateful to Government if this prohibition is issued.

18264. Among what classes are *chandu* and *madak* smoked?—Yes, I know sufficient about that. I lived from my boyhood in Jullundur cantonment, and I can safely say that *chandu-smoking* and *madak-smoking* is much more prevalent in cantonments than the cities. It is generally believed that this plague is brought by Hindustanis (*i.e.*, the people of Lucknow, Delhi, etc.), and it was invented in the time of Wajid Ali Shah, a notorious ruler of Lucknow, of gross immoral character, but this *chandu-smoking* and *madak-smoking* is becoming an epidemic in the cities by leaps and bounds, and I have seen many *Punjabis* who are miserably addicted to this vice. The class who use is generally a poorer class, such as camp followers, menial servants of civil and military officers, police constables, peons, low prostitutes and their dependants. Many high class and respectable men can be seen here and there smoking *chandu* and *madak*, but they began it on account of bad company by frequenting the houses of ill-fame. I know a case of a Brahmin boy (a priest class of Hindus), in my student life: he was once my class fellow. His father openly, without feeling of shame, frequented houses of ill-fame; afterwards his son, once my class fellow, followed the example of his father, and two years ago I found him a confirmed *chandu-smoker* among Mahomedans, and his face was hellish, and moreover he kept a mistress (though he had a wife), a daughter of a sweeper. You can judge from this his real moral condition.

18265. Do you know anything about the Sikhs, and can you tell me what classes consume opium?—Yes, I know a good many things about this question, and I will try my best to remove a great misrepresentation and misunderstanding. When I was in Government service in the Education Department I had to go many times with the Inspector of Schools and Assistant Inspector of Schools on their tour. I have travelled through the Ferozepur, Ludhiana, Jullundur and Hoshiarpur districts (the best districts of the Punjab). I had many opportunities to go in my walks to the fields, and as the Sikhs of every class used to come to see my officer, I had ample opportunity to see their habit and talk freely and friendly with them. The fact is that Sikhs generally use opium after or about 40 years, inheriting the habit of their parents, relatives or neighbours, and usually advised by quacks or unqualified medical men for some sort of disease. But the Sikhs who generally use the opium are zemindars who occasionally go to see their fields and give some directions to their servants, and all day long sit in the verandah of their houses and gossip with visitors and idlers and sometimes go to pay their respect to the District officers and Revenue officers of their sub-division attended by few men and mounted on good horses. The hard work and everyday work of cultivation is done by *Kamas* (or workers), *i.e.*, ploughing, sowing, watering, reaping, in fair and foul weathers. These *Kamas* are almost all very poor; they are too poor to spend a single penny daily for opium, because they are not given monthly wages; they get only grains (their fixed share) when the crop is reaped, and something more on festivities; they hardly possess any cash money. These *Kamas* are generally temperate people, live on very coarse food, but do every kind of hard labour; while their masters (opium-eaters) sit in their houses, drink plenty of milk, eat splendid dishes, but cannot take the trouble of daily visiting their fields. *Kamas* supply and cut fodder for their cattle, and do even their household work. So the declaration of the Government officials that the Sikhs and peasantry of the Punjab are all hale and healthy because they take opium is

untrue in my opinion, because they are unable to do hard work.

18266. Is there any other observation you wish to make?—Nearly six years ago I became acquainted with a Mahomedan physician who practiced the Greek system of medicine. One day I asked him whether he used opium or smoked *chandu*: after a heavy sigh he said: "Not now; but ten years ago I did." I rejoined: "The melancholy effects are still visible upon your face, and your colour is still yellowish." He answered: "It will remain for lifelong as penalty to disgrace me before society." Afterwards he related to me his whole history and early life. I must say that it was dreadful and abominable, and he concluded that all this is the result of cursed opium. I asked him to write his life for the benefit of others, but he said that he would consider it, if opportunity should occur.

18267. Have you had any conversation with rich men who have declared that the habit was a curse to them, and they were sorry they began it?—Yes.

18268. You have told us that rich people who had plenty to eat are not so much injured by the habit as poor people?—No, they are not so much injured. In this respect the difference between the rich and the poor is the difference between bad and worse; the rich are a little better than those who cannot afford to buy rich food.

18269. (Mr. Mowbray.) What is your age?—Nearly 25.

18270. How long were you in Government employ?—Three or four years.

18271. When did you begin?—In 1887.

18272. From 1887 to 1891?—Yes.

18273. How long were you the Editor of the *Koh-i-Nur*?—For a short period, nearly six months.

18274. How long have you been Editor of your present paper?—More than three years.

18275. What is the circulation of the *Kayastha Mitra*?—That being a business matter, I think I am not bound to answer the question.

18276. Certainly not if you do not wish it?—No.

18276A. What was the circulation of the *Koh-i-Nur*?—That belonged to the Managing Department; I was in the Editing Department, and had nothing to do with the other.

18277. You have given us a good deal of evidence as to the opinions of the Sikhs; you are not a Sikh yourself?—I am not, I am a Kayasth: but I have seen much of them.

18278. You have told us that the results of opium consumption are very bad, degrading, demoralizing and ruining, and you said they were ruinous in all cases. I think you were in the room yesterday afternoon when a large number of Sikh witnesses were being examined?—Yes, but I doubt whether they have said what they should.

18279. You heard a considerable number of them state that they had been opium-consumers?—Yes, but I am afraid that their evidence was not independent.

18280. Do you wish this Commission to believe that the men we saw yesterday giving evidence were all ruined by consuming opium?—I cannot say that they are all ruined, because I do not know what quantity they are taking. If they are taking a very moderate quantity and eating plenty of food, they might not have been much injured.

18281. I am not asking about the amount they consume. You saw those men giving evidence, and I ask you whether you will tell this Commission that they are specimens of men who are ruined by the consumption of opium?—People are ruined especially by smoking; these Sikhs never smoke.

18282. Then do you mean that the evidence you have come to give us is that people are only ruined by smoking?—Especially ruined by smoking *madak* and *chandu*. But those who take opium in large quantities are also very bad. As I have said, it is the difference between bad and worse.

18283. (Chairman.) Do you say that the condition of the witnesses about whom you have been questioned was bad?—I did not particularly see their faces and examine them as I was sitting behind.

The witness withdrew.

PANDIT GOPI NATH called in and examined.

Pandit
Gopi Nath.

18284. (Mr. Wilson.) Are you Assistant Manager of the *Akhbar-i-Am*?—Yes.

18285. And of two other news-papers?—Yes.

18286. And are you Secretary of a representative body of orthodox Hindus of Lahore?—Yes.

18287. And Secretary of another body of orthodox Hindus in the Punjab?—Yes.

18288. Have you made a number of extensive tours in various parts of India?—Yes.

18289. And you have had several opportunities of forming an opinion about the people?—Yes, to some extent.

18290. Since this opium question was discussed in Parliament, you have given more special attention to the subject and made enquiries?—Yes.

18291. Is it your opinion that this Commission was the best Commission that could have been sent to India?—No, my opinion is that if a Commission had been sent for the suppression of alcoholic drinks, that would have been much better than the present Commission.

18292. You think that opium is a much less evil than alcohol?—Yes.

18293. But opium is still an evil?—Yes.

18294. Will you tell us generally what you think of the effect of opium-eating as distinguished from opium-smoking?—My impression is that if opium is taken below the age of 40 or 45, the effects are very bad. If opium is taken as a medicine above 40 or 45 years of age, especially for phlegmatic constitutions, it is useful to a very great extent, but only for phlegmatic constitutions. In early age, 20 or 25, if it is taken it is very injurious. It is sometimes taken in youth for very bad, I may say immoral, purposes.

18295. Sensual purposes?—Yes. In early age it is very seldom prescribed as a medicine.

18296. Are the effects of smoking similar to the effects of eating?—No. Smoking is far worse than eating, but it is not generally prevalent in the Punjab. We have few instances in the Punjab; in the North-West Provinces we have many instances of opium-smoking.

18297. In reference to the reasons for taking opium, you have told us that one is on account of lust?—With many youths.

18298. Have you known instances yourself?—I have.

18299. How far do you think it is possible to abandon the habit when it is once commenced?—If the habit is a recent one it can be abandoned easily, but if it is a long-standing habit, the man must in some cases take some other medicine as a substitute, and by-and-by if he desires earnestly to abandon the habit he can do so. He cannot do it at once and very easily.

18300. Is it a fact that persons who are very poor spend a very large proportion of their income on opium?—Those who are rich only spend an infinitesimal amount of their income on opium, but those who are very poor spend a large proportion. If a man drawing Rs. 4 a month spends one anna a day on opium, that will be Rs. 2 a month, or half his pay. Of course to a man who has Rs. 200 a month Rs. 2 will be nothing.

18301. Are some families injured by the spending of this large proportion of the income?—Of course if a man is very poor, earning but little, and he spends much on opium his family also suffers.

18302. Everybody admits that if opium is taken in excess it is very bad; do you consider that when it is taken regularly in what may be called small quantities the habit is injurious?—When it is taken by young men not for good purposes, of course they increase the dose and go on increasing, as they must satisfy their desires; but those who take it as a medicine do not increase the dose. It is only amongst youths when they go on increasing the dose that consequences are the worst.

18303. Do you consider that opium is a protective against fever?—No, I have never found it so.

18304. Is that the general opinion of the people?—I have a large family, and I have known many people attacked by fever, but I have never heard of any doctor or Hakim prescribing opium for fever.

18305. Are you in favour of prohibiting the use of opium except for medical purposes, and perhaps with a provision to meet the case of persons who are habituated to it and who might be injured by giving it up?—With the exception of the word "perhaps" I think it will be useful to prohibit the sale except for medical purposes, and except for those people who are habituated to its use.

18306. What do you think the people at large would say to such a proposal?—Of course those who are in favour of Government and those who wish that this trade should go on, will say that serious discontent will arise among the people, and so on; otherwise almost all families will be very glad if prohibitive measures are enforced. Now-a-days

youths can purchase opium indiscriminately, but in that case they will not be able to do so. The habit among the youths is generally considered by the elders as an unfortunate habit.

18307. Do you think that there is any risk of riots or disturbance if there should be some such prohibitive measures?—I think it is entirely nonsense to say that there can be any fear of riots. I have known many cases far stronger than this. Very recently we have had a religious fair of Hindus scattered and dispersed. We find that even at religious festivals the missionaries go and preach against the very religion of the Hindus and Mahomedans. But I have never seen any riots. It is nonsense to think that because opium is prohibited there will be any riots. India is very loyal, and the people are very tolerant. It is an outrageous blot on the loyalty of India to suggest that they will become riotous for the sake of opium.

18308. Without entering at length into the question of revenue, do you think it would be possible to find the means of doing without this opium revenue, even if England did not pay?—For some time, of course, it must require some aid from England, but by-and-by in some years, when we have other resources and are in a better condition, we shall not require that aid. In the first instance we must do so, because we are poor in India, and do not like any additional tax. English people must help India for some years at least. By-and-by we shall be able to do without the opium revenue, because I think many of the home charges can be reduced, and if the officials will seriously look into the matter of the costly Government of India, I think there are many items which could be very conveniently reduced; I think that may be done in a charitable and generous way.

18309. (Mr. Mowbray.) You have told us that since the discussion in Parliament you have devoted more than usual attention to the consideration of this subject?—Yes.

18310. I suppose I may take it that before the recent discussion in Parliament you had not devoted special consideration to this subject of opium?—Of course a man devotes attention to a subject when it is forced on his attention. If there is any political matter or anything of that kind, when it is discussed, people devote their attention to it. Up to this time I had devoted very little attention to the subject.

18311. Until the subject was brought before you by the discussion in Parliament it had not forced itself upon your attention?—The question of what substitutes there can be for the opium revenue had never forced itself upon my attention; but opium-consuming was an evil among youths, that of course was a subject attracting my attention as it must do of every one else.

18312. What am I to understand by your saying that since the discussion in Parliament you have devoted more than usual attention to the consideration of this subject?—I mean the subject of consuming opium, its effects, and its remedies.

18313. You draw a strong distinction between the use by young men and the more habitual use by elders?—Yes, I would not look upon it as a disgrace if a man nearly 50 years of age took opium for his constitution, but I should look upon it as a disgrace if a young man took opium for immoral purposes.

18314. (Mr. Fanshawe.) What is your caste?—I am a Kashmiri Brahmin.

18315. Have you been long in the Punjab?—I was born in the Punjab.

18316. What is your present age?—I am in my 33rd year.

18317. You have dealt largely with the use of opium for improper purposes by young men—is that at all common, speaking generally?—Young men use opium commonly for this object.

18318. Would that be in towns or in the interior of districts?—Where opium can be had.

18319. You wish that to be generally applied to young men in the districts?—Wherever we have got young men, of immoral habits, and they can get opium, they use it for these purposes; of course, if they cannot get opium at all they cannot use it.

18320. Do you wish us to understand that young men of the peasantry in the districts largely use opium for these purposes?—No, I should not wish to cast a stigma upon all young men—I should not say that all young men take opium for immoral purposes.

18321. When you speak of opium as a medicine after the age of 40, do you wish it to be understood as being used on medical advice?—Generally.

Pandit
Gopi Nath.

20 Jan. 1894.

Pandit
Gopi Nath.
20 Jan. 1894.

18322. Is it not within your experience that there is a large domestic use of opium amongst the people of this part of the country?—Certainly not. We have never any opium in our house; and others that I know never keep it. They may keep other things, but never opium.

18323. Do you think that people in the districts are not in the habit of using opium in the case of chills, colds, pains, and so on, without any recommendation from a doctor?—I cannot say anything about the villages, because I have only occasionally visited the villages. I have not remained there long enough to form an opinion about that.

18324. Then you do not wish to speak of the habits of the villagers?—No, as I have not experience on that subject.

18325. Is it a fact that in Lahore and other places young men are in the habit of taking a great deal of alcohol?—My opinion is that now-a-days when people mix with European company, and have got some English education, they think that alcoholic drink is a sign of civilisation; and when they meet together, they generally become more and more addicted to alcoholic drink. They do it secretly, but the matter comes out after all.

18326. As between alcohol and opium you have already expressed your opinion?—I think alcohol is a far worse evil than opium.

18327. That is what you meant by saying that you would have recommended a Commission on alcohol to be sent out first?—Certainly it would have been much better at the outset had a Commission been appointed to find means for the suppression of the extensive sale of alcoholic drinks in India which is sucking the soul of the people, and is daily spreading, and is being pushed on with remarkable and horrible vigour. The people of India will hail with joy such an attempt by the philanthropic missionaries and the English people.

18328. There are people, even among the witnesses themselves, who consider the object of this Commission to be not very fair?—They think that an indirect attempt is being made to oust opium in order to make room for alcoholic drinks, and it is this that makes them defend the opium traffic, as they are likely to choose the less of the two evils.

18329. (*Chairman.*) You have made it clear to us that you consider it more urgent to deal with alcohol than with opium?—Yes.

18330. You have also made it clear to us that you are in favour of a policy of restriction, except for medical use, for both?—Yes, for medical use, and for those who become habituated to it.

18331. You are in favour of a restrictive policy in regard to stimulants generally, are you not?—Yes.

18332. Is it not the case that you are recommending a

The witness withdrew.

Babu MEGHNATH BANERJI called in and examined.

Babu
Meghnath
Banerji.

18341. (*Mr. Wilson.*) Are you a medical practitioner at Bikanir, Rajputana?—Yes.

18342. And what system do you practise?—The English Allopathic system.

18343. Have you had a regular medical education?—Yes.

18344. Did you take any degree?—I did not take a degree, but I have gone through a full course of medicine at the Medical College here, and I passed the first licentiate medical examination.

18345. What classes, races, or castes have you had experience amongst?—I have had experience of people employed in tea-gardens as coolies. These people generally belong to Chota Nagpur and the district of Bengal. I have had experience amongst the Assamese people and the Rajputs in Rajputana.

18346. How long were you in Assam and Rajputana?—Six years in Assam and more than a year in Rajputana.

18347. What special opportunities for observation have you had?—Having been on the Tengrai Tea Co.'s gardens and the Jaipur Tea Estates in Dibrugarh District, in Upper Assam, employed as medical attendant, I have always seen the coolies both in the lines and out at work; and the tea-gardens being situated near towns and villages. I had frequent opportunities of mixing with the Assamese. Having been in charge of a dispensary in Bikanir State and lived amongst the people in Bikanir, I had opportunities of knowing something about their habits, etc.

18348. How far is opium-eating or drinking prevalent amongst the people you have referred to?—Amongst tea-

policy of restriction which goes far beyond what has been attempted as yet in any great countries in the world?—I know that in England, as far as I have read, opium is not sold except for medical purposes.

18333. You have recommended a policy of restriction for stimulants generally: does not the policy that you have recommended carry us further than any great Government has yet attempted to go?—I have very little experience about other Governments, but in some other Native States of India the area of which is nearly equal to that of some European countries, I should say that for a very long time there has been a restriction like this.

18334. You desire to convey to the Commission that you are ignorant as to the policy with regard to these matters which has been adopted by other countries?—I cannot say that I am quite ignorant, because I know that alcoholic sales are carried on in France and Germany and other places.

18335. So far as you know, is it not the case that you are recommending a policy of restriction for India which goes far beyond what has been attempted in other great countries in the world?—With regard to Europe you might say so, but about India and Asia it is not so. In many Native States in India for a long time alcoholic drinks were strictly prohibited.

18336. I put it to you with regard to other great countries?—In regard to other great countries, I admit that it is a further restriction that I desire.

18337. Do you not think that it is a very serious thing for a foreign Government, for such in a sense is the Government of England, to call upon the Government of India to go further in a policy of restriction than has yet been attempted in any other great countries in the world, unless we could carry the popular approval with us in imposing those restrictions?—It was not considered a serious thing by Government to open liquor shops everywhere against the desire of people. It was more serious to thrust alcoholic drink into villages and places where no shops existed before. It is less serious to stop them now than it was to spread the habit.

18338. You think it is not a serious thing for a Government constituted like that of India?—No, because public opinion will favour Government in suppressing the liquor traffic.

18339. (*Mr. Fanshawe.*) You have spoken of religious fairs being scattered. I understand you to mean the prohibition of holding religious fairs on account of the fear of cholera?—Yes. During the last year there was a very large gathering at Hardwar which was dispersed by Government.

18340. It was on account of the fear of cholera that the fair was dispersed I understand?—Yes.

garden coolies there are few who eat or drink opium, but infants, almost without exception, are given some opium to keep them quiet, as the mothers have in many cases to leave them behind in the lines when going out to work. Amongst the Assamese about 40 per cent. of men and 10 per cent. of women eat opium. Amongst the Rajputs about 50 per cent. eat or drink opium.

18349. Do you mean that 50 per cent. of the whole population of Rajputana eat or drink opium, or do you mean the adult males?—Adult males; women and children I exclude.

18350. What about the opium-smoking?—Amongst the tea-garden coolies about 90 per cent. of men, about 75 per cent. of women, and about 50 per cent. of children smoke opium.

18351. Do you say that half the children smoke opium?—Yes, they smoke it with their parents.

18352. Then about the Assamese people?—About 50 per cent. of men, about 20 per cent. of women, and 30 per cent. of grown-up children smoke opium.

18353. Then as to the Rajputs?—Amongst the Rajputs very few smoke opium. They eat and drink it.

18354. At what age is the habit generally acquired?—The coolies generally begin about 12, sometimes earlier. I have seen little children of 5 and 6 years learning to smoke opium with their mothers. It is nothing uncommon to see at one of the tea-gardens in Assam.

18355. What are the results of the habit of taking opium?—Persons taking opium become emaciated, lose muscular power, and consequently become more or less debilitated; they also become less active, and there is a great perversion of the faculties. These people become confused and not infrequently morally depraved.

18356. Is opium generally believed to be protective against fever?—No.

18357. Was it so considered in the tea-gardens in Assam?—No, as far as I know.

18358. Do people use it in malarious districts, or is it believed to be useful?—No.

18359. I suppose some parts of Assam were very malarious?—Yes. A large portion of Assam is malarious.

18360. Is it necessary, or believed to be necessary, to enable people to do hard work?—No, I do not think so.

18361. Is the habit of taking opium looked upon as disgraceful?—Certainly. The Assamese word for opium is *káni*, and persons taking a large quantity of opium are contemptuously referred to as *Kánia*; so also the words *Afímchis* and *Posti* in Hindustani and *Gulikhor* in Bengali express contempt.

18362. Are these terms applied to persons who take opium in very large quantities and render themselves incapacitated, or are they applied also to persons who take opium in moderation?—These words mean those who take opium; they have their ordinary meaning, but when used in reference to opium consumers, they convey contempt.

18363. What is *Gulikhor*?—Literally it means eating opium. It is meant to apply to smoking opium or *chandú* as they call it in Upper India.

18364. Do you consider it desirable to prohibit the sale of opium in Assam?—Except for medical purposes and for those who have become so confirmed that they cannot be suddenly deprived of it.

18365. Do you think that the people of Assam would be satisfied with that?—Not those who are confirmed opium-eaters, but other people who are not used to take any opium would be satisfied.

18366. You have told us already that 50 per cent. of the men in Assam and a certain proportion of women and children do smoke opium?—Yes.

18367. Will they be satisfied to be deprived of it?—Many of those who use opium are people who have simply learnt the habit from their friends and parents; these people I think will not show any opposition if they are prevented from doing it; but the 40 per cent. of men, mostly old people, will naturally oppose this prohibition.

18368. As regards this part of the country, do you think that the people here will be satisfied to be deprived of it?—Here opium is used mostly by old people, partly as a medicine, and largely by young people for immoral purposes. If it is prohibited, the parents of these young people will surely be thankful to Government and think it a blessing.

18369. Supposing such prohibitory measures were carried, with a system of registration for habitual consumers, do you think that the people would object to be registered?—Some people would be likely to object—those who do not like to confess that they take opium; but these people may get a supply from their medical advisers. There will be no difficulty there. With regard to the common people, they will care very little whether they get it direct from the shops or through the registration offices.

18370. (*Mr. Mowbray.*) You say you have been in the Punjab, but you have not told us what experience you have had in the Punjab?—I have lived in the Punjab. I was five years studying at the college, and besides that I lived for some years in the Punjab.

18371. How many?—Five or six years, when I was a little boy; and on another occasion I had to live in the Punjab for some months.

18372. Since you were going through your medical education in the college you have never lived in the Punjab?—After leaving college I lived here for some months.

18373. But not regularly?—No.

18374. When you have been here for a month or two I suppose you have been in Lahore?—I have been here for the last three or four months before I was here three years ago.

18375. Where do you generally live?—At Bikanir for the last year and a-half.

18376. When did you say you were in Assam?—I left Assam about a year and a-half ago. I was there in 1885 and in 1891.

18377. You were studying in Lahore from 1877 to 1882?—For five years I was in other parts of the country travelling.

18378. Then you were in Assam from 1885 to 1891?—Yes.

18379. And since that in Bikanir?—Yes.

18380. Your figures are very remarkable, and I do not wish to misunderstand them. The tea garden coolies, I understand you to say, come from Chota Nagpur?—Mostly; some from Behar and some from Benares and Rajputana districts.

18381. You have told us that although very few eat or drink, 90 per cent. of the men smoke opium?—Yes.

18382. You have told us that if consumption were prohibited in Assam there would probably be some remonstrance on the part of those who consume opium?—The old people. The coolies and Assamese are different classes.

18383. I am dealing with the coolies, as you say that 90 per cent. of them are opium-smokers. Besides that a few eat and drink?—Very few.

18384. So that nearly the whole of the coolies in Assam are consumers of opium?—Yes.

18385. I understand you to say that there would be an objection on the part of the consumers of opium to a general prohibition?—Not from all these 90 per cent.

18386. Some of these 90 per cent. would object and some would not?—Those who have been confirmed opium-smokers and cannot do without opium would be sure to object. But there are large numbers, about 70 per cent. of these people, who can easily be made to leave off the habit if opium is given only with restriction. As it is, everybody in the tea gardens can have it from the shop.

18387. With regard to the Assamese as distinct from the coolies, it appears that 40 per cent. of the men eat opium, and you say that 50 per cent. of the men smoke opium; that is, 90 per cent. of the men in Assam either eat or smoke opium?—Yes.

18388. Do you not think that it would be a very serious matter to interfere with a custom so widespread as that?—All these people will not object if the thing is going to be prohibited—only a few old people. Of these 40 per cent. not more 10 per cent. will really object.

18389. How can you assure me of that?—I take it as the number of old people who have been habituated to take opium for years.

18390. You have a population of which 90 per cent. are consumers of opium; what evidence can you give me to show that they would not resent interference with so common a habit?—Most of them will admit that they only take it because they have learnt the habit in company with their friends, and they can easily give it up.

18391. I think you recognise that there is a very marked difference between moderate and excessive consumers?—Yes.

18392. (*Mr. Fanshawe.*) So far as your knowledge goes, what are the reasons which lead people in Assam to consume opium?—In Assam the grown-up people are induced to take it for cough, catarrh and dysentery which are common there on account of excessive damp and cold, and then they become addicted to it.

18393. You mean to the opium habit?—Yes.

18394. Are you aware that in Assam of late years there has been a very great reduction in the number of shops for the sale of opium, and a very great increase in the price of opium?—When I was there I saw that some of the shops had been abolished.

18395. So that the consumption of opium amongst the Assamese has been largely restricted of late years?—I cannot say largely, they have been appreciably reduced.

18396. You say nothing about the Punjab people?—I have seen Sikhs and the people of the Punjab.

18397. As regards prohibitive measures you say that it would matter very little to the common people whether their names were registered or not?—Yes.

18398. Do you wish that to apply to Bikanir? Do you mean that the Rajputs would not object to have their names registered?—The higher classes of people might object; the lower Rajputs would not object.

*Babu
Meghnath
Banerji.*

20 Jan. 1894.

RAI MAYA DAS called in and examined.

Rai Maya Das. 18399. (Chairman.) I believe you are Extra Assistant Commissioner of Ferozepur?—Yes.

20 Jan. 1894. 18400. You are a resident of Ferozepur, where your late father was Kardar under the Sikh rule?—Yes.

18401. Your grandfather was a Sikh Khatri?—Yes.

18402. You are a Native Christian, and you hold ancestral landed property in this district?—Yes.

18403. You were born and brought up at Ferozepur?—Yes.

18404. You are 50 years old, and have been in Government employ for the last 21 years as Reader and Tahsildar and Extra Assistant Commissioner in the Lahore and Ferozepur district?—Yes.

18405. What can you tell us as the results of your observation with regard to the use of opium in your district?—I am constantly on the move, and I am in charge of canals in the Ferozepur district. I am also manager of an estate and have to go amongst the villages, where I pass a considerable portion of my life. I find that a considerable portion of the population—both the well-to-do and the peasantry—use opium. It is the peasantry which supplies materials for war, namely, men, and almost all the men amongst the Sikh regiments take opium.

18406. Do the Mahomedan cultivators take opium?—Hardly any.

18407. How do you compare the Sikh cultivators with Mahomedan cultivators with reference to their skill in agriculture?—I can say from personal observation that the Sikh cultivator beats the Mahomedan hollow. Since writing the abstract of my evidence I thought I should like to collect more accurate evidence, and I have made a list of names taken down at random both by myself and friends. It comprises 163 men, mostly Hindus, of various ages, the lowest about 45 and the highest 80. I have shown how long these men have been taking opium. There is one man of 65 who has been taking it for 20 years on account of ill-health, another 80 years of age has been taking it 40 years.

18408. The table can be put in, and our medical colleague will have the opportunity of looking at it; does it support all you have stated?—Yes, I have known men of 50, 60 and 70 years of age, sometimes older, who have used opium for a long time and have kept very good health. I often meet men while travelling in this district, where I remain constantly on the move, and where they have to do a double journey or travel more than usual; they take an extra small dose of opium and call it *piada* (messenger), and do their journey or work cheerfully and with less fatigue and are none the worse next morning.

18409. Will you give your own impression as to the feelings of the people upon this question?—The feeling of the people here is this, that they are surprised to see that Government have taken up such a question. They (the people) generally compare opium and its effects (apparently very beneficial to themselves from long experience) with alcohol and its effects, especially on low Europeans, Eurasians and Natives whom they see ruined by the use of alcohol morally and physically. They are, I say, "surprised," because they talk amongst themselves that while Government winks at what they know and see of alcohol and its evil effects, have still thought of finding fault with

The witness withdrew.

SYAD ALAM SHAH called in and examined.

Syad Alam Shah.

18424. (Mr. Fanshawe.) I believe you are an Honorary Magistrate of Lahore?—Yes.

18425. Are you a land-owner?—Yes.

18426. In what district is your property situated?—My land is situated partly in Amritsar district and partly in Lahore district. My ancestral property and my acquired landed property are in Amritsar district, but on my retirement from service Government granted me a lease of land for some years in this district.

18427. Will you kindly tell me what you know about the use of opium amongst the people of this province?—As far as I know people use it for two purposes. Most people in affluent circumstances when they reach old age use it when attacked by phlegmatic diseases, dyspepsia and cataract. They commence by taking small doses and increase them gradually. As they can afford rich food, their health is generally benefited by the use of opium. As to low class

the moderate and beneficial use of opium in this country as a necessity. They think that if opium was stopped, the result would be that both the cultivating class (the backbone of the country) and that which produce fighting men for the Government army will deteriorate in every way unless they can get opium by smuggling or by any other means.

18410. I think you said that among the Sikh regiments almost every man takes opium?—Yes. When I was travelling here I accidentally met a detachment of a Sikh regiment. There was a native officer who was travelling with me. He was talking to some other person about opium. He was a hale, hearty man, and could carry four men like myself. "All our men," he said, "take opium. We went to Kandahar, we took half a ratti more, and we fought like demons—look at me." I was quite surprised; he could swallow me up.

18411. Is that the ground on which you state that almost all the men in the regiment eat opium?—That is the very expression he used.

18412. That is the ground on which you make your statement?—Yes. I took the man's word for it, that is, what he told me.

18413. Perhaps you are aware that we have had several military officers and men from Sikh regiments who did not agree with your view?—It may be so; I do not know that.

18414. (Mr. Mowbray.) Have you formed any opinion about opium-smoking?—I suppose there is not much. There is very little in Ferozepur; I have not taken special notice of it.

18415. (Mr. Fanshawe.) I understand you to say that this native officer told you that all his men took opium while at Kandahar, that is, while they were on active service?—No; he said they used to take a little opium, a small quantity every day, but that on the day when they had to go for an assault, or to do extra work, or keep up at night, they would take half a ratti more.

18416. Did they take opium in cantonments or while they were at Kandahar?—He said that when they had an extra journey or hard work to do they took a little extra.

18417. Your own experience has been in a district where there are a number of Sikhs—Ferozepur?—Sikhs and Mahomedans.

18418. You have a very large number of Sikhs in the Ferozepur district?—Yes.

18419. And you have had a wide experience of their habits from moving amongst them?—Yes.

18420. Do the peasantry largely take opium in your district?—Yes.

18421. That is within your own knowledge?—The quantity of opium sold proves it.

18422. Is it within your own knowledge that it is taken largely in the Ferozepur district?—Yes.

18423. What is your opinion as to the effects of the opium habit on the Sikh peasantry in that district?—I must confess that with the exception of perhaps a very small percentage of people who have taken more than they ought to, generally speaking, opium has been of great benefit to them.

people, menials, and idle people, such as mirasis, beggars and aged prostitutes. The use of puppy-heads and opium has almost become hereditary among mirasis. Their children contract the habit from their elders. They generally consume the drugs at *takias* kept by fakirs, who also acquire the habit from associating with the mirasis. The prostitutes when aged cannot afford liquor, and consequently take opium or *hang* instead.

18428. What is thought amongst the people of opium-eaters?—An opium-eater, so long as he takes opium medicinally, is not considered disreputable or bad character, as is the case with a drunkard. Its intoxication is considered inoffensive. The consumers generally attend to their business after taking it.

18429. What proportion of the people in the parts of the province with which you are acquainted take opium?—In my opinion the proportion of opium-eaters must be about 20 per cent.

18430. Do you mean 20 per cent. of the adult male population?—I have divided the subject under two heads. One class of persons consists of opium-eaters who contract the habit viciously from bad company; the other take opium for medical purpose by the advice of the doctor or of their own accord. Those who contract it from a bad society may be about 15 per cent., and the others who take opium by medical advice or for medical purposes I consider 5 per cent.—that is, 20 per cent. in all.

18431. What more can you tell us about the feeling of the people with regard to the prohibition of opium except for medical purposes?—I have never heard of a desire among the rural population that Government should prohibit its use authoritatively. Some educated people in Lahore, however, complain that the use of opium is pernicious, and that Government should not derive benefit from such an article but should stop it.

18432. Would the people generally be prepared to pay any tax if this were rendered necessary by the prohibition of opium except for medical purposes?—People in general will not be willing to pay any other tax instead of the present duty on drugs, as they do not consider the prohibition of opium in any way beneficial to them. They will rather consider the prohibition of opium as a hardship.

18433. Are you aware that opium is used as a common practice among the Sikhs?—In Lahore and Amritsar districts I think opium is used as a domestic medicine. I consider that about 40 per cent. of mothers keep it for their infant children, and the heads of families keep a certain quantity to meet emergencies or unforeseen accidents.

18434. I was asking you whether you knew that the Sikhs in particular were in the habit of using opium?—The Sikhs in particular are more in the habit of taking opium than the rest of the population with the exception of one Mahomedan sect among the peasantry, the Mahomedan Rajputs.

18435. In what district are they?—They are also in Lahore and Amritsar districts, but they are not so extensive as the Sikhs.

18436. Will you tell us generally what, in your opinion, has been the effect upon the Sikhs, physically and morally, of their eating opium? Has it caused them harm or not?—I think with regard to those who have taken opium on medical advice, that it has done some good, but to those who have adopted it for vicious purposes or from bad company or immoral inclinations, it has done serious injury.

18437. But speaking generally as regards the Sikhs, do you think that the opium habit has done harm or not?—It has done them good—those who have taken it in advanced age, but it has done harm to those who have taken it in early life.

18438. (Chairman.) You have put us upon the horns of a dilemma; you invite us to choose between a mild democracy and an enlightened despotism. You say that it is quite clear that people would not like to pay an increased tax to compensate for the loss of revenue on opium—that point is clear?—Yes.

18439. (Mr. Wilson.) Have you anything to say in reference to the use of opium by the Mahomedans?—The

Mahomedans use it as well as the Hindus. The difference that has come under my personal observation is this, that the Mahomedans are generally the lower and the poorer classes, especially beggars, prostitutes and so forth. Among the Sikhs there are higher classes that take it.

Syad Alam
Shah.

20 Jan. 1894.

18440. I think it is your opinion that the opium-eater, while he takes opium medicinally, is not considered a disreputable or bad character?—Yes.

18441. But if he takes it for other purposes, it is bad?—If he does not take it medicinally it is bad.

18442. Are the people very fond of cultivating poppy?—So far as I know, the people are fond of cultivating the poppy. It was so in the time of the late Government, but since the annexation they have given up cultivation of the poppy. If the cultivators take opium themselves, or their relations take it, they will cultivate it, but not upon any extensive scale. The masses of the cultivators generally abstain from cultivating it.

18443. Why do they abstain?—Because they do not like the restriction.

18444. What restriction?—If a cultivator cultivates poppy he has to pay an extra acreage; then he has to give information to the patwari, and he has to show his produce and to have it entered on the back of his license; then he can sell only to a contractor, and he cannot use it himself; if he uses, he can criminally be prosecuted and convicted.

18445. We have been told that they are fond of cultivating the poppy, but that is not your opinion?—They are fond of cultivating poppy, but they do not cultivate it only for these restrictions.

18446. Under present restrictions?—That is so.

18447. Are the cultivators of poppy looked upon with any disfavour by other people?—Not at all.

18448. Your impression is that if it were not for Government restriction, a great many more people would grow poppy?—Of course.

18449. (Mr. Mowbray.) You told us that an opium-eater so long as he takes opium medicinally is not considered disreputable, will you explain what you mean by medicinally—do you mean the case of a man who takes it by the prescription of a doctor?—I mean that anybody who takes opium to relieve his bodily ailments is not looked down upon, but if he mixes with bad company and begins to take opium, whether eating or drinking, he is considered to be a sort of loose character.

18450. If a man about the age of 40 begins to take opium, because he feels himself failing, without any order from the doctor, is that what you call the medicinal use of opium?—This is generally what I say, but if he contracts any ailment at an earlier age and takes opium for that ailment he is not looked down upon. If, without any bodily injury or ailment, he viciously, and from the influence of ill company, begins to contract the habit, he is looked down upon.

18451. The man who takes it as a medicine for himself without any order from the doctor is not regarded as in any way disreputable?—The masses of the people in this country—I do not mean in the cities—may not see a doctor for years.

18452. I suppose that doctors are not very common in the country districts?—No.

The witness withdrew.

Adjourned to Monday at 11 o'clock.

At the Town Hall, Lahore.

FIFTY-SECOND DAY.

Monday, 22nd January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWERAY, M.P.
" A. U. FANSHAW.

MR. ARTHUR PEASE.
" HARIDAS VE HARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWITT, C.I.E., Secretary.

MR. T. GORDON WALKER called in and examined.

18453. (Chairman.) You have put in a valuable and exhaustive memorandum for the consideration of this Com-

mission dealing with the system of excise on opium in force in the Punjab, and it is unnecessary that I should assure you

Mr. T.
Gordon
Walker.

22 Jan. 1894.

Mr. T.
Gordon
Walker.

that that memorandum will receive very careful consideration. I understand you are here to-day to offer some supplementary information?—Yes.

22 Jan. 1894.

18454. May I ask you to tell us what your service has been in India?—I have been 21 years in the Indian Civil Service (all the time in the Punjab), out of which five years have been spent in my present appointment. Of the remainder I served 11 or 12 years as an Assistant Commissioner in a district, or in charge of an outpost, and in the Revenue Settlement Department. The portion of my service during which I have been brought into closest contact with the natives of the country was the period (six or seven years) of my employment as Settlement Officer of the Ludhiana District. During this period my duties brought me into daily contact with the people of that district, and I also saw a great deal of the people of Ferozepore and the adjoining Native States (Patiala, Jind and Nabha). I may add that the Ludhiana District stands second in the Province with regard to opium consumption, both average and total, and is therefore of special importance.

18455. We shall be prepared to receive any information you can give us which will show us, on the one hand, how far the populations amongst whom you have had experience are consumers of opium, and, on the other hand, what are the characteristics, both moral and physical, of the agricultural labourers. We shall be glad if you will show us the effect of opium habit on the people among whom you have lived?—The agricultural population of this country is almost entirely made up of *Malwa Jats*. These people are as a whole, not only of a better physique than probably any race in India, but they are also full of energy and enterprise. Unlike most natives, they are always ready to leave their homes in search of a living, and are to be met with in the most distant parts. Some of the finest regiments of our Native Army are almost entirely recruited from them, and such of them as do not take service usually find an outlet for their energy in the way of petty trade all over the country. As a rule they are very thrifty, and consequently well-to-do. Unlike the agricultural population of many other parts of the Province they are to a very limited extent, if at all, in the hands of the money-lending classes. It is a disputed point whether the Malwa Jat is superior in powers of endurance to the Jat of the Manjha tract (in which term is comprised roughly the districts of Gurdaspur, Amritsar, Lahore); and military officers would probably give the preference some to one and some to the other. The Khalsa Army of the Sikhs against which we fought, in some cases with doubtful results, at Mudki, Aliwal, Sabraon in 1845 and afterwards at Chillianwalla and Gujrat, was composed almost entirely of Manjha Jats. Since annexation both Malwa and Manjha Jats have fought on our side through the Mutiny, and they have been represented in almost every campaign and expedition which we have since undertaken in Asia. The districts containing the agricultural population from which the Manjha and Malwa Jats in our Native Army are recruited have a far higher proportion of opium-eaters than any others, as will be seen from the figures given in paragraphs 20 and 21 of my memorandum. The five districts which I have specially mentioned in the preceding paragraphs head the list both as regards total and average consumption of the drug; and these Jats have been accustomed to the use of opium certainly for generations. They do not, I believe, as a rule take to it till they are well advanced in life (the age of 40 is generally supposed to be the limit); and the proportion of consumers in a regiment would not necessarily be a fair test of the extent to which the opium habit prevails amongst the classes from whom the recruits are drawn. What strikes me most on looking back to my experience as Settlement Officer in the Ludhiana District and as Assistant Commissioner in charge of the Kasur Sub-division of the Lahore District, is that there were nowhere any visible effects, good or bad, of the use of opium. The matter in no way forced itself upon one's notice as it would undoubtedly have done if the practice had any bad effects on the physical or mental condition of the people.

18456. How would you compare the use of opium with the alcohol habit at home?—With a large proportion of the population the consumption of opium is part of their daily life, just as with the Englishman of the lower classes his daily allowance of beer is. At home people are accustomed to the existence of the practice of drinking beer and spirits. The practice of consuming opium is something quite foreign to the English national feeling, and is therefore suspected. If we want to see how the question as between drink and opium presents itself to the native population of this country, we must begin at the other end. To the ordinary native mind the practice of eating opium is far less reprehensible (in moderation it is not regarded as reprehensible

at all) than that of drinking spirits. As regards moderation and excess, I may put the matter thus. The Englishman who drinks a pint of claret or a glass of spirit daily may be said to drink claret or spirits, but he is certainly not a drunkard. In India if a man consumes up to ten or twelve grains of opium daily he is said to eat opium, but he is in popular estimation just as respectable a member of society as a person who does not. It is only if he shows outward signs of having passed a certain limit, and of giving way to undue indulgence in opium that the epithets of "*Afimi*" or "*Amis*" (corresponding to our drunkard) would be applied to him. Whereas in this country to say that a man eats opium conveys no idea of moral reprobation, to say of a man that he drinks spirits would to some extent convey the idea that he was not a reliable member of society.

18457. Have you anything to tell us with reference to your observation on the use of opium in marshy or malarious tracts?—Only this. It has come to my knowledge that opium is often used in moderation to counteract the bad effects of the climate in marshy or malarious tracts. Thus in the Ludhiana Bet or lowlands of the Sutlej I found that the inhabitants, mostly Mahomedans, who would not under ordinary circumstances consume, but are exposed during some months of the year to severe cold and damp, in consequence of this take opium to keep away the effects. Quite recently in marching through Rohtak I found that the extension of canal irrigation had led to the use of opium for the purpose of counteracting the various ailments which had followed the change from a dry to a damp climate.

18458. (*Mr. Wilson.*) Does canal irrigation practically change a dry climate to what you would call a damp one?—Yes; when canal irrigation is carried to excess it certainly does to a very great extent; and even in moderation, when the rainfall is slight, canal irrigation does increase the humidity.

18459. It produces a distinctly appreciable effect on the climate?—Distinctly more or less appreciably according to the extent of surface covered by the water.

18460. Are you aware that we have had during the last few days, in this room, a good deal of evidence of persons who approved the use of opium in small doses in persons of somewhat advanced age, and who regarded its use as reprehensible in the case of younger persons?—I should make that distinction.

18461. You qualify your own statement that "to the ordinary native mind the practice of eating opium is far less reprehensible (in moderation it is not regarded as reprehensible at all) than that of drinking spirits" to that extent?—Yes.

18462. In men over 40?—Yes.

18463. (*Mr. Mowbray.*) Is there any way in which the price that is paid by the licensed vendors of opium to the opium cultivators is regulated by Government; or is it a matter entirely between the cultivators and the opium vendors?—In the case of the home produce supply there is nothing. It is left to be decided between the growers and the licensed vendors.

18464. You said that the existing opium rules which came into force in 1889 distinctly forbade the consumption by a grower of his produce, and makes such consumption expressly an offence: is that a thing which you practically enforce, and is there any difficulty in enforcing it?—There has been a very great deal of difficulty and discontent caused in enforcing that, because the persons against whom it was enforced are those very people of whom I speak in my personal evidence—the agricultural population of Jats.

18465. The interference of the Government, so far as it has gone, does cause some discontent?—It has caused a very considerable amount of discontent.

18466. And would you be of opinion that further restrictions would cause further discontent?—I should say it would increase the body of discontent very considerably.

18467. (*Mr. Fanshawe.*) We have been told that many Sikhs begin the opium habit at the age of 35 to 40, and I understood that you agreed with that?—I do.

18468. Can you express an opinion as to the age in England with which the age of 35 to 40 among the Sikhs would compare?—I should say that there was practically no difference in the matter of longevity between people at home and this agricultural population in the uplands, composed of Jats. As far as my observation goes, I should not say there was any distinction. An agriculturist of 35 in the healthy tracts of the uplands is quite equal to a man of the same age at home.

18469. I find it stated in the Census Report of 1891 for the Punjab that the Sikhs are peculiarly long lived as compared with other inhabitants of this Province: is that within your own experience at Ludhiana?—That is certainly within my own experience. I have not examined the figures for the purpose of testing it.

18470. Speaking from your general experience, you would think this was correct?—Certainly.

18471. (*Sir William Roberts.*) I think you say that the consumption of opium amongst the Sikhs of 35 to 40 and over is much more common than amongst the younger men in the regiment?—Certainly. I should say that if you were to take a census of the men over 40 or 50 you would find the higher you went the greater the number of consumers.

18472. What proportion of the people of middle-aged, or past, do you think would be opium-consumers amongst the Sikhs?—I am afraid I could not say.

18473. Would you say half of them were?—Quite half.

18474. Of male adults?—Of the male adults over 40 certainly more than half. That is my impression. I have no actual statistics to go on.

18475. Do you know the quantities that they usually get to?—I have made no personal enquiries on the subject, but I have heard it said that a man of advanced age who consumed one *masha*, that is 8 *ratties*,—about 15 grains—was not taking it to excess.

The witness withdrew.

SURGEON-MAJOR S. H. BROWNE, M. D., called in and examined.

18480. (*Sir William Roberts.*) You are, I think, Principal of the Lahore Medical College?—Yes.

18481. What opportunities have you had of studying the effect of the consumption of opium in India?—The principal opportunities I have had have been whilst I was a Civil Surgeon in the Central Provinces. I was 9 years a Civil Surgeon there, and I had charge during that period of six different Jails and of a Lunatic Asylum, in which I had many opportunities of seeing the effects of opium and its effects when taken in excess. I have also had opportunities during the term of my service in Lahore in the Mayo Hospital, of seeing opium-eaters suffering from other diseases. Although I never at any time made a special study of the effects of opium I have had opportunities of making a considerable number of *post mortem* examinations on the bodies of opium-eaters.

18482. Have you observed any organic disease produced by the use of opium?—I have never found any which I could attribute to opium.

18483. Have you made any *post mortem* examinations of opium-eaters?—A considerable number.

18484. Of those who had even used it to an injurious extent?—Yes.

18485. Have you had an opportunity of observing cases of the use of opium to an injurious effect?—I have had a very considerable number of cases, especially in Jails.

18486. What symptoms or conditions could you trace to the direct effects of opium?—Dyspepsia and diarrhoea.

18487. Are you speaking of what occurs when the opium is stopped?—After it is stopped.

18488. How would you describe the effect of opium used in excess to an injurious extent?—I cannot say I have any personal evidence of that. I speak of the drug being stopped after admittance to Jail.

18489. The direct effects of the opium habit have not fallen under your notice?—No.

18490. Only when the opium was stopped?—Yes.

18491. In the case of prisoners entering Jail?—Yes.

18492. What did you observe?—They suffered very much from dyspepsia and from an intractable form of diarrhoea.

18493. You say you have had *post mortem*s?—Yes.

18494. Would they be *post mortem* on opium-eaters who had died from other ailments?—Very often opium-eaters, who died from this diarrhoea, and in those bodies I cannot recall a single instance where I found the organs healthy, where there was not any serious degeneration of all the principal organs of the body, especially the liver and kidneys.

18476. That it was not an injurious amount would of course depend upon the idiosyncrasy of the individual?—Entirely.

18477. (*Mr. Mowbray.*) I should like to ask you one other question on your memorandum. From your remarks on the licensing system, it would seem that there were two systems, the auction system and the farming system?—They are both auction systems, because the farm is auctioned. In the one case it is a monopoly of a single shop covering a very small area, and in the other case it is a monopoly of a whole district or a group of shops. But the method of disposing of both is the same under both systems.

18478. Do you think that the system of disposing of the licenses by auction tends to give too great an inducement to the licensed holder to push his business?—Certainly not. The tendency, I should say, was the other way, because if you create a monopoly of any article, I take it as an established fact you enhance the price, and thereby discourage consumption. That is a general fact applicable not only to opium but any article. In the case of opium we know that the more efficient the monopoly is the more command the monopolist has over the market. He pays Government for that right, and he charges a higher price. That in itself I take it would discourage consumption.

18479. It has been suggested that the high fees which the licensed vendors are compelled to pay by this auction system drive them into pushing the trade beyond what they would otherwise do?—My experience in the Punjab is that it drives them to charging a higher price and therefore selling less.

18495. You mean such organic changes that you are quite sure would not be produced by opium?—Quite sure.

18496. But produced in the ordinary way by other diseases?—Yes; by malaria for instance.

18497. I presume that the use of opium is always stopped when opium-eating prisoners come into Jail?—In the great majority of cases. In a few cases it was quite common to continue a small supply of opium.

18498. For what time?—For a few weeks after admission.

18499. Any effects that you noticed from stopping the opium were not very alarming?—Except this form of diarrhoea. I look upon this intractable form of diarrhoea as one of the results of stopping opium.

18500. Have you ever seen any of these cases end fatally?—Many of them.

18501. In those cases you say you found organic changes of another character?—Yes: they were not originally healthy men.

18502. What were the changes attributable to?—Cirrhosis of the liver very frequently—lung disease, tubercle, and often chronic degeneration of the kidneys.

18503. Have you been in charge of Dispensaries?—Yes.

18504. Have you noticed in the districts where you worked whether there was a common household use of opium?—Yes.

18505. As against malarial conditions?—I cannot say I am absolutely certain on that point. I have an impression that it is used. I have often myself prescribed one of the alkaloids of opium for malarial fever, namely, narcotine, and presume from the good results obtained from the effect of narcotine that opium has in itself a certain anti-malarial effect.

18506. For how long have you been in the habit of prescribing narcotine?—Since I have been in the service. I first saw it used in Calcutta in 1874.

18507. Since 1874 you have been aware of the effects of narcotine?—I think it was first described by Sir William O'Shaughnessy in Calcutta.

18508. Have you known of any popular idea amongst the people with whom you came in contact that opium had a beneficial effect in regard to malarial fever?—I cannot say I have absolute knowledge of that.

18509. I suppose you do not know from your own knowledge whether opium is to be found in almost every house, and used as a domestic remedy?—I cannot say that from my own knowledge.

Mr. T.
Gordon
Walker.

22 Jan. 1891.

Surgeon-Maj.
S. H.
Browne,
M. D.

Surgn.-Maj. S. H. Broome, M.D. 18510. In the case of a man who was in the habit of using opium, could you use opium on the top of the habit?—Yes, only it must be given in much larger doses.

18511. Otherwise you find the effects the same?—Yes.

18512. (*Mr. Haridas Veñaridas.*) I understood you to say that in the case of opium-eating prisoners admitted into jail, and opium is stopped, the evil and disastrous conse-

quences would be on account of disorders from other diseases?—In my experience these cases have occurred in persons who were not healthy, who were suffering from chronic diseases of other kinds unconnected with opium.

18513. It would follow from that that if opium is not stopped and the prisoner is allowed to continue his dose, those other diseases would prove fatal to him?—Eventually, but probably not so quickly.

The witness withdrew.

Mr. H. E. M. JAMES called in and examined.

18514. (*Chairman.*) You are Commissioner in Sind?—Yes. 18515. I believe you have had, what is somewhat rare among officers in the service of the Government of India, some experience in China?—Yes.

18516. Would you give us any particulars which bear upon the question before this Commission?—In 1886, when I had completed twenty years' service in India, I set out for a journey in China with Captain Younghusband. We visited Canton, Shanghai, Tientsin, Chefoo, Peking, and Newchwang, and then spent nine months in the interior of the Province of Manchuria. After leaving Moukden, the capital, the only Europeans we met in the interior of Manchuria were 3 or 4 French missionaries. My connection with the Indian Government naturally led me to obtain all information I could regarding opium. I first noticed the drug being used by passengers on board the steamer going to Canton, where, perhaps, 5 per cent. of the first class Chinese passengers lay down and smoked it. I remember looking with curiosity to see if any fell into a lethargic state, but none seemed any the worse. Then afterwards, when travelling in the interior of the country, putting up in farm-houses and inns, calling on bankers and tradesmen, I observed opium frequently being smoked, mostly by the well-to-do classes, but also by strong well-to-do cultivators and soldiers, with no ill results whatever, so far as I could see. In the interior of Manchuria we came on poppy fields from which the opium was being gathered.

18517. To what extent did you observe that the drug was used?—The drug was used in moderation with harmless results, and the physique of the men who used it was not affected. On the seat in a banker's parlour the pipe and materials for smoking would be generally seen lying ready, and they were sometimes offered us as a polite matter of form. Half the pleasure of the smoker seemed to lie in the tedious preparation of the opium to be smoked, just as some men roll and unroll a cigarette. When the smoking actually began, after a few whiffs the smoker would put up his pipe and lamp and do something else. Men often smoked after their dinner, at the conclusion of a hard day's journey before going to bed.

18518. Did you observe any instances of excessive consumption?—At this moment I can only recollect two sufferers from excess. One was a commercial traveller who smoked all night and part of the day. He was very emaciated and ate scarcely anything. I concluded, whether correctly or not I cannot say, that this was the result of over-smoking. I was also, I think, once shown a dirty beggar, nearly naked, by a French missionary, and was told that he had sold everything to get opium.

18519. Has your attention been called to the evidence given by missionaries before this Commission in London?—Yes. I have read the evidence given by some of the missionaries in China before the Commission, and from my own observations I should say that their testimony as to the moral and physical demoralisation due to the drug was considerably exaggerated. I conversed with many missionaries on the subject. The French missionaries had no particular objection to opium. The Scotch Presbyterians thought it very harmful and tried to induce their converts to give it up. One of them showed me the opium pipe of his elders, an old man who had given up smoking, and the missionary kept the pipe as a trophy. I mention this to show that it is not impossible to break off the habit as is sometimes alleged, though it may be more difficult than to break off tobacco.

18520. Can you cite any cause for the increase in the smoking of opium in China: do you think that the habit has increased in late years?—I believe it is a fact that opium-smoking has increased in China, but I attribute it to the peace and prosperity which have reigned in China since the Taeping War. Just as labouring men in England with increased wages drink more ardent spirits, so the Chinaman indulges in more opium. Of course excessive

drinking and opium-smoking have their attendant evils, but you cannot eat your cake and have it. It would be a physical impossibility to deprive a nation of grown men of a luxury that they like, because some abuse it, and nothing you could do in India would reduce opium-smoking in China.

18521. To what extent do you suppose that Indian opium is consumed in Manchuria—the part in which your travel led?—Very little Indian opium is now smoked in Manchuria. From figures that I obtained from the Consul at Newchwang, I found that the imports had fallen from £572,000 in 1861 to only £23,600 in 1885, though the population of the province had nearly doubled or trebled in the interval, and the native grown opium was dearer than Indian, being 15½ taels as against 15, for 50 ozs. and the Indian opium yielded 45 ozs. of prepared opium as against 30. The principal reason assigned for the disuse of the cheaper Indian drug, was that the ash of the native opium can be smoked over and over again, which is not the case with Indian opium. And so smokers who cannot afford the pure drug, buy the ash, which is said to be much more deleterious than the pure article. It follows that the native drug has worse effects than the Indian. The Indian drug is now only used in Manchuria to mix with the home-made drug, and give a flavour to it.

18522. To what extent is the cultivation of opium permitted or recognised by the officials of the Chinese Government?—Theoretically I believe it is not recognised; practically the growth of poppy and the manufacture of opium are winked at, if not openly allowed by the Chinese officials in Manchuria, and I was told that the Mandarins made very large profits out of it. Manchuria-grown opium is so popular that it is exported largely to provinces south of the Great Wall. I also learnt a great deal from the British Consuls and merchants at the ports. In Manchuria there was not the slightest concealment about the smoking of opium, and the public in general seemed to have no more feeling about it than we have against tobacco-smoking. Owing to opium-smoking being nominally illegal and to the drug being an intoxicant, the missionaries told me that some of the best Chinese looked on it with disfavour and contempt. I met, however, one very high mandarin who smoked, and I heard of one English Consul who did so. The mandarins might perhaps draw the line at smoking opium in a *yamen* or public office, but that would be all. I may mention that we caught a lad who was one of our servants being taught to smoke by one of our cartmen, a fine burly fellow, and we stopped it. We did this just on the same grounds that you would forbid a youth of 16 at home frequenting the tap of a public-house and drinking grog.

18523. What is the attitude of the officials of the Chinese Government towards the opium trade in India?—Personally, of course, I have no knowledge of my own, but from the Consuls whom I met and, from members of the Chinese Customs Service, I gathered generally that there was now no feeling against the English in connection with opium, though some of the old conservatives might hold it as a pious opinion. The Chinese officials now only desire to make as much revenue as they can out of it.

18524. Have you anything to say to us with reference to what has been alleged, that our wars of former days with China were essentially opium wars?—Yes. When writing an account of my travels, in which was included an historical sketch of the Manchu dynasty, I read up all the contemporary literature I could find in the British Museum as to the origin of the first Chinese war. I learnt that although their destruction of opium was the immediate cause of the war, still that was only the crowning of the indignities and insults that for years had been heaped upon foreigners. Our English merchants were kept prisoners in a confined place at Canton, and only allowed to walk out occasionally for health under strict rules, like school boys. Opium or no opium, oppressive treatment

Mr.
H. E. M.
James.

22 Jan. 1894.

of this kind, coupled with continual insults, must have ended in war, so the missionaries of the time agreed. When Lord Napier was sent as Superintendent of Trade to Canton in 1834, he was called by a very offensive epithet, and the Chinese refused to recognise him. This was only a specimen of their behaviour some years before the war.

18525. Have you seen anything of the consumption of opium in Sind?—Yes; a certain proportion of the population eat it, and I have visited smoking shops in Karachi and other places. They are now closed, but smoking continues, and only the other day the Police made a raid on an unlicensed house. Two classes of smokers were met with: the first were lascars and respectable mechanics who do not suffer from it, along with a certain number of idle, good-for-nothing fellows. Opium-smoking in Western India is almost an exotic. But in Guzerat, where the people eat the drug or drink it in the form of *kasumba* the evils of excess are seldom noticeable. Rajahs and hangers-on at Native Courts used to be the worst sufferers from excess of *kasumba*, but even that fashion, I imagine, is passing away.

18526. Have you any figures which you can give us to show the extent of the consumption of opium in Sind?—The population of Sind has grown from 2,413,823 in 1881 to 2,871,774 in 1891, an increase of 19 per cent. The consumption of liquor from 134,493 gallons in 1885 to 152,616 in 1892, an increase of 13 per cent. The consumption of opium from 15,587 lb. in 1886-87 to 18,468 lb. in 1892-93, an increase of 18 per cent. The annual consumption of the drug in the wild tract of Thar and Parkar, where the drug is most in request, is 84.9 (Indian) grains per head or less than $\frac{1}{2}$ a tola. In the rest of Sind it is only 41.9 grains or $\frac{1}{4}$ of a tola per head.

18527. (*Mr. Mowbray*.) With regard to these raids made by the Police on the unlicensed smoking shops in Karachi, could you tell me what the exact offence charged against these people was?—The technical offence for which they were punished was for having more than 10 tolas of prepared opium without a license.

18528. And of that they were convicted?—Yes, and sent to jail for 6 months.

18529. Is that the limit now, or has that limit been reduced?—The amount was 10 tolas, but now it is 2 tolas except in the district of Thar and Parkar, where 10 tolas still exists.

18530. Were these prosecutions since the reduction of the quantity to 2 tolas?—Yes.

18531. That reduction of the amount which any person may legally possess is of assistance to you in dealing with these unlicensed smoking places?—Certainly, it enables one at any moment to make a raid upon these smoking dens and to convict the keeper of them, because it is perfectly certain he will have more than 2 tolas of opium for the supply of his consumers.

18532. Have you any other suggestion to make with regard to any possible means of dealing with these unlicensed smoking places?—Personally I have always been very strongly of opinion that these places ought to be licensed, so that they can be under the control of the police, and any bad characters who frequent them are thus known, and the practice of smoking opium is followed in the light of day, so to speak. At present these people collect together in a secret hole and corner-way to exercise the habit, and it gives the police a great deal of extra work, and it may lead to bad characters assembling and plotting crimes.

18533. In your opinion you would have preferred that these smoking places should have remained licensed?—Distinctly so.

18534. The Government of India having taken action in the other direction, have you anything to suggest in order to make the prohibition of smoking in unlicensed premises more effective?—Nothing except perpetual harrying by the police.

18535. (*Mr. Haridas Voharidas*.) May I draw your attention to your letter No. 899, dated 28th February 1891, paragraph 5?—Yes, I have read it.

18536. In that letter you say:—"Opium-smoking in India is not, as in 99 cases out of 100 in China, a harmless habit, like cigar-smoking amongst Europeans. In India it is a degrading vice, the mark of a debauchee, and 99 out of 100 who practice it are degraded and worthless, perhaps criminal persons:" are you of the same opinion still?—That is put, perhaps, rather more broadly than one might put it in the witness box. In the main it is my absolute belief that the

greater portion of the persons who smoke opium in India are ne'er-do-wells. But as I said in my letter, in the Ports, a certain number of men from the docks and in the great mechanical works of Karachi do smoke it, and without harm.

18537. But you say again:—"As a rule an opium-smoking native of India, of whatever rank of life he be, is vicious and without any sense of self-respect?"—I should say on the whole that was the case. There is a distinct difference as a rule between opium-smoking in China and in India.

18538. We know gambling is against the law, and that the police sometimes harass people if they assemble for that purpose: if we deal with opium-smoking in the same way as gambling, and treat it as a criminal habit and vice, what would you say to that?—In the first place there is a good deal of difference. Gambling never has been recognised, and opium-smoking has been. Gambling has nothing to do with a man's personal appetite. Opium-smoking is more like the consumption of gin, something foreign to the people. It is a vice brought in from outside—a thing that the people themselves feel to be objectionable.

18539. One touches the pocket and the other touches the body and character?—Possibly that is one difference.

18540. You would not put it on the same level with gambling. I mean to say so far as it is an evil?—No, I should not.

18541. Then you would regard it, rather, as generally considered disreputable?—Yes; opium-smoking is disreputable in India.

18542. (*Mr. Fanshawe*.) I understand that you draw a very marked distinction between the habit of smoking as practised in India and the habit as practised in China?—Very considerably. In China people smoke it individually, as you would smoke a Havanna cigar. In India, so far as my observation extends, they smoke in dens, and individuals do not smoke in their houses now, less since the abolition of the Chandul houses. I think there is a distinction between the two.

18543. Do you found the strong opinion you express as to the evil of opium-smoking, as practised in India, on any belief or knowledge that it is actually injurious to the health?—No, I cannot say that. That is rather more for a doctor to speak to than myself. My experience as a Magistrate leads me to consider that opium-smoking in India in shops tends to restrict the habit. Such respectable people as there are in Karachi who smoke assemble together to do so.

18544. Then one of your objections to smoking in India would be that it leads to what I may call gregariousness in vice, whereas in China it is more of an individual habit?—Exactly so.

18545. You mention a larger limit of possession of opium—which I see is also mentioned in the papers before us—as being allowed in Thar and Parkar, 10 tolas: what is the reason of that?—The reason for that is that it is on the confines of Jeyssalmir and Jodhpur, Native States in which opium is produced, and any overstrictness in that part would infallibly lead to smuggling from there. Another reason is the vast extent of the country. It is part of the Sind Desert, and few luxuries are procurable there. To procure the drug at all in a licit way, they have to travel long distances, so that if you had only two tolas, a man who came perhaps 30 or 40 miles to get his opium might have consumed it all before he got back, and might have to come again.

18546. (*Mr. Pease*.) You said that the testimony of the missionaries is, you believe, considerably exaggerated?—From my observations I should say it was, generally speaking.

18547. I suppose you know their testimony is remarkably unanimous?—I have noticed that.

18548. Would you not think they had far greater advantages for knowing what the effect of opium on the people was than a person like yourself passing through the country?—No, not necessarily. In the first place travelling about as we did, we mixed absolutely with the people. We lived with the people and fed on Chinese food and slept in Chinese Inns, we mixed with the people I think even more than the missionaries themselves do, for the time we were there. Then there is the old saying that "a looker-on sees most of the game." And in the third place, I think the missionaries have got, so to speak, a prejudice on the subject, which rather colours their evidence.

18549. Do you speak the language?—No.

18550. They have that advantage over you?—Certainly; but I had a friend with me, an Englishman, who spoke it

Mr.
H. E. M.
James.

22 Jan. 1894.

Mr.
H. E. M.
James.
22 Jan. 1894.

quite as well as the missionaries. It was just as if I spoke the language myself.

18551. You would acknowledge that living for years in one place they would be able to watch the effect on individuals?—Yes.

18552. Do I understand that your views, as expressed in this Report of 1891, that "in India it is a degrading vice—the mark of the debauchee," have been somewhat modified?—They are modified to this extent, that since I have looked into the question, I find there are more respectable, hard-working people in India who smoked than I believed before. Formerly my experience of opium-smoking was confined to up-country places, and I generally associated it with ne'er-do-well Mahomedans. My experience is confined in this matter to Western India, but in Karachi, and from enquiries made in Bombay, I find that there is a certain proportion of respectable labouring men who smoke.

18553. Even somewhat modifying your statement here, would you not see very great difficulty when the Government have already taken the step of preventing smoking on licensed premises, in their now being thrown open?—No, no more than allowing people to drink intoxicating liquors in a particular place. I am bound to say it enables you to keep an eye upon the people. Assuming that all the smokers of opium were ne'er-do-well debauchees belonging to the criminal classes, I think it is better to have them in sight than to drive them into holes and corners, entailing upon the police the perpetual task of espionage and making raids upon houses. Just before coming here I heard from the Assistant Superintendent of Police at Karachi that they had made 6 or 7 raids, of which two had been successful. It would be very much better, as before, to have 2 or 3 houses into which the Assistant Superintendent or the Inspector on his rounds can look in and see who is there.

18554. Sir John Lambert in Calcutta took an entirely different view to that. I think his view—if I may say so—was that if you collected a number of evilly disposed persons together, there is a great tendency to increase the number of that character of individuals. It becomes a plague spot from which infection goes forth. Do you not think there is danger in that way?—My opinion is that which experience leads me to form as a District Magistrate

The witness withdrew.

Khan
Bahadur
Muhammad
Yakub.

KHAN BAHADUR MUHAMMAD YAKUB called in and examined.

18560. (Mr. Fanshawe.) I believe you are Deputy Collector of the Sehwan Sub-division of the Karachi district?—Yes.

18561. How long have you been in Government service?—Seventeen years.

18562. Has that service been entirely in Sind?—Yes.

18563. Do you yourself belong to a Mahomedan family of Sind?—Yes, to a Mahomedan family, which settled in Sind after the conquest.

18564. Kindly tell us what you know about the consumption of opium in Sind?—Opium is eaten by about five per cent. of the entire population. The people of the Thar of all classes, the Kachis living in Sind, and some Sindhis belonging to all castes and tribes eat opium. Sindhi Hindus are less addicted to it than Mussalmans. It is consumed in liquid form by about 10 per cent. of the opium-consumers. This is common in Thar and among the Kachis. The number of opium (*chandu*) smokers is so very small that I cannot make a satisfactory proportion on the population. They are found in large cities and towns only, and are chiefly Punjabis, Hindustanis, Pathans, and some are Sindhis.

18565. By Kachis you mean the inhabitants of the Native State of Cutch?—Yes.

18566. Is the use of opium, so far as you know, increasing or decreasing in Sind?—On the whole, the use of opium is somewhat increasing. The increase does not apply to a particular class. In the Thar, I think, less quantity is consumed than in olden times.

18567. You are aware that there has been a substantial increase in the population during the last ten years in Sind?—Yes, that is the chief cause.

18568. So that you must take that into consideration before you can determine whether there has been a real increase of consumption?—The increase is chiefly due to the increase of population.

and Commissioner. Possibly Sir John Lambert thinks differently.

18555. (Mr. Mowbray.) I see that in 1891 you yourself pressed upon the Government this restriction of the amount which could be legally possessed as being the best way of dealing with private smoking shops?—Yes, because at that time I discovered at Ahmedabad that with 10 tolas of *chandu* a considerable number of pipes can be smoked, and therefore, if a couple of persons brought each 10 tolas, there was sufficient for 8 or 10 persons to have a bout. The Inspector of Police informed me that people who formerly would have been ashamed to go to the opium den, and who could not smoke before, were now taking to having little private smoking parties in their houses. Therefore, to prevent the demoralization of the people and to force people who did smoke to go to the opium den, I recommended the reduction of the amount.

18556. Do you think it has had the effect for which you intended it?—Distinctly so.

18557. (Chairman.) In reference to the question of licensing, you recognise, do you not, the difficulty of the question: if you license a place for a bad purpose you give the implied sanction of the Government to an evil. That is one aspect of the question?—It certainly is one aspect of the question. But seeing that opium-smoking has, to a certain extent, gone on in India for all these years, it appears rather an ostrich-like policy to pretend that licensing houses is the same as giving our patronage to it. It is not as if the Government were going to do it for the first time. They have had these shops under their control ever since we took the country. No allegation could be made against the Government that they are patronising demoralization for the first time, because if it is an evil, it is an evil of great age.

18558. (Mr. Pease.) I observe that in your statement you point to the very large reduction of Indian opium there is in Manchuria. Of course you are aware that it is not a proportion that applies to the whole of China?—I have not gone into the figures for the whole of China.

18559. Take the highest figure we have had for many years past, 114,000 cwt. This is now reduced to 97 cwt. It is not a proportion like that you mention with regard to Manchuria?—I do not know about the rest of China.

18569. What is the effect of the opium habit, so far as you can judge, on the physical and moral condition of the people?—As regards physical condition of Sindhis, the effects of the drug are not for good, except in the following cases:—(a) In old age a small quantity is taken to keep up strength and endurance; (b) persons suffering from long-standing cough, asthma and kindred complaints contract the habit to check the disease. The consumption in Lower Sind is, therefore, much more than in Upper Sind. Morally as well, the effects of the drug are not for good, except in the above-mentioned two cases. In cold seasons and in damp climates it is taken to warm the system. I do not think there is any objection there.

18570. Do you mean that the persons who take opium in connection with these diseases take it on medical advice, or take it on their own responsibility, so to speak?—They take it on the advice of friends: they think it is useful, and it is known to be useful.

18571. So far as you know, do you think any further regulations are necessary regarding the use of opium in Sind?—I do not consider any further regulations necessary. As regards opium-smoking, however, the habit is regarded to be injurious and degrading, and the public will be glad as much as it is checked. In my humble opinion, opium-smoking should be prohibited, and any one already addicted to it may be allowed by the Collector under a permit to smoke it at his own premises. The permit should contain restrictive clauses; and infringements may be made punishable. The principal restrictive clause should be that, "the permit holder should not use the apparatus of smoking "he is allowed to possess or the *chandu* he is permitted to "manufacture or allow the same to be used to intoxicate others."

18572. Do you recommend any change as regards the opium excise arrangements in Sind?—I would recommend only one change in Sind. Under the former system (minimum vend) the selling rate was generally 8 annas per tola, whereas it is 5 annas now. I would maintain the old rate.

18573. Will you kindly tell us what the present system is?—The present system is this. The Collector of the District selects a reliable person and he gives him the farm. No auction is held now. The man is allowed to sell at the rate of 1 anna more per tola than the rate at which he buys at the Government Depôt. He gives 4 annas per tola, and he is permitted to sell at 5 annas per tola. Out of the income so derived the former incurs expenses of management and pays to Government a fixed sum for maintenance of additional preventive establishment.

18574. That comes to about Rs. 20 a seer?—Yes.

18575. The person selected obtains opium at that rate, and is allowed to sell it at a maximum rate of not more than 1 anna per tola above Government price?—Exactly.

18576. That is how you arrive at the 5 annas. Formerly with the minimum vend clause, the selling rate was 8 annas per tola?—Generally.

18577. What would be your feeling and that of the people of Sind, so far as you are aware, as to their bearing taxation

The witness withdrew.

if the use of opium were prohibited except for medical purposes?—I would not be willing, nor would the people of Sind like to bear the extra taxation.

18578. (*Mr. Pease.*) Do you think that the evidence you have given here is in accord with the general feeling of the people of Sind?—I think so.

18579. (*Sir William Roberts.*) You say that the consumption in Lower Sind is much more than in Upper Sind: is that because Lower Sind is more unhealthy?—It is more damp and more unhealthy.

18580. In what direction is it more unhealthy; what sort of complaints are more common in Lower Sind?—In Lower Sind asthma, cough and spleen diseases are more common than in Upper Sind.

18581. Do you mean malarious conditions of the spleen?—Yes.

18582. (*Mr. Pease.*) Do persons in that district take opium for the purpose of preventing malarial diseases?—Yes, they do.

18583. Only for the cure?—Preventing also.

Mr. MIRZA JINDWADDA KHAN called in and examined (through an interpreter).

18584. (*Mr. Fanshawe.*) I believe you are Revenue Minister of Bahawalpur?—Yes.

18585. Will you kindly state what you know about the consumption of opium in that State?—I here is no particular race or class of consumers requiring special notice. People of all races and classes use opium. The average dose for the habitual moderate consumer is one *ratti* per diem, while that of the habitual excessive consumer may be considered up to one *tola*.

18586. Does the use of opium have any injurious effects upon the physical and moral condition of the people?—I have never seen the use of opium to be detrimental to the moral or physical condition of the consumers. On the contrary, the habitual moderate consumers regard it as beneficial in case of phlegmatic diseases and also for warding off weariness. The habitual excessive consumers, however, appear to be lazy.

18587. (*Chairman.*) What is the population of the State of Bahawalpur?—650,000.

18588. (*Mr. Fanshawe.*) Is the number of excessive consumers small or large?—Small.

18589. Can you tell us how the prohibition of the use of opium would be regarded by the people of the State?—The habitual consumer will resent interference with the use of opium.

18590. How would the people other than habitual consumers regard such a prohibition?—They would not look upon it as an evil thing.

18591. What would be the feeling of the people as regards any taxation that might be caused by the prohibition of the use of opium?—In case of adopting prohibitive measures, I doubt if people could be willing to bear, in whole or in part, any additional tax necessitated thereby, and, as far as I can see, people would object to the payment.

The witness withdrew.

Mr. JAISHI RAM called in and examined.

18601. (*Chairman.*) I believe you are a pleader in the Chief Court of Punjab?—Yes.

18602. And you are also a land-holder?—Yes.

18603. I believe you acted as Secretary of the Ninth Indian National Congress; and you have visited Europe?—Yes.

18604. You belong to the district of Kangra?—Yes.

18605. I believe Congress No. 9 was the last one?—Yes, the last one. It met at Lahore. I ought to say, however, that I was Secretary to the Reception Committee.

18606. Would you give us the results of your experience as to the effects of the use of opium: in what cases it is useful and in what injurious?—Its use is useful, and its abuse is injurious. When it is taken as medicine I think it is useful; but when it is taken by young men, not as medicine and not under medical advice, then it is injurious.

18592. If an order for prohibiting the use of opium, except for medical purposes, were enforced in British India, could such an order be extended to the Native State of Bahawalpur?—If the production and use of opium be authoritatively prohibited throughout British India, the extension of the order to Native States will affect their income.

18593. In that case would the State be entitled to compensation?—In the event of measures of prohibition being adopted in this State, the Durbar would be considered entitled to the following compensation:—the annual income derived from leases, and the probable loss to the people resulting from the prohibition of this valuable crop. Under the above-mentioned circumstances, this State will be entitled to a compensation of Rs. 23,000 per annum.

18594. Can you tell us what the income is that is derived from leases?—I have not got the accounts, but it is more than Rs. 15,000 per annum.

18595. Then how do you arrive at the amount of compensation stated to be Rs. 23,000?—The loss to the Government would be Rs. 15,000, the loss to the people would be Rs. 5,000, and the loss to the contractor would be Rs. 3,000.

18596. (*Mr. Mowbray.*) Are you here to represent the views of His Highness the Nawab?—I have come on behalf of the Nawab.

18597. (*Mr. Pease.*) What is the acreage under crop in the State of Bahawalpur?—About 500 acres.

18598. What is the produce of this 500 acres?—Rs. 100 per acre.

18599. Do they export or import opium?—They import it into Bahawalpur.

18600. To what amount?—About 15 maunds per annum.

18607. Looking at the question as a source of income, what have you to say?—I think it is useful. It brings annually into this country about ten crores of rupees from China and one or two other countries.

18608. With reference to the Government of India itself what have you to say?—It gives about six crores of rupees to the Government as revenue.

18609. That is valuable from a purely revenue point of view?—Yes.

18610. Have you anything to say with regard to the interest of the agricultural classes?—It gives occupation to a good many persons who are engaged in its cultivation, as well as in its trade.

18611. Those are points you make in favour of opium?—Yes.

Khan
Bahadur
Muhammad
Yakub.

22 Jan. 1894.

Mr. Mirza
Jindwadda
Khan.

Mr. Jaishi
Ram.

Mr. Jaishi
Ram.

22 Jan. 1894.

18612. In what respects do you regard opium as a harmful thing?—When it is not used as a medicine, and especially when it is taken for other mischievous purposes, it is harmful. For instance, a good many people use it in order to produce lust.

18613. It is used, is it not, for bad purposes, for instance, as poison?—Yes, it is also used as poison. These are the only two things in which I think it is injurious.

18614. Looking at the subject with the eye of a moral reformer, what do you say as to the possibility of dealing with any of the evil results of the use of opium by legislative interference?—I do not think there should be any legislative interference whatever.

18615. Will you justify that?—My grounds are; in the first instance, people do not want it at all. Up to the present time there has been no representation on the part of the people that there should be any legislative interference; and of course if there be any legislative interference, it would be quite uncalled for. My second ground is, that it is not necessary; it is not called for at all; and it is interfering with the domestic lives of the people. It will certainly create disaffection. My third ground is, that, if there be any legislative interference, it will simply remain as a dead letter, because it must be allowed as medicine under any circumstances.

18616. Develop your views as to the practicability of that limitation?—I think that the idea up to the present time is that it may be allowed as a medicine but disallowed otherwise. I do not think it will be practicable for the Government to look after the people when they are using it as medicine and when not: so that if there be any prohibitive legislation in any way it will remain simply a dead letter. My fourth ground is that there are a good many other things, such as *ganja* and *charas*; there has been no interference in those matters, and why should there be any in the case of opium.

18617. You say if there has been no restriction on much more injurious things, why should there be legislative interference with regard to a less harmful thing?—That is my opinion. My fifth ground is this: if you remove opium, more or less, it will be superseded by liquors or other things which are really much more harmful with special reference to the climate of this country.

18618. We have had many witnesses before us who have practically recommended that there should be prohibition of the use of all stimulants excepting under medical advice: do you believe in the possibility of a policy of prohibition of all stimulants except for medical use?—I think that none should be prohibited by the Government. These matters should be left entirely for the people themselves.

18619. You prefer to rely upon the cultivation of a wholesome popular sentiment upon this question, rather than recommend a restrictive policy by the Government, involving vexatious and harassing action by the police, and other consequences which you think would be disgraceful to the people: is that your view?—Yes.

18620. Have you any other ground?—My sixth ground is this. There are thousands of people who are now engaged in this cultivation and trade. If there be any prohibition or any legislative interference, the result will be that those people will in sudden be left entirely without occupation. They will raise an outcry certainly; and of course there will be some consequences which might turn out seriously. My next ground is that it is a new departure altogether. There are a great many practices which exist in this country which are called vices, and they exist in other countries too, but with which no Government has interfered at all. It is an old established policy, and I do not see that there is any reason why there should be a departure in the case of opium.

18621. Is it not the case, at least so far as you know, that there has been no attempt in any of the great countries of the world to put a universal restriction upon the use of all stimulants, except for medical purposes?—Yes. In England, for instance, a great deal of liquor is used; and although some cry has been raised for legislative interference with reference to the local option system, yet there is great deal of opposition to it: so I think to interfere in this case will be a new departure from the old established policy.

18622. If such a wide restriction as has been proposed has not been attempted as yet in any other country in the world, may I not take it from you that in your opinion to enter upon such a policy as that in the case of a Government like the Government of India, which to a certain extent is a foreign Government, would be peculiarly hazardous, and likely to create some popular discontent?—Yes.

It would be much more hazardous here than in a country which is governed by itself.

18623. As you do not contemplate dealing with what is objectionable in the use of opium by legislative interference, have you in your contemplation other practical remedies which you would prefer?—Yes.

18624. What are they?—My own idea is that the people should receive general education. Among educated classes there are not many who are addicted to the use of opium, and those who are addicted form a very small percentage. The spread of education will be the only means by which this vice can be safely removed. At present there is some tendency to check the spread of high education in this province; at the same time I may say that the measures which are taken for the spread of general education in this country are not so wide as they ought to be, having regard to the population of this country. If the education is made much wider, I think there is a greater chance of this vice being removed.

18625. You have faith in that which has been found to do much to diminish the consumption in England, namely, education?—Yes.

18626. You believe if there were more general education there would be less indulgence in bad practice?—Yes.

18627. Do you think there is a great possibility of reform by the work of temperance societies?—Yes. The temperance societies have been working in that direction. If they get some encouragement from the Government, I think they will work still better; and the result of the preaching they undertake will be that the spread of this vice will be considerably retarded.

18628. You think it will have a valuable moral influence?—Yes.

18629. (Mr. Mowbray.) You have referred to the Chinese revenue; of course your general evidence is more concerned with the consumption of opium and the revenue derived from it in India?—Yes.

18630. Do you wish to add anything to what you have said with regard to the revenue now derived by India from the trade with China?—No; I have nothing more to say regarding that; all I wish to say is that it is to the interest of this country, because it brings in about ten crores of rupees every year.

18631. (Mr. Pease.) You have said that it gives occupation to a large class of people. I suppose you are aware that Government only gives such a price for opium as will induce people to cultivate it in preference to other crops. When we were in the Behar district we had various statements from zemindars and cultivators that it was not a profitable crop as compared with other crops?—I have no practical experience regarding that subject. In this province there is no such thing as the cultivation of opium on behalf of the Government; so that I do not think I can make any good reply to that question.

18632. Are not a large number of the members of the Indian National Congress opposed to the opium trade, provided that its prohibition except for medical use does not involve increased taxation?—This subject has never been before the Congress, so I am not able to say anything as to the views of the members.

18633. You have spoken of legislative interference. There is great legislative interference now, is there not, inasmuch as it can only be purchased through a certain number of licensed houses?—It has now become a practice and has been tolerated. Anything which is newly introduced would be considered as an interference.

18634. Do you not also recognize that the increase of the facilities or the decrease of the facilities would have a great effect upon the consumption of opium?—Yes; I think so.

18635. Would you be in favour of an increase or decrease of the facilities for the purchase of opium?—I would be in favour of a decrease, provided it is done by the people themselves and not by legislative interference.

18636. Then you think that the present arrangements are as good as they can possibly be?—I have not much to find fault with the present system.

18637. (Chairman.) In the event of its becoming necessary to find any substitutes for the opium revenue, have you any suggestion to make?—I have thought out the following:—The statistical abstract issued last year shows that the opium revenue for the year 1891-92 amounted to Rs. 8,01,23,800. The expenditure, including the cost of production, was Rs. 1,86,13,730. Thus the net amount of

revenue was Rs. 6,15,05,670. Any sort of new direct taxation on the people will be highly resented. The deficiency can be made up by adopting the following means :—

(a) The imposition of duty on the import of such foreign goods as are made in British India, also, e.g.—

1. Tea.
2. Manufactures of metals, except machinery.
3. Manufactured and partly manufactured articles consisting of yarn and textile fabrics.
4. Apparel, including boots and shoes.
5. Cabinet-ware and furniture.
6. Glass.
7. Hides and skins, dressed and tanned.
8. Matches and lucifers.
9. Paper and paste-boards.
10. Perfumery, soap, stationery, toys, umbrellas, manufactures of woods, paints and colours, etc.

The duty may be imposed at the rate Rs. 3-8-0 per cent. as it existed before 1882. It will certainly be approved of by the Indian public opinion. The free import of the foreign goods has almost ruined the indigenous manufactures, and has severely interfered with the working and manufacturing classes of India.

The witness withdrew.

(Chairman.) I should like to express to Mr. Arjan Singh our satisfaction with his services as interpreter.

Adjourned to to-morrow morning at Delhi.

At the Town Hall, Delhi.

FIFTY-THIRD DAY.

Tuesday, 23rd January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.
„ A. U. FANSHAW.

MR. ARTHUR PHASE.
„ HARIDAS VE HARIDA DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESQOTT HEWETT, C.I.E., *Secretary.*

COLONEL J. COOK called in and examined.

18638. (Chairman.) I believe you are in command of the 36th Sikhs?—Yes.

18639. What is the strength of your regiment?—912 fighting men.

18640. I believe you have had 30 years' experience in Military service?—Nearly 33.

18641. Will you give us any information in your possession with reference to the prevalence of what may be called the opium habit among the men under your command? Are most of them, or a large proportion, consumers of opium in various degrees?—Yes, I think all take it more or less.

18642. Have you seen cases of excessive use?—Yes, a few only; they will not own it.

18643. Can you make out the percentage of excessive consumers?—I could do so, but it is difficult to get men to admit that they are excessive opium-eaters.

18644. And unless they make an admission you cannot detect any indications of it in their physical condition?—Yes, I can. From long experience I think I can detect men who are excessive consumers of opium.

18645. But as a matter of fact they are very few in number?—Very few in number.

(b) The reduction of military expenditure in the following departments :—

- (1) Substitution of 10,000 Indians for the European soldiers in the Indian Army.
- (2) Aden in Arabia no more to form a part of British India, and to be maintained exclusively from the English Exchequer.
- (3) Throwing open 10 per cent. of the posts of the officers in Indian Army to the Indians at $\frac{2}{3}$ ds of the salary, hitherto held by the Europeans exclusively.
- (4) Revising the list of salaries paid to the high military officers.
- (5) Reduction in the expenditure incurred on the frontiers.

(c) Disallowance of Compensation Allowance to those officers who draw above Rs. 1,000 a month.

(d) Abolition of the Council as at present constituted of the Secretary of State for India, and maintenance of the India Office by the British Exchequer.

(e) Revising the list of the salaries of certain officers in Civil employment.

(f) By letting the land hitherto used for the cultivation of opium for other purposes.

Mr. Jaishi Ram.

22 Jan. 1894.

Colonel J. Cook.

23 Jan. 1894.

Colonel J.
Cook.

23 Jan. 1894.

opium-eaters, possess as much endurance as the soldiers of other races who are not consumers of opium?—Yes, I think taking them as a whole they are capable of very great exertion and endurance. I have known cases in campaigning where a regiment has fallen to pieces, but I could not trace that to the use of opium. In my old regiment the 14th Sikhs at the opening of the Afghan Campaign in 1878 the men were attacked by pneumonia in great numbers. They had been cantoned in Peshawar, and, whether opium had anything to do with their condition of health on entering the campaign, or whether it was the malarious character of the place, I do not pretend to say, but they fell to pieces from exposure to the cold, and a great many died. We lost 103 in a month. Three or four died every day of pneumonia, but I do not know that it was traceable to opium. Except on that one occasion my experience is that the men have always been able to endure quite as well as the other troops either black or white, and to undergo great exertion and fatigue.

18653. What about their *morale*?—It is excellent; there are no better behaved men than the Sikhs.

18654. What do you think would be the feeling among the Sikh troops if, under restrictions proposed by the Government, they were unable to obtain opium unless it were medically prescribed?—That is a very difficult question to answer. I should say that in the majority of cases they take so little that they would not bother much about it. The majority of men declare that they do not take it, but my experience is that they do take it.

18655. Do you consider that such a restriction imposed by a Government circumstanced as is the Government of India, would be likely to cause dissatisfaction among the civil population?—That I could not say from my own knowledge. I do not think it would bother a regiment like my own very much.

18656. (*Mr. Pease.*) We have had evidence with regard to Sikh regiments that there are many men who take opium during the winter, who do not take it during the summer; has that been your experience?—No; I do not think I could separate the seasons at all. Men who are habitual consumers take it at all times.

18657. We are told that there were men who took it on campaign but not at other times?—My experience has been that they require to take it on campaign, that they are advised to take it. I can mention an instance. In my own regiment the 14th Sikhs the medical officer advised the Commanding Officer to allow every man to take it with him because they were consumers of opium.

18658. No doubt there is some difficulty in getting at the figures, but we have had evidence from some officers to show that there are very few consumers in their regiments, and Colonel Reid who is coming before us says that there are only nine men in his regiment who are habitual consumers. You think that in your regiment they are much more numerous?—That is my own feeling and experience on the subject, but I cannot get many men to admit that they are habitual consumers.

18659. Do you think that when your regiment fell to pieces it was for the want of opium?—No, I do not think it was for the want of opium; they had it with them.

18660. Have you ever been without opium and seen the effects upon the men?—No; I have never known an occasion when we were without it.

18661. We have also had witnesses who have said that the men who take opium do not recover from pneumonia as well as other men; can you give us any information on that point?—No, I can only give bare facts. My regiment, which I should call an opium-eating regiment, suffered very severely from pneumonia.

18662. (*Mr. Wilson.*) I gather from what you say that practically you do not see that it makes much difference any way?—Except to the men who consume large quantities.

18663. I think you say that the Sikhs who do consume opium possess as much endurance as others?—They are very fine men. You can take haphazard any of my men and ask them to do hard work, and they will do it exceedingly well.

The witness withdrew.

18664. You do not go beyond that and say that they do it better for the opium?—No, my experience of the men who take large quantities is that they usually take opium to give themselves for the time strength to undergo any labour, and are very much prostrated by it afterwards.

18665. Do I understand you to say that if they go beyond 2 *rattis* a day it is liable to do them great harm?—Yes, I think so. I think 2 *rattis* is about as much as any man can take without affecting himself by it.

18666. You think that a great many take opium but do not admit it?—They do not admit it.

18667. Why not?—Because they think it is a shameful practice. They say amongst themselves that the man who is much addicted to the use of opium is not thought well of by his fellows on account of his not being so reliable a person.

18668. Reliable in what way?—In the performance of his duty, not so certain in his actions, not so dependable, so that he may be compared somewhat to an excessive consumer of alcohol.

18669. (*Mr. Moubray.*) Have you found that in your experience?—Very much so.

18670. You are speaking of excessive consumers?—Yes.

18671. What proportion of men do they form in your regiment?—I can only be certain of a small proportion of the men in my regiment.

18672. Have you had to discharge a man out of the regiment because he was an opium-consumer?—Not for that reason. I have had cases of men becoming so useless and going to pieces that I have had to invalid them. My confirmed impression has been that it was nothing but the excessive use of opium that brought them to that state.

18673. I suppose you have had cases in which you have had to discharge or invalid people for other reasons too?—Many.

18674. Comparing those cases would you attribute any larger importance to opium than to other causes?—Over-indulgence in any intoxicating drug would of course be one cause. Then there is illness, the wearing out of the constitution, and many causes not traceable to the use of opium. Men lose their mental perceptions or get them very much impaired (that is my experience) from the excessive use of opium.

18675. Do you find that also with the use of alcohol among your Sikh troop?—We never have any cases of drunkenness by alcohol.

18676. They do not take it?—They will take as much as you like to give them, but they cannot afford it. They do not take it habitually, except in small quantities.

18677. I do not know whether you told us where your regiment is principally recruited from?—From the districts of Ludhiana, Ferozepur and Amritsar chiefly—almost all together.

18678. I may take it that the bulk of your men are men under 40 years of age?—Yes, my present regiment is quite a new regiment and contains many young men.

18679. Do you find that the habitual consumers and the few who take it to excess are more among the elder than among the younger men?—Yes, more among the elder men.

18680. (*Mr. Huridas Vekaridas.*) Do you believe that the young men who commence taking small doses are liable to increase the dose?—I think any man addicted to the use of opium is very likely to become a confirmed consumer in large quantities.

18681. If you knew at the time of his admission that a man was taking opium in small quantities, would you prefer him to one who did not take it?—If I were under the impression that a man was a reputed opium-eater I would not dream of taking him.

18682. From whatever point of view?—If he had sufficient to show marks of being an opium-eater. After years of experience I think you can detect pretty well when a man is a large consumer of opium.

18683. If a young man took a small quantity?—I could not tell it.

18684. If you knew that he took it?—I never had such an instance. Unless I saw it in evidence for myself I could not tell the man was an opium-consumer.

Subadar.
Major
Narain
Singh.

SUBADAR-MAJOR NARAIN SINGH called in and examined (through an interpreter).

18685. (*Mr. Fanshawe.*) You are Subadar-Major of the 36th Sikhs, and I understand have had 23 years' service in the Army, of which 7 years have been in the 36th Sikhs?—Yes.

18686. In what district is your home?—In the Julundur district.

18687. Will you kindly tell us what you know about the use of opium among the Sikhs?—My opinion regarding the

consumption of opium is that unless indulged in to excess it is not injurious. My father is lumbarid of his village, and is now 75 years of age; he has for many years taken 4 rattis or 8 grains daily, and he is now in full possession of his faculties. Nevertheless I think opium-eating a bad habit and often productive of harm morally and physically. I never take it.

18688. Can you tell me whether opium-eating in moderation is common in your regiment?—It is common in my regiment. About 100 men openly confess to it, but secretly 250 or 300 men consume opium.

18689. How do you think this opium-eating affects the discipline and efficiency of the regiment?—It causes no injury to the regiment. There are a few men whose physique is injured by it.

18690. Are the men who take it in excess few or many?—Very few.

18691. (Mr. Pease.) Are there more men who take it in winter than in summer?—Yes.

18692. Are the 250 men that you have mentioned those who take it in winter or in summer?—In the hot weather.

18693. (Mr. Wilson.) Do you think that as a whole

The witness withdrew.

LIEUTENANT-COLONEL A. J. F. REID called in and examined.

18700. (Chairman.) You are in command of the 29th Punjab Infantry?—Yes.

18701. Have you given much attention to the opium question?—No.

18702. What is the general tone of your regiment in reference to opium?—It is against its use.

18703. From what districts are your men recruited?—From between the Indus and the Sutlej.

18704. May I take it that few of your sepoys eat opium?—The subject has never been brought prominently before me. I instituted enquiries in the regiment, and the result of those enquiries is that few men eat opium. Nine men, that is, one per cent. of the regiment, habitually eat opium,—five Sikhs, three Mahomedans, and one Eurasian bandsman; of whom three men or one-third per cent. of the regiment eat in excess, and six men or two-thirds per cent. eat in moderation.

18705. What is the average daily consumption?—11·66 grains per man.

18706. What do the medical history sheets show to be the general result of the opium habit?—The medical history sheets of the habitual opium-eaters show that they have not been admitted into hospital more frequently than the other men. Nor has any man ever been left behind or sent back from field service on account of opium. Taking individual firing as a test, their shooting has not deteriorated. The regiment is the best shooting regiment in the Native Army of India. The opium-eater's proportion of marksmen, 1st and 2nd class shots, is the same as that of the other men. There are no 3rd class or bad shots among them. But then the supply has never been cut off. Still the habitual opium-eater's appearance is against him; he seems to have deteriorated physically. Morally the results are bad. The habitual opium-eaters are marked men in the regiment, and are not trusted like the rest. I would not enlist an opium-eater if I knew it. So much for the habitual

The witness withdrew.

NAWAB AMIR-UD-DIN AHMAD KHAN BAHADUR FAKHR-UD-DULA, CHIEF OF LOHARU, called in and examined (through an interpreter).

18715. (Mr. Fanshawe.) Will you kindly tell us the extent of the Loharu State?—Three hundred square miles.

18716. What is the population?—24,000.

18717. Does the population consist mainly of Mahomedans or Hindus?—Most of them are Hindus; there are a few Musalmans.

18718. What are the facts as regards the consumption of opium by different races in your territory?—The consumption of opium among the different races of the Loharu State is the same as in Shekhawati (in Jaipur).

18719. Do you wish us to understand from that statement there is a fairly general consumption of opium amongst the inhabitants?—They take less, but they take it in the same doses and in the same way as in Jaipur.

a soldier is better or worse for taking opium regularly?—It is an injury, not an advantage.

18694. (Mr. Haridas Veharidas.) Out of the 250 men who take opium, how many are young men?—The great majority are less than 40 years of age.

18695. How many of the young men commenced opium after being admitted into the regiment?—About 70 or 80 who consume opium did so before joining the regiment.

18696. Did you know that any of them were taking opium at the time of their admission?—The men who were transferred from another regiment when this regiment was created were in the habit of taking opium.

18697. You did not know that any of the newly employed took opium?—No.

18698. (Sir William Roberts.) Are there many in the regiment who take opium quite occasionally after some hard work, when it is excessively cold, or before some unexpectedly severe task?—There are, but I cannot say how many people take it at exceptional times.

18699. Persons who are not habitual consumers in winter and summer?—Yes, they do not take it habitually.

men. Not included in the above, about one per cent. of the regiment occasionally eat opium on cold, wet, or stormy nights, or when they expect to be called on for great exertion. This limited or occasional use of opium seems to produce no bad effects, and in the circumstances opium may be said to be a boon to poor people, who occasionally require a cheap stimulant in moderation, and not habitually.

18707. (Sir William Roberts.) I gather from your account that you are speaking really of what are called excessive consumers, people who take an average of from 9 to 12 grains a day?—Yes.

18708. You have only 9 men in the whole regiment?—Habitual consumers.

18709. Habitual and excessive?—There are nine men who habitually eat opium, and of those three take it in excess. I take excessive consumers to be men who eat 20 grains.

18710. (Mr. Mowbray.) What classes of men are your regiment?—There are 4 Companies of Sikhs, 2 of Dogras and 2 of Punjabi Mahomedans.

18711. In making enquiries did you ask the men yourself or did you enquire through the native officers, or how did you get at these figures?—Chiefly through the native officers.

18712. (Mr. Fanshawe.) From what districts are the Sikhs chiefly recruited?—They are Manjha Sikhs north of the Sutlej; we are not allowed to enlist south of the Sutlej; Amritsar Sikhs and Sikhs from Gurdaspur, Jullundur and Sialkot.

18713. With regard to the occasional use of opium, do you think that your enquiry has brought out the full facts? One or two commanding officers have told us that they have found some difficulties in making enquiries?—The men are ashamed to confess it.

18714. Do you think that in practice a larger proportion of men do actually use opium than you have stated?—That may be.

18720. Is opium-eating a fairly general habit or not?—No, it is not general.

18721. What is the effect of opium consumption on the moral and physical condition of the consumers?—The effect of the consumption on the moral condition of the inhabitants of Loharu and Shekhawati is bad, yet its use as a medicine gives hopes of its being useful to their physical and medical condition.

18722. When you speak of its use as a medicine, do you mean its use under the advice of doctors, or its use among the people themselves?—At their own wish, in accordance with the custom of the country.

18723. How would the people regard the prohibition of the use of opium except for medical purposes?—The

Khan
Bahadur
Fakhr-ud-
dula, Chief
of Loharu.

Nawab consumers in general would certainly resent any interference with its use.

Amir-ud-din Ahmad Khan Bahadur Fakhr-ud-daula, Chief of Loharu.
18724. Would they be willing to bear in whole or in part the cost of prohibitive measures in the shape of increased taxation?—The poor use opium more than the rich, and could bear any increase of taxation with great difficulty.

29 Jan. 1894.

18725. If the production and use of opium for non-medical purposes were prohibited throughout British India, what is your opinion as to the extension of such prohibition to Native States?—The grumbling against the prohibition of its use is very common among the people, but the prohibition of its cultivation will be especially injurious to Native States, chiefly to those in Malwa where opium is in abundance. Though possibly the feudatory loyal States will follow the example of British India in the prohibition, yet then the British Government will have to face a great loss in finance.

18726. Have you any other remark to make?—I may add that, even after this prohibition of the cultivation of, and trading in, opium, opium will exist in India for several

The witness withdrew.

years, and illegal crimes will be committed everywhere in the country, causing both a great disturbance and commotion and destroying the public peace, together with heavy punishment to the subjects of British India and of the Native States.

18727. I understand you to mean that you consider that it would not be practicable to stop a habit of this kind?—It will be impossible.

18728. Have you any cultivation of poppy in your own territory?—No.

18729. When you say that the grumbling against prohibition is very common, do you mean that it is so at present, or that it would be very common?—It is; there is already grumbling owing to the rumour that it will be stopped.

18730. (*Mr. Wilson.*) Is the regular use of opium a good thing for persons who are in perfect health?—It is of no use.

18731. If there were to be a prohibitory law, accompanied by some arrangement for the people to get it for medical use, would there be any objection to that?—The people in general would not like it.

SURGEON-MAJOR G. W. P. DENNY called in and examined.

Surgn.-Major G. W. P. Denny.

18732. (*Sir William Roberts.*) I think you have been Civil Surgeon in the Punjab for some years?—Yes.

18733. What opportunities have you had of studying the effect of the consumption of opium among the natives of India?—The best opportunities I have had of studying the effect of opium among the natives of India have been in connection with my charge of the jails in the Punjab. In each district of which I have had charge I have also had charge of the jail; I have had charge of a large number of jails, and as Superintendent I have had good opportunities of seeing the harm that excessive opium-eating does to prisoners who come in. They get no opium on their admission, or the quantity is reduced, and I have had the opportunity of seeing the effects of stopping the supply.

18734. Has your experience of the effects of opium been confined to prisoners?—No, not entirely.

18735. Were you also in charge of dispensaries?—Yes. I have had a large hospital in every district I have been in.

18736. What has been your experience as to the effect of opium on prisoners in jail?—A confirmed excessive opium-eater is generally a physical and mental wreck, emaciated to an excessive degree, and incapable of performing any ordinary work. He is a deplorable object to behold, his nerves are utterly shattered, and he is extremely timid and nervous. He has little or no appetite, and it is often quite surprising how little food he can manage to exist on without getting any worse, provided he is allowed his regular quantum of opium daily. Excessive opium-eaters have no stamina whatever, and succumb to comparatively trivial ailments which an ordinary man would think little of. Notwithstanding the pitiable condition of such patients, one cannot help being struck by the conspicuous absence of anything like visceral or organic disease among them, and, unlike habitual drunkards, they can generally be restored to very fair health after a few months if the drug is judiciously and carefully reduced. The condition of an excessive opium-eater is very much that of a starving man, the only difference being that the latter craves for food, while the former has no inclination for it. The extreme emaciation that excessive opium-eaters suffer from is due, I believe, simply to the fact that they are in a condition of starvation, for opium when taken in excess causes the appetite to stand in abeyance as it were, and as the patients have no desire for food, they do not indulge their appetites. The result is starvation. When the habit has been overcome, such prisoners enjoy very fair health, and the abuse of opium does not appear to leave behind it any of the sequelæ that one so often sees in drunkards, even after they have given up drink, such as cirrhosis of the liver, granular kidneys, atheroma of the arteries, gout, rheumatism, and a host of other complaints. Opium-eating and smoking does not seem in any way to aggravate such constitutional diseases as syphilis, phthisis, scrofula and rheumatism; on the contrary, it appears to be often used as a remedy for these complaints.

18737. Have you had any experience of the effect of the opium habit on persons who have means and are always able to command enough food?—Yes.

18738. Have you observed in such cases these disastrous effects?—No, I have not.

18739. So that your remarks apply not only to opium-eaters in excess, but to opium-eaters who have not sufficient food?—My remarks apply to prisoners.

18740. What has been your experience with regard to the sudden stoppage of the use of opium among prisoners?—The first and almost invariable result produced is to cause diarrhœa, intense dejection of the spirits, aching in all the bones of the body, lassitude and sleeplessness. Such prisoners will do almost anything to obtain opium. They will sell their milk (an extra diet always allowed to an opium-eater) to the wardens who bring them opium in return, and in spite of every precaution we often find that such prisoners do obtain opium to a greater or less extent for months after their admission into jail. When defeated, as they very often are, it is very difficult to know how to punish them, for their miserable condition of health does not permit of severe punishment. Every excessive opium-eater on first admission is allowed a certain amount of opium daily, the quantity being regulated according to the amount he was in the habit of consuming previously. Opium-smoking is never allowed in the jails, so smokers are given opium to eat, which satisfies them very well. The dose is steadily and regularly reduced according to symptoms, but it is a difficult matter to completely break a confirmed eater of the habit, and it has to be done with considerable caution. If the supply is stopped too suddenly, the patient's diarrhœa almost always runs on to dysentery. A very excessive opium-eater, who was in the habit of consuming 90 grains a day, recently died in the jail, the death being indirectly due to the stopping of his opium. He had been in the lock-up for some time, and became so ill as a result of his opium being denied him, that he was sent by the Hospital Assistant in charge of the lock-up to the Jail Hospital for treatment. He was suffering from very severe dysentery which he stated came on since his opium had been stopped. I gave him at once a liberal supply of opium and treated him also for dysentery, and he at once began to improve; and in a very short time gained several pounds in weight. As soon as the opium was again reduced however, he promptly became worse. This kind of thing went on for some time (about a fortnight). The man still had some dysenteric symptoms, and one day as he was walking across the ward he became suddenly faint and collapsed and died in about an hour. On *post mortem* examination I found that a small dysenteric ulcer in the intestine had burst or perforated into the peritoneum which of course accounted for his death.

18741. Did you think that the dysenteric ulcer existed independently of the stoppage of the opium or that it was a consequence of it?—I had no means of ascertaining that, because I never saw the patient until he was admitted into the jail. He was suffering from severe dysentery. I only had his own statement.

18742. Was it an old looking ulcer?—It was recent-looking, as if it were not an old chronic case of dysentery. It was an accident which could not have been foreseen, but is a good instance of the danger of stopping opium in a confirmed and excessive eater.

18743. Has your attention been specially called to

moderate opium-eaters among prisoners?—Yes. I have brought a list showing every opium-eater, whether moderate or excessive, in my jail. All the prisoners included in this list, except the few who have been released, are open to inspection if the Members would like to see them. On the 10th December last there were 502 male prisoners in my jail, among whom I found 40 men who admitted that they had been regular opium-eaters or smokers before admission. There is no reason to suppose that the prisoners would deny the fact. On the contrary, I think they are very often anxious to exaggerate the amount they eat. When my enquiry was begun, I found that a large number of the prisoners were trying to make out that they had been opium-eaters. They had an idea that Government was going to allow opium as an extra diet, and they all wanted to become opium-eaters in consequence. I was told this by my officials, and I had to be careful in ascertaining who were telling the truth and who were not. Of the 40 prisoners I have mentioned thirty-five were opium-eaters and five were opium-smokers.

18744. Those were both moderate and immoderate?—Both. The percentage of opium-consumers to the prison population was therefore 7·96.

18745. That is only amongst males?—Yes. I have left out the females because the number is very small.

18746. I suppose you have formed no opinion as to the percentage of opium-consumers amongst the male free population?—No, I cannot give the figures for it. The percentage of opium-eaters was 6·97 and of opium-smokers 4·99.

18747. Were they *madak* or *chand*-smokers?—Mine were all cases of *chand*-smoking.

18748. I believe you have made a study of the relation of the opium habit to spleen enlargement?—Yes.

18749. What is your experience on that point?—On one or two previous occasions I have taken a census of my prisoners with a view to ascertaining the prevalence of enlargement of the spleen amongst them, and on each occasion I found that nearly 50 per cent. of the male prisoners suffered in this way to a greater or less extent. Of the 40 opium-consumers on my list I find at this moment we have nine with enlargement of the spleen, or 25·5 per cent. as compared with 50. Of these nine, however, only 6 had enlarged spleen on admission into the jail, that is, when they were addicted to the habit, while three have developed enlargement of the spleen since their admission, that is, since their opium was stopped. If we take then only the six opium-consumers who had spleen on admission, we find that only 15 per cent. of the men addicted to opium suffer from enlargement of the spleen. If we analyse these six cases, however, it will be found that four of them had chronic enlargement of the spleen for a long time before they commenced opium-eating, and the enlargement was only slight on admission into jail, with the exception of one prisoner who had an enormous spleen many years before he commenced opium-eating. One of these six men was an excessive opium-smoker, but had never eaten opium. The five who ate it were all very moderate consumers of the drug, their average being only 4·90 grains per diem. From these figures (which of course are scarcely large enough to justify drawing hard and fast conclusions), it would appear that excessive opium-eaters enjoy an extraordinary immunity from enlargement of the spleen. It certainly is the impression among a large number of the natives in this part of the world that opium-eating gives immunity from enlargement of the spleen.

18750. Why do you think they got enlarged spleen after their opium was stopped?—Because it is a very unhealthy jail. It is in a very malarious locality, and we know from experience that a very large number of prisoners coming into the jail do get enlarged spleen.

18751. You think the jail itself malarial?—Distinctly so.

18752. You speak of prisoners being in the habit of making a livelihood by crime?—Among the 40 cases addicted to opium in some form I find 31 are habitual criminals, while only 9 are casuals. I do not for a moment think that the large preponderance of opium-consumers among habitual criminals can be used as an argument that the opium habit conduces to crime. It is much more likely I think that the habitual criminal takes to opium to drown his cares and troubles. His existence when not in jail is as a rule a hand-to-mouth one, he has no regular occupation, and has to make his living by any means he can, he is often in a condition of semi-starvation, and his foot-steps are dogged by the police wherever he goes. When at large, to say the least, his life is a very wretched one, and it is scarcely surprising therefore that he takes to opium-eating, for it allays the pangs of hunger and blunts his senses to the misery of his condition and sur-

roundings. These habitual criminals are generally only petty pilferers and not notorious burglars or desperate characters, and are as a rule quite amenable to jail discipline. The percentage of habitual opium-consumers was 13·5, and casuals 3·9. Of the 502 male prisoners in the jail on the 10th of December 273 were casuals, showing that nearly half the population of the jail were habitual criminals.

18753. What is your experience as to the frequency of the opium habit amongst the residents in large cities as compared with the residents of villages?—Among the 40 cases I find that no less than 32 are residents in large cities while only 8 were villagers. This follows somewhat from the fact that the large majority of opium-consumers were habitual criminals, and we know that habitual criminals are nearly always residents in large cities.

18754. What has been the result of your observation in regard to the frequency of the opium habit among Mahomedans as compared with Hindus?—Among these 40 cases I find that 22 were Mahomedans while 18 were Hindus, so that there was no very marked difference among the two classes.

18755. I see by your table you show the quantities of opium taken by each man?—Yes.

18756. Have you mentioned whether the smoking was *madak* or *chand*?—No, because in this part of the world my prisoners never use anything but *chand*.

18757. (Mr. Pease.) Has the attention of the authorities been called to the character of your jail, which you state is extremely malarious and unhealthy?—On many occasions.

18758. What is the death-rate?—The death-rate varies a good deal. The average is 36 per thousand of population.

18759. Have any other medical men that you are aware of attributed the small amount of spleen disease to the fact of the men taking opium?—No.

18760. I think you will admit that 6 out of 502 is rather a small number on which to base so serious an estimate?—I admit it.

18761. You have frequently referred to excessive consumers: what do you consider an excessive consumer?—I should not call a man an excessive consumer if I did not find any physical deterioration and if he consumed, say, 10 grains a day or downwards. But I am not prepared to state the exact amount. I could tell you from my list how many men consume more than 10 grains, and how many less.

18762. Would you consider that the jail population was more inclined to take opium than the free population?—Among the habituals certainly, but not among the casuals.

18763. What has been your experience as to the effect of smoking?—The physique of a *chand*-smoker as a rule is worse than the physique of an ordinary opium-eater.

18764. Do you think that there is any difference between smokers and eaters as to the amount of suffering they endure when deprived of their drug?—Apparently no difference at all. Opium-smokers suffer from exactly the same symptoms as opium-eaters. We do not allow them to smoke, but we give them some opium to eat, and it relieves their symptoms very satisfactorily.

18765. If you find that stopping the opium leads to enlargement of the spleen, why do you stop the opium?—Simply because Government does not allow opium to prisoners. We are only allowed to give it as medical officers in order to relieve a man's symptoms if he becomes ill. A superintendent in his capacity of superintendent cannot give opium to prisoners, but as a medical officer (I happen to be in both capacities) I can give anything I like for purely medical treatment—not as a diet.

18766. You do not think the case sufficiently clear to give it as a preventive?—No, I do not think the figures are big enough to justify that. I think it would be necessary to have larger figures.

18767. (Mr. Wilson.) Would you consider the habit of taking opium in moderation an insidious one in the way of being very bad and leading on to excess?—I am not satisfied that it always does so. A great many of my opium-eaters who have been cross-examined have admitted that they began with a small amount and steadily got worse and worse; but they were all habituals, and the life of a habitual criminal is a peculiar one. I have also known a large number of natives who have commenced with a moderate amount and have remained all their lives moderate eaters, never taking any larger quantity.

18768. I think what you have been telling us chiefly relates to male prisoners?—Entirely.

Surgn.-
Major
G. W. P.
Dennys.
23 Jan. 1894.

Surgn.
Major
G. W. P.
Dennys.

3 Jan. 1891.

18769. Do you know anything about women taking opium?—Among private native families in the cities I have met many native females who took opium regularly. I excluded females from the list because out of my 502 only 7 were females. The figures were too small to make it worth while to take statistics.

18770. We have had a good deal of discussion before the Commission in reference to the use of opium as a prophylactic against malarious fever; have you anything further to tell us upon that point any more than in connection with these jail populations?—No. I have no facts to give; I am only mentioning statistics as far as possible. It is very difficult to say very satisfactorily, when making out the figures, whether there is any perceptible difference in the number of admissions between these prisoners and ordinary prisoners. Another thing that it may be worth while to mention which makes me feel that these figures are not satisfactory is that during the last year and a-half I have systematically, with the permission of the Inspector-General of Prisons, given all my prisoners a prophylactic against fever for at least four or five months—arsenic, iron, and quinine in small doses twice a day. It has made an enormous difference in the health of the jail, and it has also enormously reduced the percentage of spleen cases among the prisoners. All the weakly men get it, not the strong men. The convalescent prisoners (nearly half the jail are on the convalescent gang) get a certain amount of extra food, and all of them get this prophylactic against fever; and as all my opium-eaters are also on the convalescent list, as matter of course these opium-eaters have been regularly taking this prophylactic against fever; consequently the admissions for fever amongst these men are strikingly few, considering the number of years that many of them have been in jail. I have not specially referred to that. I have been giving them a prophylactic. It may be that arsenic, iron and quinine caused the absence of fever, and not the opium-eating habit.

18771. You have mentioned that the mortality in the jail was 36 per thousand, have you any information or statistics as to what it is outside the jail among the general population?—In the general population the death-rate is larger. In the city of Delhi the rate varies from 39 to 45 per thousand, but then you must remember that that includes children, and the mortality among infants in India is enormous, owing to a want of knowledge of how to bring up children.

18772. (Mr. Pease.) Have you observed any difference between those who consume opium and those who do not in their power of recovering from pneumonia?—I have not noted any great difference. I can only remember one case of a man who was a confirmed opium-eater. He had pneumonia the other day, and he got very much reduced after it. He then told me that he had never stopped opium-eating during the whole of the time he was in jail; he had been systematically getting it by bribing the warders. This man was a notorious scoundrel, and he had been in jail since June 1889. He was 35 years of age, and he was in the habit of consuming 90 grains a day. He suffered very badly when he first came in. He was broken of the opium habit; he then got pneumonia, but he pulled round. He told me that when he was in hospital he was too ill to make any arrangements about bribing, and he had compulsorily to stop the opium. He has now broken off the habit. It is only since he had pneumonia that he left off taking opium, and now he feels that he does not want it. Previously, ever since 1889, he had been getting opium more or less by bribing.

18773. Do you think it is a common thing for prisoners to be able to get opium in that way by bribing the warders?—I think very common indeed. Of course there is a certain amount of difficulty about it. I do not think that a man can get his opium very regularly, but that he gets a certain amount I am sure. We constantly find bits of opium on them. The difficulty is to find the man who brings it in.

18774. Do I understand that the question of the effect of opium on the health of these prisoners had not specially attracted your attention until you began to look into it somewhat recently?—It had been my impression for a great many years that opium-eaters have a singular immunity from enlargement of the spleen. I had seen such miserable wrecks from opium-eating, and had often been struck with the curious absence of enlargement of the spleen among them, but I had not any opportunity of taking out the figure on the subject. It was only since I was asked to give evidence that I began to take statistics, and then I found that the figures proved, as far as these small figures can prove anything, that my theory was more or less correct.

18775. (Mr. Haridas Veharidas.) I believe there are not many well-to-do people among prisoners?—A large majority are in the lower class of life.

18776. Is it not difficult for them to get opium, considering the price of it?—No. The prisoners who are confirmed opium-eaters are also on the convalescent list, and that means that they get extra diet. This may be a half or a quarter of a seer of milk every day. This can be given to the man who brings it on the sly in exchange for a pice or half a pice of opium.

18777. (Mr. Mowbray.) Do the friends outside bribe the warders?—Certainly, but it is difficult for the warders to bring in anything through the front gate. They are searched going in and out. Ten grains of opium would be in a tiny bit of paper almost imperceptible, and it can be thrown among the rubbish. It is sometimes thrown over the wall at night, and in the morning they know where to go and pick it up. It is often however picked up by the wrong man, that is one satisfaction.

18778. Do you make any rule about the warders eating opium?—No, certainly not.

18779. You do not exclude a warder on the ground that he is an opium-eater?—No, we do not enquire into the question.

18780. (Mr. Fanshawe.) I believe that the prevention of passing opium into jails is a recognised difficulty in the jail administration of this country which has constantly received attention?—Certainly.

18781. And in the case of the Delhi jail you have not been able practically to stop it?—No, never.

18782. (Mr. Wilson.) Do you mean to say that warders would be searched and that a small quantity would be found?—They are supposed to be searched. Of course we cannot make the man strip off every particle of his clothing every time he goes in or out; he may go in and out 40 or 60 times a day. He is supposed to be searched at uncertain times. There is a man at the gate specially appointed to search everybody going in and out, and he has orders every now and then to make a man strip from head to foot. These people are very cunning in the way of getting things into the jail.

18783. I thought it would be so portable that it would be comparatively easy?—Small coins like a 2-anna piece are sometimes taken under the tongue but not opium.

ASSISTANT-SURGEON MUL CHAND called in and examined.

Asst. Surgn.
Mul Chand.

18784. (Chairman.) You are in charge of the Civil Hospital at Delhi?—Yes.

18785. Where did you graduate?—At the Lahore Medical School. I passed my examination in the year 1868.

18786. Are you a native of Lahore?—Yes.

18787. For how many years have you been in the medical service?—About 26 years.

18788. In what parts?—I have served throughout the length and breadth of this Province: in Peshawar, Rawal Pindi, Amritsar, Lahore, Mooltan, Kangra and Delhi.

18789. (Sir William Roberts.) In what way have you gathered your experience?—My experience with regard to the effects and abuse of opium has solely been at the different dispensaries and hospitals where I served, and also on several occasions at the jails and asylums when I acted for my Civil Surgeons in different districts. In the Punjab opium is not consumed on a large scale as in Malwa, Rajputana,

Marwar, Bikanir, Jaipur, etc., where it is not only used in a large quantity in pills and solutions, but is smoked as well in the form of *chandu* and *madak*. Moreover, as a matter of ceremony, it is presented there to friends and others who come for interviews just as tobacco, *pan* and *atar* are up-country. Rich and poor are both not averse to opium. The former use it mixed with other tonics as saffron, pearls, amber, musk, etc., while the latter use it in crude form made into pills morning and evening. People take opium habitually for sake of stimulation. After long use it becomes a habit to take it, and is then somewhat troublesome to stop. Their trouble in giving it up or reducing it in quantity is much more imaginary than real. Of course those who are addicted to its use since a long time and consume large quantities do suffer (when its supply is suddenly cut off) from lassitude, yawning, aching of bones, indigestion, constipation, watering of eyes, great uneasiness, loss of sleep, and eventually diarrhoea, but if a small quantity is administered

to them at their usual hours they do not suffer from any of the above effects and express their contentment. It is generally believed that once a man is addicted to its use he can never abandon it. In my private practice I have always been able to stop its use, e.g., I have done so in several cases at Amritsar, Pind Dadan Khan, Kasur, and Delhi in the course of a few months without any discomfort or detriment to their health by gradually reducing the quantity. Moreover, amongst the prisoners on admission to jails and the inmates of asylums, I have invariably been successful in stopping their use, and they never expressed afterwards any craving for it, but on the contrary improved in their health.

18790. You mean that they never expressed their craving during their residence in Delhi?—No.

18791. You do not know their history afterwards?—No, it would be impossible.

18792. Will you tell us what is your view as to the hurtfulness of opium compared with hemp drugs and alcohol?—Opium is by far less hurtful than hemp drugs, and specially alcohol, which deranges the liver, kidneys and other organs, and the use of which cannot be stopped. My patients who express their willingness to leave off alcohol I always advise them to use a very small quantity of opium instead, which they can leave off as soon as their craving for alcohol stops. Alcohol consumers among the natives of India usually go to excess, but it is not always the rule with opium-eaters, except when they take it by their own hands.

18793. What do you mean by that?—If they take it themselves they go on gradually increasing, but if it is given by their servants or friends at proper hours it is not increased at all. The rich can call their servants to bring them their opium, but the poor natives always keep it in their own pockets.

18794. You mean that the rich can have it separately administered in fixed quantities daily?—Yes, they make it like pills, and they can get it mixed with saffron and other things.

18795. (Sir William Roberts.) What is your opinion as to the effects of opium when taken in large quantities?—Opium taken in large quantities does no doubt produce a state of stupefaction, but on its effects being over people appear and work like abstainers, and I have never seen a single case where its consumer in moderation was ruined in body or soul, or reduced to a state of skeleton. On the contrary, it stimulates or gives energy, and encourages a man for undertaking any laborious task or going out on a journey, prevents fatigue, makes bold, preserves sight, and sustains the body after middle age, helps to prevent waste, and keeps the mental and bodily powers unimpaired. People under its influence can stand against cold much better than abstainers. Paupers who have very little to take for their diet can work while under its influence much better than abstainers. In the Punjab opium is largely taken by Jat Sikhs. I have seen several villages in the Delhi, Amritsar and Lahore Districts, specially in the latter, in the neighbourhood of Ioliani and Dubthu during my vaccination and sanitation inspection of the districts which were flooded with canal water submerging the whole irrigated land and making it a regular swamp where any medical man would at once arrive at the conclusion that such villages must be very unhealthy and their inhabitants stricken with malaria poison, but to my surprise I found them perfectly healthy and stout. On inquiry I was informed that the use of opium keeps them off from fever, cold and the other effects of moisture. I believe opium prevents fever and consequent spleen, and one cannot blame an opium-eater if he uses a moderate quantity. The majority of them use opium in strict moderation; very few go to excess; the moderate dose being from a quarter to two *rattis* which equals to from one-half to four grains. One *masha* or 16 grains is a large dose, and in rare cases people take as much as several *maschas*. I had an old *afimchi* as my cook in 1869 when at Kasur in the Lahore District, and on account of my being a Health Officer of the place I had every day the first thing in the morning to go round every part of the town for sanitation inspection, and the old opium-eater always after taking his usual dose was up and did everything for me before I awoke. In fact, this man of 60 years of age was much stronger and more energetic than myself, who was then only 23 years old. In old age opium-eaters in some cases appear sorry, dejected and emaciated, but this is due more to disease and old age than to the habit of opium. I can mention several other instances where, especially in the old age, opium has given immense assistance to the failing health and the sustaining power which it imparted to the consumers. Natives would never like to tell exactly the quantity they take for fear that they shall have to increase

the dose. Very few people take opium for vicious purposes to increase the virile power. Opium in its later effects acts as a sedative and gradually becomes a diet. Generally people begin to take it at or after 40 years of age.

No crime has ever been done under the influence of opium. In some cases it is used for suicidal purposes by females on exposure of their bad conduct or through jealousy, and sometimes children are accidentally poisoned when addicted to its use. In India some females, especially in the poor community, give opium to their children to make them quiet and go to sleep while they are themselves engaged in doing household work. This custom is no doubt very bad, but in two cases that I treated at Delhi, the fact that the children were habituated to the use of opium saved them from death. The parents of these children bought one pie worth of opium, and after giving a little kept the rest in the house which the boys accidentally took while their mothers were attending to some household work. These boys were treated at the hospital and recovered. In my opinion if they had not been accustomed to take opium the ordinary treatment of keeping them awake, pumping out the contents of stomach, and the administration of tea, coffee and catechu together with the hypodermic injection of atropine would not have brought them round. Better class people do not smoke opium, as it is not considered respectable to resort to the dens where people of all sorts congregate for the purpose. Prostitutes and other menials, especially amongst Mahomedans, are much addicted to this vice. In Upper India no such habit exists. The *chandu*-smoking people have migrated from the North-Western Provinces to the Punjab. I have seen no Punjabi ever smoking opium. Only Hindustanis smoke in Anarkali and cantonments. Very few take morphia. I have a respectable patient who is addicted to its use, and is in an excellent state of health. He has taken ten or twelve grains daily for the last seventeen years. In my opinion opium-eaters enjoy immunity from sickness in a remarkable degree when compared with others. Its use is therefore beneficial in every respect and does not promote immorality in any case.

18796. (Mr. Pease.) Do you give crude opium to patients in hospital?—Yes, that which we get from the bazaar; formerly we got it from Sialkot, and medical depot; now we get it from the bazaar.

18797. Do you take opium yourself?—No.

18798. Do your family take it?—No, I am always suffering from cold and catarrh, and I shall take a little, but I have not commenced it.

18799. Do you advise persons in health to take opium?—No; there is no necessity for it.

18800. In health you think it is a bad habit?—In health it is a bad habit.

18801. (Mr. Wilson.) Will you explain a little more what you mean when you speak of persons taking it by their own hands? Do I understand you to say that if servants are in the habit of bringing the opium the consumers are not liable to increase the dose as they would be if they had it constantly by them, is that what you mean?—Yes; if the servants bring it they are not liable to increase the dose.

18802. If a rich man whose servants brought him his opium felt he would like a little more could he not ask his servant to bring him a little more?—Yes, he could take whatever he liked, but I am talking of the general rule, and as a general rule these people keep the pills ready made. The servant brings perhaps one pill and a glass of water. Of course if he asks the servant he can get 10 pills more if he likes.

18803. But you think that the fact of its being brought to him checks the increase a little?—Yes, it checks the increase if it is brought by another man, a friend, or a brother, or a servant.

18804. You say you have never seen a case where the consumer was ruined in body?—Especially amongst the moderates; those who take it in moderation I have never seen reduced to the state of a skeleton.

18805. What do you consider moderation and what excess?—One or two *rattis* morning or evening, or at times four grains amongst males.

18806. Amongst women?—Two grains, one in the morning and one in the evening.

18807. You say that these people work well under its influence, but when the influence has passed, can they work?—Those who are amongst the moderates are accustomed to take a certain quantity, and if they go on for several years it is not possible to recognise that they are opium-eaters.

Asstt. Surgn.
Mul Chand.

23 Jan 1894.

Asst.-Surgn. Mul Chand. 18808. You have said that poor people who have little food work better under the influence of opium?—When they are under its influence they can stand hard work, and if they are exposed to the cold they do not suffer so much.

18809. How do they get on when they are working and have not got their opium?—It is difficult for them to get on with their work; they have no clothes to wear and no proper food.

The witness withdrew.

Babu Hem Chunder Sen.

Babu HEM CHUNDER SEN called in and examined.

18813. (Sir William Roberts.) I believe you are a medical practitioner in Delhi?—Yes.

18814. Do you hold a diploma?—Yes.

18815. Where did you get it?—At the Calcutta Medical College.

18816. Your experience has been amongst the population here as a general practitioner?—Yes.

18817. Were you ever in the service of the Government?—No.

18818. You have always been an independent practitioner?—Yes.

18819. Will you kindly tell us what your experience has been in regard to the effect of opium on the people?—The points which I wish to touch are these:—First, the habit of giving opium to young infants from the age of one month to two and three years. In the Delhi district this is given to 60 per cent. of the children, while in Rajputana and Gwalior it goes up to 75 per cent. Poor people give it under the impression that the children will go to sleep and the mothers can carry on their duties as labourers; while rich and middle class people give it under the belief that children become less susceptible to cold and to ward off the supposed injurious effects of milk. It is a common thing to be told in the case of children that the child gets opium, and that we are to use discrimination in prescribing; besides, we often get cases in which an overdose has been given, and the child is brought in a semi-comatose condition, but these cases generally get well. The effect of opium on these children is not so bad as one would expect to see, that is, most of them are fairly nourished, excepting those cases in which they do not get sufficient milk to drink; then habitual constipation leads to enlargement of the liver, and gradually emaciation sets in, and they look miserable specimens of childhood. Their growth as a rule becomes stunted, and they show distinct signs of wasting. The bad effects are generally seen after the first year of their life, as at that period they commence giving solid food to the children and stop milk. In treating these cases, I mean those children that are given opium habitually, there is a good deal of difficulty in checking where there is diarrhoea and dysentery. The quantities given to them generally are from half a grain up to three grains a day; some are given twice daily in divided doses; others are given once daily in the evening. They become so thoroughly used to the drug that if it is stopped they begin to cry day and night almost for a day or two, and along with it gastric disturbances take place. I have never observed anybody contract this habit from this period, owing to their getting opium in infancy. The children are allowed to take opium up to the age of three or four years. When this drug has to be discontinued it is done gradually by reducing the quantity which takes about three or four months. In most of the cases the parents are not addicted to this habit. Adults as a rule take it at the age of 40 years, and in most cases they take it for coughs, bowel complaints, or rheumatism. Once contracted it is very difficult to leave this habit, as it produces serious gastric disturbances. It is sometimes taken as an aphrodisiac. The morals of opium-eaters are in no way depraved; they are generally very quiet, inoffensive and peaceful; they are never boisterous like drunken people. We never see opium-eaters committing serious offences. There are no cases recorded in which opium has been the exciting cause of insanity, like alcohol, ganja, etc. Certainly we find opium-smokers committing petty thefts, etc. Opium-eaters are not looked down upon in society as an opium-smoker is. The word *chandu-khor* is a word of reproach. Lastly, I beg to say that the people are not at all prepared to bear any fresh taxation. Tobacco should on no account be taxed.

18820. Have you had experience yourself of children who have been given opium being accidentally poisoned?—I have seen not less than seven or eight cases like that.

18810. I do not understand why the natives would not tell the quantity they take on account of having to increase the dose?—It is only their suspicion; they are weak-hearted and have no reason; it is simply their ignorance.

18811. (Sir William Roberts.) Or superstition?—Superstition.

18812. (Mr. Wilson.) Where is Anarkali?—It is a suburb of Lahore.

18821. How long has your experience extended?—Nearly 14 years.

18822. Are you speaking of fatal cases or cases that were brought in, the children being comatose from an overdose?—They were brought in comatose, and they recovered gradually.

18823. Have you seen any fatal cases?—Only one.

18824. In the whole of your experience you have only encountered one fatal case from this habit?—Yes.

18825. I suppose as a medical man you would say that the giving of opium to infants was a bad habit?—I call it a bad habit, but I find from experience that it is given regularly in this district.

18826. Have you noticed signs of malarial trouble in infants?—Yes, we find here many cases like that. Children get enlarged spleen and liver very frequently.

18827. Have you ever seen that in newly-born infants?—Yes, in some cases, because the mothers have had a good deal of malarial fever during the pregnancy.

18828. Is it distinctly your impression that a malarial constitution may be congenital?—If a mother gets fever and the child takes the milk, it generally develops malarial symptoms.

18829. You say that children who are habitually given opium sometimes become emaciated and miserable specimens of childhood; do you think these cases are due to unskilful administration on the part of the mothers giving too much, or what?—Sometimes they go to excess. I have mentioned that those children get emaciated who do not have proper quantities of milk food.

18830. It has not occurred to you that some of these cases may be really cases of children suffering from malarial spleen?—No, those cases are quite different.

18831. You are able to distinguish them?—Yes.

18832. Do some of these children, who are habitually dosed too heavily with opium, die?—Sometimes when they get liver disease.

18833. But do they not die from a sort of chronic starvation?—My impression is that generally they die when they do not get proper food. They get habitual constipation which leads to enlarged liver, and they die from that; you may call it a state of semi-starvation, because they do not get proper food.

18834. You have not seen this condition induced in the children of persons who are able to give proper food?—No.

18835. Only in the children of the poor and half-starved?—Yes.

18836. (Mr. Wilson.) Should you say that, generally speaking, the practice of taking opium habitually in small doses was good or bad for persons in health?—It is a bad habit certainly.

18837. Do I understand you to mean that if these children have opium given to them it is more necessary for them to have plenty of milk and good food?—I think so.

18838. You say that opium-smokers commit petty thefts? Do you know whether opium eaters do the same?—There may be rare exceptions, but generally we find that these opium-smokers commit petty thefts, because they are poor people and always in want.

18839. Are those persons who are in the habit of taking opium daily, although they are in perfect health, looked down upon?—I do not think that opium-eaters are very much looked down upon; we do not generally find that people pay any disrespect to them.

18840. Have you anything to tell us about the use of opium as a prophylactic against fever in malarious districts?—I never use it, nor do I believe that it can act as a prophylactic against fever or enlarged spleen.

18841. You have told us that you have frequently seen children with enlarged spleen—do you mean children who take opium, or who do not, or both?—During my practice I have observed that those children who are suffering from malarious fever begin to get enlarged liver and spleen.

18842. Have you noticed any connection between enlarged spleen and the use or non-use of opium?—If children having enlarged spleen are given opium, the opium increases the mischief.

18843. (*Mr. Mowbray.*) You have told us that you think that habitually taking opium by healthy persons is a bad habit; may I ask if you think that it is so bad a habit that Government ought to interfere with it?—If Government can do it without taxation I do not think there can be any harm. But it is difficult for those who are generally addicted to the habit to give it up at once. If it could be gradually done I see no reason why it should not be done.

18844. There are, I suppose, several bad habits to which the people of this country and of other countries are addicted; I suppose you would not recommend Government to interfere with all bad habits?—We must take into consideration how far people are prepared at once to give up the habit.

18845. That is exactly what I want to suggest. I am asking whether, considering the feeling of the people, you think the opium habit is so bad as to justify the interference of the Government?—I have said that it is not a habit which causes a person to be looked down upon in society. I think it a bad habit, but it is not everybody who thinks it a bad habit.

18846. You are rather giving your own personal feeling about the habit?—Yes. Generally speaking opium-eaters are not so much looked down upon in society. But after all, it must be said that a poison must act as a poison taken at any time.

18847. (*Mr. Haridas Voharidas.*) You say that opium-eaters are not looked down upon so much: would you think that alcohol-drinkers are looked down upon?—Yes, people who take alcohol are much more looked down upon in society than opium-eaters.

18848. (*Mr. Fanshawe.*) What is the general opinion in Delhi, so far as you are able to judge, as to Government prohibiting the use of opium, apart from your individual opinion: would it be in favour of such prohibition or against it?—As far as I have enquired by talking to people, they are not prepared at once to have the sale of opium prohibited entirely.

18849. (*Chairman.*) I gather from your statement that you regard the habit of taking opium in the case of healthy persons as a bad habit, and the habit of taking alcohol as a worse habit?—Yes.

18850. (*Sir William Roberts.*) This, I understand, is a malarious neighbourhood?—Very malarious.

18851. Of course there are a great many conditions that cause suffering arising in malarious districts such as diarrhoea, dysentery and rheumatic pains: is opium as a household remedy useful in these conditions?—It is used

to a large extent as a household remedy, but there are different views on the subject. I do not care to use opium so much in cases of diarrhoea, because I think that afterwards it has an injurious effect upon the system.

18852. Your impression is that the popular or domestic use of opium, and also its use by people over 40 years of age, is on the whole mischievous more than advantageous?—Generally we find that the people who take it do not seem to thrive so badly under it as one would expect. Taking opium as a poison, one would naturally expect that they would thrive very badly, but we find that they do pretty fairly. Taken as a household remedy, I have seen rheumatism and diarrhoea perfectly controlled by opium in many cases. They generally commence opium for catarrh or rheumatism, and then it gradually grows into a habit.

18853. I presume you recognise that opium plays a double part. That it is a medicinal agent, an anodyne and hypnotic, and astringent; and also that it is, like tobacco or alcohol, an exhilarant and stimulant?—Yes.

18854. Do you think that taking it as an exhilarant and comforter like tobacco, it is unwholesome?—I would not recommend it as an exhilarant or stimulant.

18855. I presume you would not recommend tobacco or alcohol on the same grounds?—That is so.

18856. You prefer that healthy people should have none of these things?—Yes.

18857. (*Mr. Wilson.*) Suppose some measure of prohibition or stringent restriction were adopted, subject to provisions by which opium would still be available for medical purposes, and also for those who have become so thoroughly habituated to its use that they might suffer from being deprived of it, would you be in favour of such provision or stringent restriction?—I would be in favour of such a provision if we were not taxed for it.

18858. Apart from the question of taxation, you would be in favour of it?—Yes.

18859. And if it was not accompanied by an additional tax, do you think that the majority of the people would be satisfied with such a prohibition?—Yes, I think if they were not taxed they would not have so much objection.

18860. The taxation is the great barrier?—Yes; and those who are addicted to the habit would not like to leave it off at once.

18861. (*Mr. Mowbray.*) Are you aware that if the excise taxation which is at present levied on opium-consumers be done away with, that revenue would have to be made up by taxation which would fall upon others, non-opium-consumers as well as opium-consumers?—Yes.

18862. Do you think that would affect the views of non-opium-consumers as well as opium consumers?—I think it would to a certain extent.

18863. Are you aware that nobody has ever yet suggested that the deficit in the excise revenue should be made up by anybody but India itself?—I am not aware of that.

The witness withdrew.

KHAN BAHADUR MUHAMMAD IKRAMULLA KHAN called in and examined.

18864. (*Mr. Fanshawe.*) You are an Honorary Assistant Commissioner in Delhi?—Yes.

18865. Are you a Government servant?—No; I am a Sub-Registrar. I get some remuneration, but I do not get any pay.

18866. As Sub-Registrar you obtain a commission on the fees?—A remuneration.

18867. Are you a regular resident of Delhi?—Yes.

18868. Will you kindly state what you know about the use of opium by the people of Delhi?—Opium is mostly given to babies and children for the purpose of giving them sound sleep, and also as a preventive of all diseases arising from *nazla*, or cold. It is also used for relieving headaches and different kinds of pains. It is used both by old men and women, by higher and lower classes. Opium is chiefly and variously used for medicinal purposes.

18869. When you speak of medicinal purposes, are you referring to people taking opium on the advice of doctors, or to their taking it at their own wish?—Both.

18870. What is the feeling of the people in regard to its use, that is, would they be in favour of interference by

Government to restrict its use, or would they not?—The feeling of the people in regard to the use of opium is that they would never be in favour of interference by Government to restrict its use, because most of the people use it in one way or the other.

18871. What is the popular view in the city of Delhi and in the neighbourhood in regard to the consumption of opium, and in regard to the existing arrangements for its supply?—The popular view in the city of Delhi and in the neighbourhood in regard to the consumption of opium is that its use is not regarded as a bad thing such as that of *charas*, *ganja*, or alcoholic drinks. On the contrary, opium is looked upon as a useful medicine. It is only the excessive habitual use of opium which is in disrepute, and it is only this class of persons that is called *Afimis*. I am not prepared to answer the last portion of this question in regard to the existing arrangement for its supply.

18872. Would the people be prepared to bear any part of the cost of prohibitive measures, for example, in the form of the taxation of any other product, or would they not?—The people would not be prepared to bear any part of the

cost of prohibitive measures: So far as I know, the very name of prohibitive measures would be a terror to them. Any arrangement calculated to make it procurable at a cheap rate would be welcome. Any enhancement in its price would certainly be a great hardship on the people.

18873. (*Mr. Pease.*) What do you mean when you say "most of the people use it in one way or the other"?—Some use it internally, taking it in doses; some use it as medicines and ointments applied on the different parts; and some drink it.

18874. In one way or another you mean?—Some drink it in doses; others use it as a medicine applied to parts where the pain is.

18875. Do you think you are strictly correct in saying that most of the people of Delhi use opium?—Yes, I think I am correct in saying most of the people use it in one way or the other.

18876. What proportion of the people of Delhi do you suppose use it as a luxury, not for medicinal purposes?—A very small portion I should say, comparatively. I cannot give any exact number.

18877. Then you would say that nearly one-half of the people of Delhi are taking medicine?—More than that, three-quarters I should say.

18878. (*Mr. Wilson.*) I understand you to say that opium is chiefly used for its medicinal benefits?—Yes.

18879. Supposing any prohibitive or restrictive measure made adequate provision for its continued use for medicinal purposes, would you object to such prohibition?—I would object to it, because it will entail fresh taxation, and that would not be liked in any way.

18880. If it was so arranged as not to entail additional taxation, and so that the people could obtain it for its medi-

cal benefits, what would you say then?—If it was at the same price as they can get it now, I think there would be no objection to that.

18881. (*Mr. Mowbray.*) What do you mean by "medical purposes"? do you mean when a man has once had bowel complaint or something, and then by the advice of his friends he begins to take opium—we will say at the age of 35 or 40—and goes on taking it: is that a medical use?—I think it is certainly.

18882. Practically you would have to provide for the supply, I think you said, of something like three-fourths of the people of Delhi for medical use?—Yes.

18883. How do you think that that could be provided?—As I understand any prohibitory measure will entail other taxation.

18884. Putting the question of taxation on one side, I want to know what you understand by adequate provision for medical use when you say you think the prohibition would not be objected to if adequate provision were made for medical use?—I can hardly think of that provision.

18885. With regard to the question of taxation, you are aware, I suppose, that with regard to the excise revenue raised from the consumption in India there has never been any suggestion made that that should be paid by anybody but India itself?—Yes.

18886. And, therefore, if the excise revenue from opium were taken away that revenue would have to be made up by the people of India in some form of other taxation which would fall on non-consumers of opium as well as upon consumers of opium?—Yes.

18887. What do you think would be the probable result of that upon the feelings of the people at large?—The people at large would dislike it: they would not approve of it.

The witness withdrew.

Rai
Bahadur
Sheo Sahai
Mal.

RAI BAHADUR SHEO SAHAI MAL called in and examined (through an interpreter).

18888. (*Mr. Fanshawe.*) You are an Honorary Magistrate and Municipal Commissioner of Delhi?—Yes.

18889. Are you a regular resident of Delhi?—Yes.

18890. Will you kindly tell us what you know about the use of opium by the people of Delhi?—The people are much given to the use of opium, which is used medicinally as a preventive in the case of catarrh, etc., which has become very prevalent in this city. It is therefore considered useful for health.

18891. When you speak of the medicinal use of opium do you mean the use by the advice of a doctor or by the people at their own wish?—The use by people at their own wish.

18892. What is the feeling of the people of Delhi in regard to its use, that is, would they be in favour of Government interfering to restrict the use of opium or not?—The people would not like Government interference.

18893. How is the habit of opium-eating looked upon by the people of this city?—Opium-eating is not looked upon as a vice, and the drug is used for the benefit of health.

18894. What opinion have you to express with regard to the existing arrangements for the supply of opium?—The existing system of supply is not considered satisfactory because pure, unadulterated opium is seldom procurable.

18895. I understand you to mean that the opium supplied in the Punjab is not so good as the excise, or Gov-

ernment, opium supplied from Ghazipur?—The Government opium from Ghazipur, I consider, is better than the supply in the Punjab.

18896. Would the people of Delhi be prepared to bear any part of the cost of prohibitive measures, for example, in the form of taxation of any product, or would they not?—The people would not like the Government to prohibit the production of opium and the imposition of a fresh tax on any other product, because it is the consumer of opium alone who has to pay the tax now, whereas in the other case, the general public would have to bear the burden of the fresh taxation.

18897. (*Mr. Mowbray.*) What is the position of a Municipal Commissioner in Delhi, and how is he appointed?—I was nominated by Government: I have been a member of the Municipal Board for 17 years. I am an elected member now.

18898. How long have you been an elected member?—Since the introduction of the Local Self-Government scheme. Eight years ago.

18899. (*Mr. Wilson.*) Do you consider that the habitual and regular use of opium is a good thing for young men in good health?—The habitual use is not good for young people.

18900. I mean young men from 20 to 30?—It is not good for young men from 20 to 30.

18901. (*Sir William Roberts.*) I suppose you would say the same thing with regard to the use of alcohol?—Yes.

The witness withdrew.

KHAN BAHADUR NIZAM-UD-DIN KHAN called in and examined (through an interpreter).

Khan
Bahadur
Nizam-ud-
din Khan.

18902. (*Mr. Fanshawe.*) You are an Honorary Magistrate of Delhi, and were formerly in the Customs Department?—Yes.

18903. Will you tell us what you know about the use of opium by the people of Delhi?—I have been living in Delhi for the last 22 years, or since my retirement. I have no agricultural land but a garden granted by Government. I know that thousands of people, male and female, use opium. The city being situated on the banks of the Jumna River, there is a good deal of moisture about, and since the construction of the canal, which runs through and

almost surrounds the city, and since the opening of the water-works, complaints of catarrh, cough, etc. (*nazla*), have become more general, and opium is used as a preventive and has proved useful to the old. It is given to children also to keep them quiet, and mothers attend to their household duties while the child sleeps under the influence of opium. In short, although opium is not a very good thing, it is not so bad as to be kept out of the country. It is a necessity in certain cases, and is very beneficial to natives of this country if taken after the age of 40. The excessive use of it is, however, very injurious.

18904. What is the feeling of the people in regard to its use, that is, would they be in favour of interference by Government with a view to restrict its use, or would they not?—Those who use it consider it a very good thing. It is indispensable for the health; and those who are addicted to its use cannot perform their duties, whatever they may be, without it. If they cannot get it they become dull bodies, and their hands and feet become useless. There are two kinds of people who do not use it;—first, those who hate it entirely for its own sake, and secondly, those who are of phlegmatic temperament and hot tempered. Teetotallers also do not like its use. Persons with phlegmatic temperament do not commence its use when they are young, but after the age of 40 they say that they would like to begin it. In short, if Government takes any measure to stop its use, in my opinion the people will not like it, because it is a useful article. The excessive use is certainly harmful.

18905. What is the popular view in the city of Delhi and in the neighbourhood in regard to the consumption of opium and in regard to the existing arrangements for its supply?—As already stated, in and around Delhi many adult persons and even children use opium, and whether dear or cheap they have to procure it somehow. They prefer, however, the Meerut made "sarkari" opium, and manage to procure it as best they can. The Punjab article is considered to be very inferior, and the difficulty of procuring pure opium locally is felt as a hardship.

18906. Would the people be prepared to bear any part of the cost of prohibitive measures, for example, in the form of taxation of any other product, or would they not?—The people would not like any prohibitive measures being adopted

The witness withdrew.

RAI SAHIB CHANDHRI NATHWA SINGH called in and examined (through an interpreter).

18915. (*Chairman.*) You are a Jat Sikh of Panchi Jatan?—Yes.

18916. What have you to say with regard to the use of opium?—The people are accustomed to the use of opium in the place where I live and where I own land. They use it medicinally. Old people resort to it for the benefit of their health, as it aids their digestion. It is also given to children as a preventive against colds. The people are so addicted to the use of opium that if Government were to place any restrictions as to its use or enhance its price they would consider themselves ill-treated. Opium is not produced in the district where I live. If prohibitive measures are adopted and the present taxation abolished the people would grumble, and nobody would be prepared to bear any portion of the tax on some other product, as now only the consumers of opium have to bear the taxation, and if a fresh tax were imposed on some other product the general public would have to suffer.

18917. (*Mr. Fanshawe.*) When you say that they use opium medicinally, do you mean that they use it on the

The witness withdrew.

Adjourned to to-morrow.

as to its use, nor would they like to face any taxation which it may be found necessary to impose in lieu of the existing tax on opium. No one would like to see the use of a drug which is believed to be beneficial to health prohibited and fresh taxation imposed in lieu of the present tax.

18907. (*Mr. Wilson.*) Is the constant use of opium a good thing for a man between 20 and 30?—It is a bad thing.

18908. Do any of your family or friends between the ages of 20 or 30 use opium habitually?—None of my family, and so far as I have known, none of my friends.

18909. Do any of them at an advanced age use opium habitually?—Out of my 50 friends there are 10 who use opium after the age of 40.

18910. Do you take any yourself?—I do.

18911. How much?—Two *rattis* (or 4 grains) per day.

18912. How many years have you taken it?—I commenced eating opium 22 years ago when I migrated into Delhi from Sirsar. The climate of Sirsa, Zillah Bhatiana, was a very dry one. I found the climate of Delhi very moist and damp, and I caught many colds, and so I took to taking opium.

18913. What do you mean by those who hate opium for its own sake?—Those who retire from the world,—the religious people.

18914. Do you mean the *fakirs*?—I do not mean the common *fakirs*.

Khan
Bahadur
Nizam-ud-
din Khan.

Rai Sahib
Chandhri
Nathwa
Singh.

advice of doctors or of their own free will?—On the advice of Yunani Hakims and Vajds.

18918. Only on their advice, and in no other way?—Generally on their advice; those people who are experienced use it at their own wish.

18919. (*Mr. Mowbray.*) How long have you been President of the Local Board, Sonapat?—For nine years.

18920. Are you an elected member of the Local Board or a nominated member?—An elected member.

18921. Is the President of the Local Board elected by the other members?—Yes.

18922. (*Mr. Wilson.*) How are the members of the Local Board appointed?—Some of the members are appointed on the recommendation of the Deputy Commissioner by Government.

18923. How many nominated members are there?—Six.

18924. How many elected members?—Twelve.

At the Town Hall, Delhi.

FIFTY-FOURTH DAY.

Wednesday, 24th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

RAI BAHADUR GURSAHAI MUL called in and examined.

Rai
Bahadur
Gursahai
Mul.

18925. (*Mr. Wilson.*) Are you a Government pensioner?—Yes.

18926. And retired from the service of Government as Assistant Secretary to the Punjab Government?—Yes.

24 Jan. 1894.

Rai
Bahadur
Gursahai
Mul.

24 Jan. 1894.

18927. From your general experience, is it your opinion that the use of opium by the poorer classes is productive of misery and wretchedness?—Certainly. I have not made the subject of the evils arising from the use of opium as my special study, but from general observation and experience I am confirmed in my opinion that its use by the poorer classes of the people is productive of no small misery and wretchedness. Generally the income and earnings of the poorer classes of people are very limited, and they can with much difficulty provide the commonest necessities of life, but when they take to opium the result is that they have not infrequently to starve themselves, their family, and children in order to save money for the purchase of opium wherewithal to satisfy their craving for it. They generally begin to take opium believing it to be a stimulant and promoter of sexual passion, but alas! they do not in the least think of the evil consequences awaiting them and those dependent on them. The case of the well-to-do men who are addicted to the use of opium is far different from theirs. They can well afford to get good and nourishing diet in sufficient quantity to counteract its evil effects, and the drain on their resources by the purchase of opium is not much felt by them. If not carried to excess the results in their case are seldom found productive of any serious evil consequences. At the commencement the poor people begin to take a very small dose of opium, but as habit gets old there is a general tendency to increase it. When people who are addicted to the use of opium cannot obtain it at the usual time their condition then is truly pitiable. It is no exaggeration to say that they feel the greatest inconvenience and almost writhe in agony and lose all energy and self-control. I have often seen people endeavouring, nay making firm resolutions by taking the most solemn oaths and binding themselves by everything they hold most sacred and dear to leave off this bad habit, but when the demon of craving for opium comes they forget everything and indulge again. It is an admitted fact that it is not an easy task to relinquish the habit of taking opium, because the craving for it gets stronger and stronger the longer the habit is indulged in. Women in cases of disagreements with their husbands or other relations, and widows generally to hide their infamy, if practising immorality, commit suicide by taking opium, because they have every facility in purchasing it, and do not experience such difficulties and drawbacks as in obtaining arsenic. I think it is incumbent on such a good and benevolent Government as the British, which does so much in divers other ways for the happiness and prosperity of its subjects, to devise and adopt such measures and reforms in the sale of opium and to place such salutary restrictions in its purchase by the people as to mitigate the evils complained of to their minimum. Cannot this end be secured by the sale of opium as a medicine by some recognized medical practitioners? The duty on intoxicating liquors should also be enhanced to such an extent as to almost make its use prohibitive by the poor people, because it is feared the opium-consumers may resort to it as an alternative for opium, which is not so injurious in its effects as alcohol. I have not come across any case of *chandu* or opium-smoking, but from the particulars I have from time to time heard, and the accounts I have read in the papers, of the pernicious and direful results of indulging in this bad habit, it appears to be very necessary that the practice should be discouraged in every way, and that no one should be allowed to smoke opium unless he holds a license for the same from the Government. The shame of publicity and disgrace attaching to one being known as a *Chandubaz* will, I dare say, deter many a man from indulging in this disgraceful habit.

18928. We have had a good deal of evidence before this Commission that persons after the age of 40 or about 40 only begin to take it, and that it is beneficial to them at that age: I should like to know your opinion on that subject?—They take it to sustain their failing nerves and as a preventive for cold and dampness, and so on.

18929. Do you think that is a good practice?—If taken in small quantities by the order of a medical man it is a good practice, because it prevents coldness and damp after the age of 40, when men are old, and require something to assist their failing nerves. Young men should not take it.

18930. But your opinion is that for men under the age of 40 who are in good health it is not beneficial, but actually injurious?—Yes, it is very injurious.

18931. You have said that you think the Government should devise means to restrict the purchase by the people?—Yes.

18932. Would you go so far as to advise prohibition except for medicinal purposes and some provision to meet the case of these persons over 40?—Yes, I have already said

that the use of opium by old men, after the age of 40, if advised by a doctor, should be allowed, but for young people it should be prohibited.

18933. Do you think that such restriction would cause serious discontent and dissatisfaction amongst the people at large?—I do not think so, because they can get the opium on the recommendation of a doctor in case of any illness. I do not prohibit its use as a medicine, but as an intoxicant.

18934. (Mr. Mowbray.) To what classes of doctors would you entrust this power of prescribing opium as a medicine?

Native Doctors, Assistant Surgeons who have passed Government examinations, and some recognised native Hakims and Vaid.

18935. How would you define a recognised Hakim or Vaid?—All those who are known in any particular city. There are three or four Hakims in this city who are renowned Hakims, and if they recommend the use of opium to any man, it should be allowed.

18936. To whom would you give the right of saying that an Hakim was a recognised Hakim?—I should say to the Civil Surgeon, or Assistant Surgeon, of the place where the native Hakim resides.

18937. Have you any experience of the districts outside Delhi?—I was in Lahore for 40 years.

18938. I am not speaking of Lahore: the country districts outside the city?—No, I have never been outside the city.

18939. Have you any idea how many of the people in the country districts ever consult a medical practitioner in the course of their lives?—I am sorry I cannot answer this question.

18940. We heard in Calcutta alone that about 50 per cent. of the people die without ever seeing a doctor at all; and I should like to hear how this large mass of people outside the towns are to obtain opium if they want it under the restrictions that you propose?—I have no reliable information on the subject, but I think Government will not find it impossible to meet the contingency.

18941. You have already told us you have not made a special study of this subject?—Yes.

18942. (Mr. Fanshawe.) In saying that the use of opium by the poorer classes generally leads to misery, I understand you to refer to the poorer classes in towns?—To the poorer classes in towns as well as in country districts.

18943. In the Punjab the main use of opium is by the Sikh community?—By the Sikh community and the Jats.

18944. Is not that community an industrious, energetic and well-to-do community?—Yes.

18945. So that the comparatively general use of opium among that community is quite compatible with the existence of those qualities?—When they take to opium in excess it makes them lose their intellect after a time.

18946. We have had Government figures before us showing there is a large use of opium among the Jats and Sikhs, and you say that this community is a well-to-do, industrious and thrifty one: I ask you whether in that case the general use of opium among this community is not quite compatible with the existence of those qualities?—The men who are well-to-do can afford to get good food to nullify the effects of opium; but generally the poor people cannot get good food, and the excessive use of opium causes a bad effect on their health, whether Sikhs or Mahomedans.

18947. You will recognize that in a question like this we must look to broad results, and I am putting to you the broad results of an opium-eating habit amongst the Sikhs?—My own experience is that the use of opium by the poorer classes, unless they can get food to neutralise its effect, is bad.

18948. You have stated that your experience is limited to towns: and I understand that you have no personal knowledge of the districts?—I have often seen people who have come from the districts.

18949. (Chairman.) You have given us your view as to the effects of the use of opium at various ages. Your evidence is of a general character. There is one point upon which you have not touched, and that is to what extent the habit prevails: do you mean to tell us that it is a widely prevalent habit?—I have already said I have not made the subject a special study, but I think I may safely put down about 3 per cent. of the poorer classes as being addicted to the habit.

18950. You are speaking chiefly of the population in towns?—In towns, and people coming from the districts.

18951. (Mr. Pease.) You say that in the poorer classes men not infrequently starve themselves, their family and children: where have you observed these results arising?—I have seen the results in the city and in people coming

from the country. Their income is hardly Rs. 5 or Rs. 6; and when they have a family of children, it is impossible to make both ends meet—to provide clothing, bread, and other necessities. Opium if taken in excess takes an anna or two out of their pocket, and the result is they have to starve themselves, their wives and their children.

The witness withdrew.

Babu HEM CHANDRA SANYAL called in and examined.

18956. (*Mr. Pease*.) You are a Medical Practitioner and Teacher of Anatomy at the Madrasa Tibbiya, Delhi?—Yes.

18957. How long have you been practising in Delhi, and what opportunities have you had of observing the effects of opium?—Since last 5 years' practice in Delhi I had fair opportunities of coming in contact with people of different castes and grades of society, and enquiring into their habits. I have often seen little babies, only a few months old, given minute doses of opium with the popular belief of preventing cold (*nazla*). I have seen cases where a little overdose has produced untoward symptoms. This habit is for the most part stopped after some time. Some begin in their youth with the idea of increasing the virile power. These young men generally take this in the shape of *majum*. I have often heard them using a preparation called *jalaksyar*, a combination of opium, hemp and *bhang*, the latter ingredients predominating. As the intoxication produced by its use is said to be very pleasant, they become habituated to it. Elderly people affected with chronic cough and cold generally, at the age of 40 years or above, begin the habit at the advice of native physicians or friends. To them it is beneficial. The confirmed eaters and smokers cannot easily give up the habit. If deprived of their usual dose it produces great restlessness and depression. It can be relinquished gradually without any detriment to health. The excessive use in the shape of eating and smoking is confined to the lowest classes of society. The smoking dens should be abolished by law.

18958. Is there a general tendency to increase the dose?—Yes.

18959. What are the results of the habit physically, mentally and morally?—The habitual use of opium-eating, and specially smoking, is very injurious to health. In the young there is no doubt that it shortens the life, and it upsets the digestion, weakens the nervous system. In the low classes men accustomed to excessive eating and smoking, and specially those frequenting the *Chandukhanas*, hardly any person could be found with any sense of morality. They become emaciated and generally die of digestive disturbances. The Government should take strong measures to prevent the extension of this baneful habit.

18960. Do you think opium is of service as a preventive in cases of malaria?—No; in elderly persons, very susceptible to cold due to dampness, it is useful. To the young it is deleterious. The young do not require the aid of opium to get through their daily labour. For the beginners on such grounds it helps for the first few days to work rather by dulling the power of perceiving fatigue, but eventually it engenders the habit of idleness. Only in the elderly persons it acts as a stimulant to their failing nervous energy.

18961. Is the habit of taking opium looked upon as disgraceful?—The habitual use of opium for the purpose of intoxication is surely looked upon as disgraceful. The term *afimchee* is not a compliment. Even those who take it would not like to be addressed as such.

18962. What are your views as to any restriction being placed upon the sale of opium?—The present system of the sale of opium brings opium in easy reach of every person. Opium and its allies—*ganja* and *bhang*—being very cheap tempt most. Hence it tends to increase the number of opium-eaters, etc. There should be a restriction made on the sale of opium except for medicinal purposes. If the sale of opium be limited to medicinal purposes, it is necessary that such a step should be taken.

18963. Necessary that what should be taken?—Some legal steps should be taken. Some law should be made for the sale of opium. The habitual eater should be furnished with a license on which the quantity he can take during a month should be mentioned, and regular registers kept for this purpose. The shops licensed to sell can sell to these persons alone. The authorities should grant the license for sale to the most respectable English and Native druggists. The proprietors of these establishments should be made responsible and subject to penalty for any infringement. They should only sell on the written order from a medical man, either Hakim, Vaid, or a doctor.

18952. Where have you seen this?—In the cities.

18953. What cities?—Lahore and Delhi.

18954. Have you seen many instances?—The proportion may be about 3 per cent.

18955. Of the opium-consumers?—Yes, of the poorer 24 Jan. 1894. classes.

Rai
Bahadur
Gursahai
Mul.

18964. (*Chairman*.) What policy do you recommend in the case of spirituous liquors?—The grounds on which opium is condemned also hold in the case of spirituous liquors, because it has the same baneful effect if taken in excess. A part of the loss of revenue should be supplied by the increase of Excise-tax on spirituous liquors exported from England and other places. Thus, by restricting the sale of opium, we can simultaneously place an obstruction in the path of the spirit-drinking community, which is surely on the increase. If a small portion of the loss of revenue be levied by taxation on liquors exported from outside, there will be a rise in the price of liquor, so that it will be rather dear. The liquor generally consumed in these places is of inferior quality. Ordinary persons will then not be able to get these liquors.

18965. (*Mr. Fanshawe*.) I understand you are a Bengali: is that so?—Yes.

18966. Did you take your degree in Calcutta?—Yes.

18967. Then your family does not belong to this part of the country?—No.

18968. I may take it, therefore, that the views you express are founded on your 5 years' experience in this city?—In this city.

18969. You have spoken of elderly people taking opium as a protection against cold and damp: is it also in your experience that they take it to sustain failing powers at the age you mention?—Elderly persons when their nervous energies are exhausted take little doses of opium, especially in the evening, after the fatigue of their daily work. They have also to work for some time in the night.

18970. Are the cases of excessive use of opium, speaking generally, few or many in your experience?—In small doses you will find many elderly persons taking it, but not so many taking excessive doses.

18971. The moderate use of opium is the more common?—More common than the excessive use.

18972. You have referred to the habitual use of opium being regarded as disgraceful: do you mean the habitual excessive use?—If habitually used for intoxication.

18973. (*Mr. Haridas Veharidas*.) Perhaps you know that alcohol is expressly prohibited by the Hindu religion?—Yes.

18974. Opium is not?—No.

18975. If you say opium should be allowed only for medical purposes (human nature desiring some kind of stimulant), would not the Hindus take to alcohol, even though it be against their religion?—It is my experience that whether the Hindu religion allows alcohol or not, the alcohol-drinking community is daily increasing. There were only one or two spirit shops in Delhi 7 or 8 years ago: now there are about five or six.

18976. Would not the drinking of alcohol further increase if opium is stopped altogether as a stimulant?—I do not think it is necessary that people should take opium without any reason. There should be some law made to stop these injurious habits.

18977. You know that alcohol is taken as a stimulant and most people desire a stimulant: that being the case, if opium is stopped altogether except for medical purposes would not the use of alcohol increase, and is not alcohol more injurious than opium?—We must put obstacles in the way of both alcohol and opium.

18978. It should be done simultaneously?—Yes, otherwise there will surely be an increase. If one thing is stopped, there is a tendency to the other.

18979. (*Mr. Mowbray*.) Were you in practice anywhere else before you came to Delhi?—I was for two years at Jubbulpur, Central Provinces.

18980. Have you any experience of the country districts outside the town?—None.

18981. You say in one of your answers "opium being very cheap": do you mean that the present system of selling opium makes opium cheap?—I mean comparing it with liquor.

Babu Hem
Chandra
Sanyal.

Babu
Hem
Chandra
Sanyal.

24 Jan. 1894.

18982. Can you tell me what the present retail price of opium is in Delhi?— $2\frac{1}{2}$ *tolas* a rupee, but I cannot say exactly.

18983. Are you aware that the price which the Government pay to the cultivators is Rs. 5 a seer, and that the price at which the Government supply it to the licensed vendors is Rs. 16 per seer: do you think that tends to make opium cheap?—The thing is this, $2\frac{1}{2}$ or 3 *tolas* a rupee might be very dear; but a pice worth of opium is sufficient to intoxicate a man while he would require at least 6 to 8 annas worth of country wine to intoxicate him. So when a man can only afford a pice, he has a tendency towards opium.

18984. You mean to say opium is cheaper than spirits?—A pice worth of opium will have more action than a pice worth of wine. I mean comparing the two.

18985. Do you mean to tell me that a pice worth of opium will intoxicate anybody?—Yes; perhaps kill a man.

18986. Have you personally seen that?—I have not myself taken opium, and cannot say.

18987. I am not speaking of what you have taken yourself; have you ever seen a person who has taken a pice worth of opium and was intoxicated?—Yes, many times.

18988. A pice worth?—Yes, many times.

18989. You say that opium should only be sold on the written order of a medical man, either Hakim Vaid or doctor: would you entrust it to all Hakim and Vaid?—No. The local authority should select and grant licences to the doctors, Hakims, or any other person they wish to select.

18990. What do you mean by the local authority?—I mean, for instance, the Deputy Commissioner of this place.

18991. You would allow the Deputy Commissioner to grant a special degree in medicine: that is what it comes to?—No. That such persons are fit. Doctors licensed by a

medical college, of course, have the full authority, but there are no colleges and schools from which Hakims and Vaid can obtain authority. There are famous Hakims and Vaid here, and they should have the power.

18992. (Mr. Fanshawe.) You have spoken of the use of *majum*; is not *majum* prepared from *bhang* or hemp?—*Majum* means confection.

18993. As the term is ordinarily used, does it not mean a preparation from *bhang* or hemp?—*Majum* is mostly *bhang* mixed with sweets. There are certain *majum* containing opium, and certain *majum* containing *siramonium* seeds.

18994. But in all cases the main ingredient is *bhang*, is it not?—In some cases.

18995. (Mr. Wilson.) Do I understand that you are in favour of some measure of considerable prohibition as regards the common sale of opium?—Yes.

18996. Is it your opinion that such a step would have the approval of the public at large?—The public will approve. I do not like that my son should take opium, and such is the case with other persons too. If there is some restriction in the path of my child getting opium that will be more favourable to my views.

18997. You have used the expression that "the discerning public" would favour the adoption of this measure; but I want to put it to you that a great many people can hardly be called discerning: do you think that the people at large would approve such a measure?—By "discerning" I mean those persons who do not take opium as an intoxicating thing. Non-discerning I consider those who belong to the lowest class and take opium in excess. Opium is a very common domestic remedy here in cases of sore eyes, sprains, dysentery, etc.; so that if it is altogether stopped, and they are unable to obtain the drug for medical purposes, there will be a hue and cry.

The witness withdrew.

Babu
Kedar Nath.

Babu KEDAR NATH called in and examined.

18998. (Mr. Wilson.) Are you a Pleader?—Yes.

18999. Have you had 20 years' experience?—Yes.

19000. Amongst Hindus and Mahomedans?—Yes.

19001. What is your opinion of the effects of opium?—As a medicine, opium is very useful. But a habitual use of it is injurious—physically, mentally and morally. It makes one weak and feeble. It impairs the powers of the intellect and produces a bad effect on the nervous system. The use of opium necessitates additional expense by requiring good, nourishing food to keep one up. It is not a protective against fever, though the opium-consumers possibly believe it to be so. Working men generally can get through their daily toil without the use of opium, but those who are addicted to it become restless when they do not get the dose of opium at the proper time. A man who is known to be addicted to the use of opium is not considered very prudent unless he uses it medicinally. A register of habitual opium-consumers should be kept to supply them with the quantity of opium they are habituated to take. Except in very small quantities, opium should be supplied when prescribed by a medical practitioner, whether a doctor, Vaid or Hakim. There is a general tendency to increase the dose of opium. I would not recommend the prohibition of the cultivation of the poppy, unless satisfied that no additional taxation, however slight, will be imposed, directly or indirectly, upon the people of India. The habit of taking opium can never be easily relinquished.

19002. You are strongly against the imposition of any fresh taxation?—Yes.

19003. If that could be avoided you would be in favour of the prohibition of the common sale of opium?—Yes.

19004. Do you think opium ought to be available for medicinal purposes, but that its common use by persons in health is objectionable?—Yes, except in small quantities, because there are some people who, although not suffering from any disease, take it as a protection from nervous exhaustion, and so on. In their case I would recommend a supply of a very small quantity.

19005. You mean that it is objectionable in the case of young persons?—Yes, up to the age of 40 or 45.

19006. Suppose there was prohibition of that kind, or some restriction such as you have indicated, do you think it would give rise to any serious discontent or any kind of political trouble?—No, I do not think it would give rise to political trouble, but it would give rise to discontent to some extent.

19007. Amongst the present consumers?—Yes.

19008. But those who are not consumers would approve?—Yes; they may approve.

19009. (Mr. Fanshawe.) When you speak of the habitual use being injurious, you mean, I understand, the use in excess?—Yes, certainly.

19010. Are cases of excess common or not?—No, I do not think they are common.

19011. And in your medicinal use you include the use by elderly men to sustain failing powers?—Yes.

19012. As regards discontent, have you sufficient knowledge to speak of the general feeling in the Punjab on that subject, do you think?—My experience is confined to Delhi.

19013. Then in speaking of discontent you would wish your views to be limited to the city of Delhi?—Yes.

19014. Do you think there would be any general feeling on the part of those who are not consumers in favour of, or against, the prohibition of opium except for medical purposes?—I do not think they would be against it.

19015. They would not be against prohibition?—Yes.

19016. (Mr. Mowbray.) Would you go a step further? Do you think there is any general desire on the part of the people who do not consume opium themselves to see the sale interfered with?—I cannot say that.

19017. You are quite clear that if the prohibition to the consumers led in any way to an increased taxation on the non-consumers, the non-consumers as well as the consumers would object?—Yes.

19018. With regard to the supply of small quantities: those, I understand, you would allow to be supplied without a medical prescription?—Yes.

19019. Have you ever thought out the practical, legal difficulties, as a lawyer, of a shop being allowed to supply small quantities for people who said they wanted it for some particular purpose, whilst a general law prohibited the sale except on a medical prescription: do you think it would be practicable to make that distinction?—If a license were granted to a respectable man, and some care taken, I think there would be no difficulty.

19020. It comes to this: you would have to be careful in selecting the men, and trust to the discretion of the men in whom you entrust the power?—Yes.

19021. Your 20 years' experience is as a Pleader?—Yes.

19022. (*Mr. Wilson.*) I understood you to say that by the habitual use of opium you meant the use in excess. Of course the habitual use does not necessarily mean use in excess. I want to understand exactly what you mean?—If you take it simply in small doses, and you have a strong constitution, I do not think it will be injurious mentally, morally or physically, because there are lots of persons who, for the sake of keeping their nervous power, use it in very

small quantities. I do not think it is injurious in any way to them. But if excessive quantities are taken, of course it brings on moral, physical and mental bad effects.

Babu Kedar Nath.

24 Jan. 18. 4.

19023. Were you referring to persons under the age of 35 or 40, or to persons above that age, or both classes of persons?—In excessive quantities I think I would attribute it to both classes at the age of 35 or 40, or after.

19024. You mean both?—Yes.

The witness withdrew.

Babu GIRDHARI LALL called in and examined.

Babu Girdhari Lall.

19 25. (*Mr. Mowbray.*) I believe you are a Pleader?—Yes.

19 26. For how long?—Eleven years.

19 27. In Delhi all the time?—Yes.

19028. Are you a native of Delhi?—Yes.

19029. Would you kindly tell us what you have to say with regard to the question under our consideration?—My experience has been generally amongst the Hindus, and to a certain extent among the Mahomedans. Opium-eating or drinking is prevalent chiefly among the lower classes, but not much among the middle classes. Opium-smoking is prevalent among the lower classes, very little among the middle classes. When taken medicinally, it is useful in so far as it is a remedy for the disease. But when taken in excess and continued long, it shatters the constitution and produces a bad effect on the mind and the morals. Its effects are extremely bad when it is taken for sensual purposes. I have never found any person taking opium as a preventive against fever. Opium may help those working people to get through their daily toil who are addicted to it. Those who are not addicted to it never resort to opium with a view to get through their work. The habit of taking opium is looked upon as disgraceful. There is a popular song, which may be thus translated, "The opium-consumer says, I have not taken food, send for milk and cream worth an anna. Even his wife keeps her bed away from him. He is lying alone dozing." It is desirable to prohibit the sale of opium, except for medicinal purposes. Special provision should be made for those who are habituated to the use of the drug. I am not prepared to advocate the prohibition of the growth of opium. The additional burden of taxation may fall upon the people of India. Should it however be found practicable to take such a step without throwing additional burden upon India, special measures should be taken that unworthy people do not take advantage of the prohibition to get somebody into trouble by putting surreptitiously opium into his possession. Should it be impracticable to do so, steps should be taken to restrict the sale of opium by increasing its price, so that there may be no loss of revenue, and the consumption of the drug may decrease.

19030. Have you given any special study to this question, or is what you have stated merely your general opinion?—I have not given special study to the matter.

19031. I suppose you realize the fact that if you restrict the sale of opium very much by increasing its price, there is likely to be a loss of revenue?—I think it may come to be equal to it. Opium is sold at about Re 1 for 3 or 3½ tolas; if it is sold at Re. 1 a tola the use will be certainly less.

The witness withdrew.

SYAD NASIR-UD-DIN MAHOMED ABU-AL-MANSOOR, IMAM-I-MUNAZIRA, called in and examined (through an interpreter).

Syad Nasir-ud-din Mahomed Abu-al-mansoor, Imam-i-Munazira.

19040. (*Mr. Mowbray.*) What are your qualifications and who are you?—I am the author of the *Commentaries on the Koran* (Tabjil-ul-anzil), the *History of Jerusalem*, and some fifty works concerning the vindication of the principles of Islam. My age is nearly seventy. I am a landed proprietor in Oudh.

19041. Will you give us your opinion with regard to opium and alcohol?—I am of opinion that opium is more condemnable than alcohol from the point of view of our religion, because, whereas alcohol is prohibited by our religion on account of its being an intoxicant, opium is forbidden not only as an intoxicant but as a poison also. All the books of Hadis prohibit the use of intoxicants. It is written in *Tirmizi*, *Abu Dawud* and *Ibu-i-Maja*, which are the books of Hadis, that even a particle of what intoxicates when taken in excess is *haram* (prohibited and condemned by religion).

19042. What is the opinion of the people in India with regard to the consumption of opium?—There is no section of communities in India which does not regard an opium-consumer as disgraceful. It is undeniable that a habitual opium-eater and smoker loses all the qualities of manhood and becomes utterly worthless. Most of them become lazy, timid and indolent. They devote themselves neither to trade nor to any other occupation.

19043. What, in your opinion, are the results of the habitual use of opium? Its habitual use is very injurious. It makes a man pale, lean and emaciated. It makes him stupid. His appearance is always gloomy. He is very easily frightened. His powers of bearing and vision are impaired.

19 44. (*Mr. Haridas Veharidas.*) You say that opium is more condemnable than alcohol from your religious

Syad
Nasir-ud-din
Mahomed
Abu-al-
mansoor,
Imam-i-
munazira.

24 Jan. 1894.

point of view. If that is the case, why is it not expressly prohibited as alcohol is?—The reason is this: at the time the Koran was revealed opium was not in use in Arabia. Again, if all the intoxicants were mentioned there it would lead to a prolixity: therefore there is a general verse forbidding all intoxicants. In the Koran only alcohol is expressly mentioned; other intoxicants are not mentioned.

19045. What you say with regard to opium is your own version?—It is included in intoxicants, although it is not named there.

19046. Is opium useful as a medicine?—It is mentioned in the Hadis that there is no recovery in things which are prohibited.

19047. Opium is used as a medicine where the Greek system has been adopted?—Its use is not lawful. As many unlawful things are in vogue, so this is one of them.

19048. Is alcohol mentioned in Greek books as a medicine, in like manner as is opium mentioned?—They are two distinct things. The Greek system of medicine is one branch; the law of the Prophet is another thing.

19049. I believe you have studied books on the system of the Greek medicine?—Yes.

19050. Is opium mentioned as a medicine, and is alcohol also mentioned as a medicine in those books?—Yes, opium is mentioned.

19051. Is it used among the Mahomedans as a medicine?—They do not generally use it, but they can use it when it is prescribed by doctors.

19052. (Mr. Fanshawe.) Are you a Sunni?—Yes.

19053. Is it not the case that the Hadis accepted by the Sunni sect are not necessarily accepted as authoritative by the Shiah sect?—Whatever I have said about opium is a thing which is agreed upon by all the Shiahs and Sunnis.

19054. I wish to know whether the Hadis, which are accepted as authorities by the Sunnis, are equally accepted by the Shiahs?—The Shiahs have separate books of their own; but even the Shiahs do not consider the books as accepted by the Sunnis unauthoritative.

19055. Is it not the case that there has been a good deal of controversy on the point whether opium is allowed or not under the Mahomedan law, and that various opinions have been expressed on the subject by different Moulvis or doctors?—I have stated these things which are binding on all; they might have expressed their own individual views.

The witness withdrew.

LALA PYARI LAL called in and examined.

Lala
Pyari Lal.

19066. (Chairman.) What have you to say with regard to the subject which has been referred to this Commission for inquiry?—I am a Pleader. I have had experience amongst the Hindus and Mahomedans in general. Opium-eating is prevalent amongst the Hindus and Mahomedans, but chiefly among the lower classes. Opium-smoking in the form of *chandu* is also prevalent amongst them. When taken as a medicine it produces no harm, but when taken in excess it produces physical and mental deterioration. It does not necessarily lead to vices. I have never come across a man who believed opium to be protective against fever, nor do I believe that it is. It is not especially useful in malarious districts. Habitual consumers cannot do without opium, but ordinary working people can. Medicinal use is not looked upon as disgraceful, but *afimmi* is a term of contempt and disgrace, and signifies a drowsy and lazy fellow. Opium should not be sold without a certificate from a recognised medical practitioner. It will be desirable to keep a register of habitual consumers with a view to make especial provision for them. There is a general tendency to increase the dose.

19067. Would you recommend the same prohibition for opium as you would for alcohol?—Yes. I recommend prohibition against all liquor.

19068. (Mr. Fanshawe.) How long have you been a Pleader?—Since January 1880.

19069. Has your practice been entirely in Delhi?—Yes; Delhi is the centre of my practice.

19070. You speak of opium being taken as a medicine: do you include in that the use by people who, so to speak, take it on their own prescription?—Strictly it is not medicinal use, but it may be called medical use; it is used to cure a malady.

19056. Has there not been a good deal of controversy, and have not different opinions been expressed?—There are things which have been acknowledged by all, and they can admit of no dispute or discussion.

19057. Is it not the case that many orthodox Mahomedans in this country consider the use of opium permissible?—Nobody considers it lawful, although they may use it.

19058. We have been told by a number of Mahomedans in Calcutta and elsewhere that a large body of Mahomedans in this country do consider the use of opium permissible?—That is their own individual opinion.

19059. In speaking of all sections of communities regarding opium-consumers as disgraceful, do you mean opium-consumers in excess, or opium-consumers in moderation?—Such use as impairs the intellectual powers of a person.

19060. (Mr. Moubray.) Do you hold any official position amongst the Mahomedan community at Delhi?—I am Imam-i-munazira, not only in old Delhi and in India, but other countries.

19061. Will you explain what that is?—Umpire of controversies. Any controversy which has any bearing on a point of learning with regard to Mahomedan literature will be decided according to my decision. I can produce statements in which all have declared and acknowledged that I am the imam. They are in Arabic and Persian.

19062. (Mr. Wilson.) I wish to know, as a matter of fact, if there has been considerable discussion amongst the learned men and doctors in Theology of the Mahomedan religion as to whether opium is forbidden or not?—I am not aware of any controversy. All agree that it is unlawful. I am not aware of any controversy or discussion in which the question has arisen whether it is lawful.

19063. Are you in any way whatever in communication with, or under the influence of Christian Missionaries with regard to this subject?—I have had no talk on the subject with the Missionaries. Whatever I have stated is from books of law: I have no concern whatever with the Christian Missionaries.

19064. You have used the word "intoxicant." I want to know exactly what you mean by "intoxicant"?—Anything which impairs the intellectual powers or disturbs the reason.

19065. Do you mean by *nasha* that it is exhilarating and elevating, or do you mean that it is stupefying?—Everything which depresses exhilarates first.

19071. Some people take it in older age to sustain failing powers and as a protection against cold?—I do not believe in that.

19072. I take it, you would not include that in your medical use?—No.

19073. In saying that the term *afimi* is a term of disgrace and contempt, do I understand you to mean that this refers to the excessive use of opium?—Yes.

19074. (Mr. Haridas Veharidas.) Would you call the application of opium for some pain medical use or not?—If it were prescribed by a doctor it would be medical use.

19075. Supposing I got a pain and applied it and did not go to a doctor?—It might do you harm all the same; perhaps it might not be a remedy for the pain.

19076. Would you not call that medical use?—No.

19077. (Mr. Wilson.) You have not stated whether you would be in favour of a system of prohibition of the general sale of opium as it is now sold?—I would only recommend the sale of opium on medical prescription.

19078. Do you think that some proposal of that kind would receive the general approval of the people of Delhi?—I cannot say it will receive general approval, but it will not be disapproved of.

19079. By general approval I do not mean unanimous approval; do you think the great mass of the people would approve of such a prohibition?—I am not prepared to say that.

19080. Do you think it would be a good thing that such prohibition would be desirable, even though the people were not in favour of it?—I think it would be good; children are often killed by their mothers from an overdose of opium. The mothers give it to their children to keep them quiet.

It sometimes happens that an overdose is given and the child is killed. Women and young men when they want to commit suicide generally take opium. It is the most available poison that can be obtained in a large quantity.

19081. In your opinion the people have no objection to having their names placed on a register in the way you

The witness withdrew.

SHAIKH HAFIZULLA called in and examined (through an interpreter).

19082. (Chairman.) I believe you are an Honorary Magistrate and Municipal Commissioner of Delhi?—Yes.

19083. For what purpose is opium generally used?—For the protection of life; opium is generally used by old men and women in the belief that it is a preventive in the case of catarrh, but I am unable to give details of the persons using opium, or of the quantities so used by each of them.

19084. There are some who believe that opium-eating is a vice, are there not?—Excessive opium-eaters are looked upon as indulging in a vice.

19085. Do you recommend interference by the Government with a view to restriction being placed on the use of the drug?—I recommend it.

19086. Will you give your reasons?—It is a dangerous article to have in one's possession, and is often used as a means for committing suicide, as experience has shown. Looking to its use from a medical point of view, it is injurious to health when taken in big quantities, and we always see great eaters of opium pale, thin and humped.

The witness withdrew.

MR. J. PRESCOTT HEWETT, Secretary to the Commission, called in and examined.

19093. (Chairman.) I believe you have received certain petitions which have been addressed to this Commission?—At different times during the tour of the Commission I have received direct, or addressed to the Chairman, a number of petitions in the vernacular. I now beg to place the translations before you. The first is from the ryots of the villages of Koir, Purwa, Nadauna, Pertap, Sagar, Parari, Dulsagar, Chandawan, Dhakaeeh, Dhairahru, Barssu, Bhatwalia, Kulharia, Basonti, Nethua, Bohsa, Sodhila, Jugdipur, Mahilla, etc., etc., of Parganas Bhogpur and Choura, Sub-division Buxar, District Shahabad, and is to the following effect:—

"We grow poppy for Government under compulsion. Before this we used to sell poppy juice to Government at the rate of R3-8 per seer (80 lb), but now the Government takes the juice dried up into opium and pays R5 and R5-12 per seer (80 lb). A seer of opium taken from us at present is prepared out of 5 or 6 seers of juice, i.e., we now get from R5 to R5-12, instead of R14 to R21 which we used to get formerly. The total cost per bigha in cultivation of poppy is from R65 to R80 as detailed below:—

	R a.	R a. p.
Manure; coolie wages	5 0	5 0 0
Wages of 5 or 6 laborers in levelling fields and their beds	0 14	1 2 0
Poppy seeds, 5 or 6 seers	0 8	0 10 0
Irrigation expenses from 7 to 9 times at R1-2 each time	14 14	19 2 0
Cost of weeding 6 to 7 times, 120 men	7 8	7 8 0
Tapping of poppy, 100 to 150 men	7 13	8 9 2
Rent of <i>Gurastha</i> lands	6 0	10 0 0
" " <i>Shikami</i> lands	20 0	20 0 0
Expenses of <i>lumbardar</i> , etc.	1 0	1 0 0
TOTAL	65 10	86 9 2

"We get only R26 or R35 per bigha for opium and leaves, etc., as detailed below:—

	R a.	R a.
Opium from 2 to 4 seers at R15-12 a seer	11 8	23 0
Leaves, one maund, at R0-6 per maund	0 6	0 6
Flowers (<i>Puttul</i>) up to 5 seers at R0-4 per seer	1 4	1 4
<i>Pasawa</i> up to 1 chittack at R2-8 per seer	0 10	0 10
Opium seed, 3 to 4 maunds at R2 a seer	6 0	8 0
TOTAL R10-14.	19 12	23 4

have suggested?—I cannot say what their feelings would be. There would be a restriction, and they might not like it. I should like to add that I am not in favour of the deficit arising from the abolition of opium revenue being made up by additional taxation.

Lala
Pyari Lal.
24 Jan. 1894

Opium-eaters require wholesome and rich food, which poor people cannot afford. It would be the ignorant people who would not like Government interference.

19087. Has the Government closed all the *chandu* and *madak* shops here?—No, not all.

19088. Are the people disposed to accept any additional tax to compensate for the loss of the opium revenue?—They are not prepared.

19089. (Mr. Wilson.) Are the people expecting prohibitive measures?—Yes, against excessive use. People are expecting that Government will interfere to restrict its being sold in big quantities.

19090. Do they approve of that?—Yes.

19091. (Mr. Fanshawe.) You are an Honorary Magistrate and a Sunni Mahomedan of this town?—Yes.

19092. Can you tell us whether Mahomed Abu-al-Mansoor, Imam-i-munazira, who has given evidence to-day, is accepted as an authority among the Sunni Mahomedans in this town?—Not generally.

Shaikh
Hafizulla.

"It will appear from the above that in growing poppy on *Gurastha* lands our loss amounts to R40 to R50 per bigha, while in *Shikami* lands the loss is much greater. We have now fallen in debt and are in great misery. For extraction of opium the fluid opium is dried on pieces of cloth which is termed *kaffa*. The *kaffa* of two or three years is considered useless by the Opium officers and is destroyed, and nothing is paid for it. This is very hard, for when by mistake a *kaffa* is left in our houses and subsequently discovered we are prosecuted and fined. We several times filed petitions praying for exemption from opium cultivation, but instead of our request being granted we are compelled to grow poppy. There is no gain to us in poppy cultivation. We can gain more if we grow other things on the fields on which poppy is grown. Our prayer is that the poppy cultivation be altogether abolished, or the rate which the Government pays for opium be raised to R15 per seer, for which we shall ever pray."

The petition is signed by 114 persons.

The next petition is a petition addressed to the President of the Royal Commission on Opium, signed by the opium cultivators of about 31 villages situated in Parganas Bhojpur and Choura, Sub-division Buxar, District Shahabad. It is practically the same as the previous petition.

The next is a petition from the ryots of Mouzas Arrah, Karmantola, Dharhara, Begumpore, Thakuri, Kulhari, Ramgudh, Nawada, Anaith, Pakri and others of Pargana Arrah in the District of Shahabad.

The petition runs:—"That the rate at which the price of opium is given to your petitioners is very low in consideration of your petitioners' labour and expenses, and thus they make no profit; that the price of opium given to your petitioners is very low, while the labor and expense it takes is very great; that instead of making any profit your petitioners are gradually being reduced to poverty. Had your petitioners not laboured in the cultivation of poppy with wives and children, and had your petitioners not been growing other crops than poppy, they would have been ruined; that your petitioners grow poppy under compulsion, and when your petitioners endeavour to resign the business, the prayer is refused, though your petitioners are quite prejudiced against the poppy cultivation; that after a full enquiry into the matter justice be shown to your petitioners, and that as your Honor has visited the place in connection with the opium question, this humble representation is laid before your Honor for consideration."

This is signed by 200 persons.

The third petition is from the ryots in Behar, signed by 50 persons. It is as follows:—

Mr. Hewett. "Honored Sir,—Having come to know that your Honor has come here from Calcutta to hear our grievances in connection with poppy cultivation, we beg most respectfully to submit, for your Honor's information, that we have to undergo great trouble in growing poppy and are always put to great losses. Previously, the Opium Agent used to accept fluid opium or juice at the rate of R3 or R3-8 per seer, while the yield per bigha amounted to 36 seers. At that time we used to make some profits. Now the Opium Agent does not receive the juice but solid opium called *Doudha* at the rate of R5 per seer, although a seer of solid opium is made of five or six seers of juice. We grow opium only as we fear zilladars and opium peons. The cost per bigha incurred by us amounts to R12 or R13. Thus we lose R2 or R3 per bigha. Advances are made to us by zilladars through lumbardars per force; the zilladars also induce us to grow poppy. Under the circumstances, we pray that it may please your Honor to direct the Opium Agent to receive from us the juice at R3 or R3-8 per seer as formerly, or exempt us from poppy cultivation from next year for which act of kindness we shall ever pray for your Honor's long life and prosperity."

The next is a similar petition signed by 22 persons, who are cultivators in 8 villages in the Shahabad District. The petition is as follows:—

"Learning that your Honor has come here from Calcutta to consider our grievances in connection with poppy cultivation, we, the ryots, beg to submit that we are put to great loss by cultivating poppy. The *malik* also levies high rates of rental for the fields in which poppy is grown. Formerly, the Opium Agent used to receive juice at R3-8 or R4 per seer, while the produce amounted to 40 or 42 per bigha. At that time the cultivation of the poppy was profitable to us. Now the Opium Agent receives solid opium at R5 per seer, although a seer of solid opium is made of 5 or 6 seers of juice. We grow poppy through the fear of zilladars and peons. We have to incur a cost of R40 or R45 per bigha in growing poppy, and thus we spend R3 or R4 in excess of the value paid to us. The zilladars make advances to us by force through lumbardars. As we are put to great loss by growing poppy, we beg that it may please your Honor that fluid opium or juice may be accepted, or that we may be exempted from growing poppy; for which act of kindness we shall ever pray."

There are three other petitions from cultivators, all in exactly the same words. One of these petitions comes from Anohārwāra, Pargana Ballia, signed by 57 persons; the second is from Firoznagar alias Moria, Pargana Sada; and the third from Kalianpur-Mau, Pargana Shāmāhe—all in the Patna district. They merely say that the petitioners do not benefit by the cultivation of opium, but, on the contrary, lose by it. They would be entirely bankrupt if they depended upon the cultivation of opium only. They are compelled to cultivate opium: they should be paid at a higher rate for cultivating it.

The next is a petition from the residents of Umballa. It is as follows:—

"We have been informed that it is proposed to abolish opium, and it is said that the use of opium causes harm to the human body and human life. We do not expect to be called up before the Commission, as only notables will appear before it, but we beg to say that such men know nothing about the use of opium, and it is superfluous to take their evidence. To take the evidence of such men is the same as to examine Mahomedans regarding the construction of the Hindu temple. Regarding the use of opium, only those should be examined who are addicted to the use of it. Opium is taken from half a *ratli* to 3 *mashas* a day, and its cost is from one-fourth of a pice to one or one and-a-quarter anna per diem. If we were to leave off opium and take to liquor, it will cost us from eight annas to two or four rupees a day; even then we shall not have the same powers of endurance as with opium. Before the system of granting licenses for cultivation or sale of opium was introduced people used to take even two or three *tolas* a day, but even then no harm of any kind was caused to them. The Government rule making it criminal to keep more than three *tolas* of opium inflicts a great hardship, and people have been obliged to reduce the quantities taken daily, and now those who take opium are either those who are already addicted to the use of it, or those who suffer from some disease. It is a false theory that opium produces harm. On the contrary, it cures a number of diseases, and those who do not take the drug remain victims to those diseases. It is also a false theory that those who take opium are unable to work hard. It is well known

that the use of opium creates great powers of endurance. If opium be abolished we will be compelled to go to those places where it may be procurable, otherwise we will be victims of hundreds of diseases."

The petition is signed by 442 persons.

The next petition is also from residents of Umballa, and is as follows:—

"We have heard that a Commission has been appointed to abolish opium. We beg to say that our very life depends on the use of it. We are poor people and support ourselves by manual labor, and we are so much addicted to opium that if we were deprived of it we would be unfit for any manual labour or service. We have also heard that notables will be summoned and examined. We humbly beg to submit that the stoppage of opium will prove our ruin, and we will be even deprived of our lives."

The petition is signed by 358 persons.

There is a third petition from the residents of the Umballa District, in the following terms:—

"We have heard that a Commission has been appointed by the Government to make arrangements about the cultivation of opium. We beg to make the following representations. In our part of the country the cultivation of opium confers immense advantages on zamindars. We have long been addicted to the use of it, and are protected against many diseases by the use of it. We do not think that the Government will give up the revenue which it gets from opium, and therefore, if the cultivation of opium be abolished, it will be necessary to impose some other tax upon us. We are not at all agreeable to pay any such tax, and we pray that the cultivation of opium may not be interfered with at all."

The petition is signed by sixty-three persons.

The next petition is from the residents of Shazadpur, in the Umballa District, and is signed by 35 persons. It is as follows:—

"We, the people of this place, use opium only to cure diseases, etc., not as an intoxicant. Opium acts as a great palliative in diseases, and we are able to work hard with cheerfulness under its influence. No one who is addicted to opium has ever wasted property. We derive the following advantages by its use: it acts as an anodyne; it gives us a good appetite; it acts as a sedative; it removes nervousness; it is a good antidote to fatigue; and it improves the intellect. If we be deprived of opium we will suffer the following disadvantages: we become victims to diseases for which it is a prophylactic; we become unfit for work; we lose our appetite; our bodies become lethargic; we are unable to travel; our intellect becomes impaired. We pray that the Government will be mercifully pleased to consider the use of opium as an absolute necessity for us. The abolition of opium will not only ruin us and lead us to the grave, but will entail a loss to the Government in the shape of opium revenue to the extent of lakhs of rupees."

The following petition is from the residents of the Pipli Tahsil in the Umballa District:—

"In our part of the country poppy is very largely cultivated, and it is on the cultivation of opium that we depend for the payment of the Government revenue for the spring harvests and for our other domestic expenses. The income from other produce is very limited, whereas opium yields us a handsome income; so that no other produce comes up to it. The large yield of opium was taken into consideration when the revenue of our villages was fixed at the recent settlement. If the cultivation of opium be stopped, we shall be ruined, and the Government will be obliged to revise the assessment of revenue."

There are 12 signatures to the petition.

The next petition is from zaildars, lumbardars, etc. of Muktesar in the Ferozepur District, and is signed by 26 persons. It is as follows:—

"We, the undersigned zaildars and lumbardars of Muktesar, beg to say that the stopping of the use of opium for opium-consumers is very hard and troublesome. Opium does not do any harm to those opium-eaters who can afford to have substantial food. There are many advantages attached to opium-eating. In this country canal water is used for drinking purposes, and opium acts as a preventive for *Bani Lag*, i.e., injurious effects of drinking bad water. It also proves very useful in cases of cold and catarrh. It may, however, be noticed here that Excise contractors mix *rasol*, *kuchla*, juice of *Thuar tree*, *dhilawa*

and sugar with opium, which adulterated with these (native) drugs, etc., proves very injurious to the opium-eater. Hill opium is very useful to eat. Opium known as *Goli-ki-ahm* is very harmful. Excise contractors supply very inferior sort of opium to poor opium-eaters, and it is always adulterated; and that is why opium-eaters who are poor become useless persons. The contract being monopolized by a sole contractor, there is no chance of a competitor coming forward with a better article. The contractor therefore sells opium as well as he likes, and fixes whatever rates of sales he likes, because the opium-eater has no other place to satisfy his wants than the contractor's shop. In British territory contractors sell their adulterated opium at the following rates:—

- (1) *Pukka* opium, 3 tolas per rupee.
- (2) *Kutcha* opium, 4 tolas per rupee.

The witness withdrew.

Adjourned to to-morrow at Agra.

At Agra.

FIFTY-FIFTH DAY.

Thursday, 25th January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.
„ A. U. FANSHAWE.

MR. ARTHUR PEASE.
„ HARIDAS VECHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

The Honourable A. CADELL called in and examined.

19094 (*Chairman*.) I believe you are a member of the Board of Revenue of the North-Western Provinces and Oudh?—Yes.

19095. And Member of the Lieutenant-Governor's Council?—Yes.

19096. You have had long service in India?—I have had over 30 years' experience in India. I was Commissioner of Excise and Stamps in 1883-84 and Opium Agent for seven months in 1887, and I have been Member of the Board of Revenue in charge of opium excise for nine months in 1893.

19097. Would you give the Commission the result of your observation with reference to the opium habit?—I would say that, as far as these Provinces are concerned, there is an important distinction to be made between eating opium and smoking the preparations of opium; the former is looked upon as innocent and reputable, the latter as injurious and disreputable; and the distinction is, I think, fully justified by the effects of the two habits on the people of these Provinces. Opium-eaters are, as far as my experience goes, healthy, well conducted citizens of the ordinary type: while opium-smokers are, if belonging to the upper classes, debauchees, and, if belonging to the lower classes, disreputable persons with a tendency to crime—caused not by any tendency of opium in that direction, but by the irresistible character of the vice, and by the necessity felt to gratify a vice which is an expensive one. I stated my opinion on this subject when Acting Commissioner of Excise, North-Western Provinces, pages 52, 53, 54, 55 of the Excise Report for 1882-83, and have seen no reason to change it to any serious extent.

19098. What do you consider to be the opinion of the people of this part of India with reference to the facilities for the supply of opium for non-medical purposes?—The almost universal opinion of the people of this part of India

In Native States adjoining British territories the rates *Mr. Hewett* are as follows:—

- (1) *Pukka* opium, 5 tolas per rupee.
- (2) *Kutcha* opium, 7 to 8 tolas per rupee.

24 Jan. 1894

Opium of British territories is surely adulterated, whereas that of the Native States is pure. In Native States Hill opium can be had, and *Gola* opium is not sold there; in Sarkari territories *Gola* opium is sold. Opium is a great supporter of laborers who have to work all the day long, and is a very good thing for the old. We are all of opinion that opium is a very good thing if it can be had good; and therefore we present this application.”

I have four or five other petitions from individuals; but I understand that the Commission do not think it necessary to embody them in their proceedings.

(*Chairman*.) No.

is in favour of reasonable facilities for the use of opium for non-medical purposes, but there is also a general feeling among the more respectable classes against opium smoking.

The Hon. A. Cadell.

25 Jan. 1894.

19099. What would you say as to the disposition of the people of India to bear additional taxation in case it should be found necessary in the event of the Government being deprived of its opium revenue?—There is certainly no willingness to bear in whole or in part the cost of prohibitive measures, which only a few people with extreme views desire.

19100. To what extent do you consider the agricultural interest is dependent upon the cultivation of the poppy?—I may say that my experience has been more or less on the fringe of the poppy-growing districts. I have never served in Oudh or in the districts to the east of Oudh, where poppy is most grown. I should like to refer the Commission to those who have had greater experience with regard to those districts, but, with regard to Rohilkhand, Agra and the Allahabad Divisions, I think that the effect of abolition on the revenue, and the rent which at the time of settlement forms the basis of that revenue, has been somewhat exaggerated. As a matter of fact, cultivation has been closed in many places without any result so serious as to require, as far as I know, any special measures of relief. Cultivation is frequently closed, and the closure takes place either on account of the misconduct of the people with reference to excise opium, or in tracts which are the least remunerative to the Department, and therefore those in which opium is least widely and successfully grown.

19101. What would you say with regard to the value of opium as a febrifuge?—One can only represent general opinion, and that is distinctly in favour of opium being a febrifuge and a comforting medicine in a great variety of ailments to which the poor are liable.

The
Hon.
A. Cadell.
25 Jan. 1894.

19102. Can you give us any opinion as to the consumption of opium in these Provinces?—The consumption of licit opium in these Provinces was last year maunds 1,784.6, having increased since 1875-76 from maunds 1,076.2 to maunds 1,451.35 in the North-Western Provinces, and from maunds 1.6-23 to maunds 3.32 in Oudh. This increase is, it is believed, due to better administration rather than to increased consumption, and consumption has been discouraged by a gradually increasing total excise, made up of price of opium and license fees.

19103. Can you give us any information as to the extent to which the consumption of illicit opium is carried? Have you much difficulty in preventing the consumption of illicit opium?—There is a strong tendency to smuggle all over the Province, and we have certainly failed to overcome it in the poppy-growing districts. Prosecutions range from about 600 to 700 in the year. It is very difficult to secure effective punishments, especially from Native Magistrates, and this difficulty suggests the obstacles in the way of prohibition, for the tendency towards light punishments would then become general. And while I hold prohibition to be impracticable and politically dangerous, I am no less of opinion that, from the point of view of those opposed to the consumption of opium, the Government monopoly is the best system of arranging for the production of opium that can be devised. With reference to this, as to other branches of excise, the best service which a friend to temperance can render is to aid in the suppression of the trade in the illicit substitute for the fully taxed article, and if poppy were grown and opium manufactured as indigo is, there would be much greater leakage than at present, although, as things are at present, there is a great deal. At present the excise opium revenue in these Provinces is obtained without the aid of any preventive establishment at all; if the growth and manufacture ceased to be under a Government department, we should either cheapen opium and extend its consumption, or have to maintain a large preventive establishment with the certainty of much friction and the likelihood of a good deal of oppression.

19104. (Mr. Pease.) I suppose you are aware that no proposal has been made before this Commission to substitute any other arrangement for the Government monopoly?—I do not know what has been proposed before the Commission.

19105. (Mr. Wilson.) With regard to the influence of the Opium Department on the prosperity of the agricultural classes, I understand that you prefer to leave that question to those who have more intimate knowledge of the details?—Of particular tracts in the North-eastern districts.

19106. Does that remark refer to what you said about the effect on rents and revenue?—Yes. I have had no practical experience of either rents or revenue in those districts.

19107. You have referred to cultivation having been closed in many places; is that a permanent closing, or are you referring to fluctuations?—To permanent closing. It has been closed in this district (Agra) for example.

19108. Can you tell me when it was closed in this district?—Probably about 1888. I acted as Opium Agent in 1887, and recommended the closure of this district.

19109. On what grounds?—Largely on account of its being unremunerative to the Department; that they wasted an establishment and got but little return. I thought that the establishment could be much better employed in the better producing districts.

19110. Why did they not get a profitable return?—Either because the people were not skilful cultivators or because they smuggled.

19111. Sometimes the outturns brought to the Opium Department were so small that it was scarcely satisfactory?—Yes, I did abolish it in one district, Muttra, the next to this, because I thought the establishment could be more usefully employed elsewhere in the better poppy-growing districts.

19112. You say that a very large increase has taken place in the course of about 18 years, and that that increase is believed to be due to better administration?—Yes.

19113. Can you in any way support that, and show that it is not an actual increase of consumption?—Whenever cultivation is restricted in any district or abolished, the consumption of licit opium goes up. Whenever cultivation is extended or started in any district, the consumption of illicit opium goes down: for example, in Lucknow cultivation round the city was closed some years ago, and I suppose that in Lucknow city there is the greatest consumption in this Province, and it is certain that the consumption of licit opium at once doubled.

19114. In reference to the difficulty of securing the effective punishment of persons infringing the opium regulations,

does the same difficulty exist in regard to other offences—Not to the same extent, I think.

19115. Do you think there is a certain amount of sympathy felt?—I think there is. All the Magistrates, more or less, evince a certain amount of interest in the poor, who merely keep a little back for medical purposes. The cases that I refer to, and that we aim at repressing, are the extensive smuggling cases where a man is found with many seers of opium and is let off with a light fine.

19116. (Mr. Mowbray.) Your experience as Opium Agent in 1887 was in the Benares Agency, I suppose?—Yes.

19117. I rather understood you to say that in those places where cultivation has been closed, it has arisen either from the misconduct of the cultivators, or from the fact that the tracts were not favourable to opium cultivation; but have you any experience of cultivation being closed owing to the indisposition of the cultivators to cultivate?—I do not remember that in my experience. I did close a great deal of cultivation myself after inspection; that was with reference to facilitating excise or on account of the unremunerative character of the cultivation to the Department.

19118. Where the cultivation has been closed, do I understand that it is absolutely prohibited in the district, or would there be a possibility of the licenses being granted again in that district? Is it entirely within the discretion of the Department?—It is within the discretion of the Opium Agent, subject to the control of the Board of Revenue of Lower Bengal; and they are again largely ruled by the Financial Department of the Government of India.

19119. It merely amounts to this, that the licenses have not been granted, and that they can be re-granted?—They could be re-granted.

19120. With regard to the opium-smoking to which you have referred, are you of opinion that the closing of the licensed smoking-houses has been beneficial?—I certainly think that the reduction of the number has been extremely beneficial. In the excise report to which I refer, I proposed that the principle should be laid down, and it was laid down by Government that we should only open an opium-smoking shop where there was a distinct existing demand, and that we should take every possible precaution against encouraging it; that was adopted. They have now gone beyond that and closed altogether, but I am doubtful whether that was desirable.

19121. That is what I wanted to get your opinion upon—the total closing of the shops?—I gave my advice against it.

19122. Will you tell us what your reasons were?—When a man has contracted a vice, it is better that he should indulge it away from his home than in his house. I think it is less likely to spread when it is carried on in a public smoking den than when it is done among his children and relations.

19123. We have been told that since these licensed places for smoking have been closed, a large number of unlicensed dens have sprung up in some of these cities; have you any suggestion to the makers to the feasibility of dealing with those cases, supposing the prohibition of licensed smoking shops continues?—I have only to propose that we should wait and watch, and then after a few years come to some practical conclusion on the subject. I should not have abolished the remaining licensed shops, but having abolished them, I would not restore them too quickly.

19124. (Mr. Haridas Voharidas.) You have said that opium-eating is looked upon as reputable; do you mean that as compared to opium-smoking?—I do not think any discredit attaches to opium-eating. I should think it is about equivalent in public estimation to ordinary moderate drinking amongst Englishmen. But opium-smoking is really held to be about equivalent to excessive drinking.

19125. What would the habit of not taking any opium at all be called?—That is a matter of choice and opinion; very much like absolute temperance with Englishmen.

19126. (Mr. Fanshawe.) When you say that opium is believed to be a febrifuge, and that it is used in various diseases, do you mean that it is used amongst the people as a domestic remedy?—Yes. I may add that in malarious tracts it is a common thing for cultivators to beseech one to allow opium cultivation to be introduced or re-introduced into the district on that very ground.

19127. In saying that opium smoking is considered disreputable, is that chiefly on account of its associations?—No.

19128. Have you any knowledge or belief that it is actually injurious to health?—The experience of officials and non-officials is that it is distinctly injurious.

19129. Because it is carried to excess?—It is very hard for one to say that; I may say I have not changed my opinion since I wrote my report for 1882-83, and in which I dealt in detail with the question.

19130. (Chairman.) Have you those passages at hand?—Yes. I then wrote—“*Chandu-smoking (madak)* may be left out of consideration, for it is little known in these Provinces) is held by all, whether Europeans or Natives, officials or non-officials, who are interested in the social aspects of excise questions, to be by far the most hurtful practice with which this Department has to deal, and it is matter for surprise that the benevolent persons, who blame the action of Government with reference to the liquor trade, have not interested themselves in the far more acute evil of *chandu-smoking*—a vice of comparatively recent origin, which has made considerable way in these Provinces, and is held by some to be making rapid progress. And I think that the experience of most officers confirms the views to which every Native gentleman of intelligence and position, with whom I have spoken on the subject, gives expression. Most of us can remember officials and servants, generally respectable and efficient, who drank in moderation and occasionally to excess, or who ate opium; but I at least can recollect no *chandu-smoker* who has not been ruined by the vice as an official and as a man. The chief evils of the vice are, that it ruins the constitution; that it becomes an irresistible habit with which the practiser is unable to contend, and for the gratification of which he is willing to make any sacrifice.” Further on I wrote—“And with reference to so baneful a drug, the arguments against an undue increase in the number of shops, used with reference to the liquor traffic, apply with increased force. It is no part of the province of Government to open a *chandu* shop on the chance of a demand arising. The shop should be established only to meet a considerable existing demand, and where this does not exist it should be closed.” They had been reduced, and they have now been entirely closed.

19131. (Mr. Fanshawe.) We have been told that poppy cultivation is carried on, more or less, under compulsion on the part of the officials of the Opium Department; do you consider it possible that there can be anything in the nature of general compulsion on the part of the officials of that Department?—No. I think it is absolutely impossible. There was a tract in which the cultivators had a quarrel with the Opium Department, and they boycotted poppy cultivation for years and generations, but I rather think that they have taken to it again now.

19132. The Opium Department of course is quite separate from the district staff, so that the district officials have no interest whatever in the working of the Opium Department?—None.

19133. Have you had any complaint at any time on the part of cultivators as regards compulsion or anything of that nature?—No.

19134. If there had been any general complaints on the subject, you would expect as a district official to have them brought to your notice?—I should certainly have heard of them.

19135. (Mr. Pease.) You stated that you had had petitions from ryots beseeching you to give them permission to grow poppy on account of the malarious nature of the district; would you kindly explain what benefit they would derive from it?—That is for a doctor to say; but they have implicit belief in the benefits of opium in a damp, malarious district.

19136. But if they grow opium, they would have to hand it over to the Government?—Every one knows that they do not make it all over to the Government—that some remains behind.

19137. They want to be able to grow opium and retain a certain portion?—Yes.

19138. Did they put that afterwards as an argument?—Not in so many words. Even if a man gave up the whole of his opium, he would retain his pottery from which he could make an extract. As a matter of fact, they all retain some opium. I do not think there is a cultivator in the country who does not keep back something for his own use.

19139. That was the perquisite of the Khatadar in the Patna district?—They have not Khatadars here; there is direct dealing with the tenant.

The witness withdrew.

MAJOR H. N. McRAE called in and examined.

19159. (Chairman.) You are Officiating Commandant of the 45th Rattray's Sikhs?—Yes.

19140. You stated that certain lands in the neighbourhood of Lucknow were not now licensed. Has there not been a general tendency to withhold license from lands in the immediate neighbourhood of the towns without giving compensation, although they may have been extremely valuable to the ryots for the purpose of growing opium?—Yes, I may add that lands near towns have great advantages. Market-gardening is so much more easy for a man in the neighbourhood of a large city like Lucknow than it would be in a village 20 or 30 miles off.

19141. Then there is no place in which it would be a greater punishment to the ryots to have the cultivation prohibited?—There is no place probably in which the making of illicit opium would be greater than in Lucknow.

19142. (Mr. Mowbray.) Also there is no place where the other crops can be grown with more advantage?—Yes.

19143. Although it may be possible to interfere in a limited number of cases with ryots who have been growing poppy, especially in districts round cities where there is a good opportunity of growing other crops of a market-gardening character, do you think that generally all over the country the withdrawal of the advances which now accompany poppy cultivation would cause considerable disturbance to the agricultural interest of the country?—I would guard myself in reference to the districts with which I have no intimate acquaintance; but I think that in these parts, if it were done gradually, and by a reduction of the advance which would disincline people to take up poppy cultivation, it might be closed in the course of a few years.

19144. Gradually?—Yes, gradually. It would be a serious blow to them, but they have survived many other blows of a similar or equal kind.

19145. (Mr. Wilson.) With reference to your report of 1882-83, there is one portion about which I have asked several witnesses, and I think I ought to take this opportunity of drawing your attention to it. You have used the expression, “It is comparatively easy to prevent the extension by needless encouragement of this degrading vice.” Did that refer solely to smoking?—Yes. All this is with reference to *chandu* smoking.

19146. It has no reference to eating?—It is entirely in reference to smoking. When I took over the charge of the Excise Department, I consulted the Native gentlemen of the district in which I was, asking what their objections were with regard to excise matters, and this was the only objection they had to make—the *chandu-smoking*.

19147. In what district were you an Opium Agent for seven months in 1887?—In the Benares Agency.

19148. The whole of the Benares Agency?—Yes.

19149. With reference to the closing of cultivation, do I understand that the Department officials are withdrawn from certain districts?—If poppy cultivation is no longer licensed, the officials go to where they are required.

19150. So that in such districts individual cultivators could not now be licensed because there is nobody to look after them?—No authority is left in the neighbourhood.

19151. When that took place, were there any complaints from the people?—I did not serve in any of the districts at the time. No doubt there was a certain amount of discontent, but the cultivation was more or less sparse.

19152. You do not know the actual facts?—No, I left the Department. I was only there seven months, and then I was in quite another part of the country. I was in Aliqarh afterwards, where there was a very sparse cultivation, and there were not very serious complaints.

19153. There was no compensation?—No compensation.

19154. Where is Basti?—It is one of the North-Western districts.

19155. Is cultivation still carried on there?—Very largely.

19156. Have you heard of any complaints there from poppy-growers?—No.

19157. That did not come under your notice?—I have nothing to do with that part of the country.

19158. (Chairman.) Do I collect that in the district with which you are now more particularly connected the cultivation of poppy is relatively unimportant?—I would not say that. It is not so important as in the north-eastern districts, which are the great home of the poppy.

The
Hon.
A. Cadell.
25 Jan. 1894.

Major
H. N.
McRae.

19160. Has the question of the consumption of opium by the men under your command come much under your

Major
H. N.
McRae.

25 Jan. 1894.

observation?—No, the matter has rarely come under my observation. I believe that opium is taken by nearly all Sikh soldiers.

19161. What proportion of the men under your command admit that they take opium regularly?—In the regiment under my command 5 per cent. acknowledge to take it every day.

19162. During your service in the 45th Sikhs, what has been your experience as to the effects of opium in regard to crime?—For a period of nearly 20 years I have never known a case of a man omitting to perform any duty or committing any crime from the effects of opium, and I do not know of any case of a soldier being punished for neglect of duty or any fault connected with its use.

19163. In your opinion is opium valuable when the regiment is called upon for hard service?—I consider that opium as taken by the regiment under my command does considerably more good than harm, and is in many cases beneficial, specially on the line of march, service, or other hard work, and when men are suffering from slight disorder of the stomach by removing pain, sense of fatigue, and enabling a man to eat his food.

19164. Do you think an order of the Government prohibiting the use of opium, except under medical certificate, would excite great discontent among your men?—Very great discontent.

19165. (Mr. Pease.) Have you made any special enquiry with regard to the number of men who consume opium?—Yes.

19166. Can you give us the result?—I find that 5 per cent. of the men acknowledge to taking opium every day, but that probably all the men take it occasionally.

19167. Is your strength 912?—Yes.

19168. Five per cent. take it habitually?—Yes, every day, all the year round.

19169. What is the quantity they take?—About one or two grains, but some probably more.

19170. Many, do you think?—I should say not many.

19171. What proportion of those who take it habitually?—It is only a matter of opinion—I should say, perhaps, 1 per cent. would take more—about 8 men in the regiment.

19172. Have you observed any injury to the health of those men who take more than one or two grains?—No, I know a case of one man who has been an habitual opium-eater all his life. He is one of the finest men in the regiment.

19173. What is his quantity?—More than two grains. Another soldier who looks out of health has taken opium

since the Afghan War, when he said he started it because he suffered very badly from dysentery. If he stops the opium the dysentery comes on again. I consider that this man is not any the better for the use of opium, but he probably would have died from dysentery if he had not taken it.

19174. (Mr. Wilson.) You said that opium is taken occasionally by nearly all Sikh soldiers?—Yes.

19175. We have had some evidence, from certain regiments at all events, that exceedingly little opium is taken, much less than in your regiment. Have you made enquiries with regard to other regiments?—No.

19176. What you have stated is your general impression?—Yes. It refers to my own regiment more particularly.

19177. What you have stated refers to particular enquiries you have made?—Yes.

19178. Have you been on active service with these men?—Yes, for two years and six months.

19179. Has any arrangement been made for the supply of opium regimentally, or do they supply themselves?—They supply themselves.

19180. Have you known cases in which there has been a failure of supply?—No. I have never heard any complaints.

19181. I understand you to say practically that the 5 per cent. who take it habitually are neither better nor worse than their comrades?—Neither better nor worse. Some of our strongest men are habitual opium-eaters; the tug-of-war team, and so on.

19182. (Mr. Mowbray.) What districts do your men come from?—Amritsar and Ferozepur.

19183. I suppose the bulk of them are under 40 years of age?—Yes.

19184. (Mr. Fanshawe.) One or two other Commanding Officers who have come before us stated that they found it somewhat difficult to ascertain the number of habitual opium-eaters in their regiments; do you think that the 5 per cent. which you have given as the number of opium-eaters on the result of your enquiries can be taken as strictly accurate?—No, it is most difficult to get the exact facts. It is merely my opinion, because every Sikh soldier does not like to admit that he takes opium.

19185. You found some difficulty like the other Commanding Officers we have had before us?—Yes.

19186. Would your own opinion be that the percentage is rather higher than what you have stated?—Yes, I daresay it is. I daresay that 15 per cent. of the men take it regularly.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL H. BOYD called in and examined.

Surgeon-
Lieut.-Col.
H. Boyd

19187. (Sir William Roberts.) You are now in medical charge of the 45th Sikh Regiment?—Yes.

19188. Where were you before that?—I was in the 14th Sikhs, and before that in the 23rd Sikhs.

19189. What experience have you had of the effect of opium on Sikh soldiers?—I have seen practically no ill effects from it. Whilst in the 14th Sikhs (ten years) I associated with the men in the lines, joined in their games, and was looked on as a friend. I knew the men who took opium. Since then I have been with the 45th Sikhs. From observation I formed an arbitrary standard to distinguish between use and abuse. This I fixed at 15 grains of crude opium daily. This quantity did not appear to exercise any deleterious effect on the men's health, but it was difficult for them to give it up, and when forced to do so (as when under punishment), they suffered for some time from pains in the stomach, constipation, and general lassitude. Under 15 grains a day could be given up, and a little strong tea for a day or two was all that seemed required. Altogether about 80 per cent. of the men took opium. Very few, not more than 15 per cent., took it daily. The others took it only when fatigued, or when about to undergo some fatiguing work. The men also take opium when an attack of ague is imminent, as they say it reduces the aching of the bones and hastens the sweating stage.

19190. You say they suffered from constipation when the opium was withdrawn. We have generally heard the stoppage of the opium produces diarrhoea?—I have never found it was so.

19191. What is your experience with regard to the effect of opium as a prophylactic against malarial fever?—I

never knew it taken as a direct prophylactic, but no doubt it does act indirectly in that way by its stimulant action in cases of over-fatigue. On the line of march and on service in the field it is decidedly of use, as it prevents, to a great degree, the diarrhoea so common on these occasions. I have always taken a private supply with me when going on service, and I have told the men to apply to me if they could not get it elsewhere and were running short.

19192. Would you like to make a statement with regard to the report that the 14th Sikhs broke down in the Cabul Campaign through not having opium?—There was a report that the 14th Sikhs broke down in the Cabul Campaign of 1878 through not having opium. There was absolutely no foundation in fact for this report. The only thing I can think of, which may have suggested the report, was my telling the Deputy Surgeon General that I had run out of tincture of opium. I had a private supply of opium, and the men knew it. My supply (up to the time at which I became ill myself from pneumonia) was not drawn on. The inference is that the men hid enough. In the Black Mountain (1888), when it became very cold and wet, with very fatiguing duties, many men came to me for opium. Most of these men took it so seldom that they had not thought it worth while to bring any with them.

19193. What has been the result of your general experience with regard to the use of opium among Sikh soldiers?—I have always reported to the Commanding Officer cases when men took opium in excess, either daily or occasionally, and in sufficient quantities to render themselves stupid. So far as I can recollect, or discover from my records, I have made six such reports in the last nine

years, and two at least of these took both opium and alcohol. Excess in the use of opium does not lead to active mania, such as that produced by *Cannabis indica* and its preparations.

19194. What are the worst effects that you have seen from the use of opium?—The worst effects I have seen have been hebeteude of mind, defective vision, and irregular action of the bowels.

19195. What is the quantity that is taken among the soldiers?—The usual quantity taken varies from 2 to 6 grains, and that quantity does not seem to create a craving or require to be increased. It seems to have much the same action as coffee. There is not a man in the regiment at present, so far as I can learn, who takes more than 8 grains of dried opium a day, and there are only about six or eight of those. About 15 grains of crude opium would be about 8 grains of dried opium. My opinion is that in small doses opium is as harmless as tea or coffee, and superior to either of these in being a stimulant which can always be taken at the time its action is required.

19196. What is your opinion as to the use of opium in excess?—In excess it is infinitely less harmful than alcohol, and the habit is not so rapidly formed. If the men were deprived of the small quantity of opium which they take now, they would probably take native spirits as a substitute, and the result would be a terrible increase in the "crimes list," and similar increase in the number of sick and unfit for service.

19197. I take it that the general result of your experience is that most Sikh soldiers take opium occasionally for emergencies?—They nearly all take it in emergency.

19198. Have you noticed whether some take it regularly in winter and drop it in the summer?—I have never noticed much difference.

19199. The number who take it habitually all the year round scarcely exceeds 15 per cent. ?—Yes.

19200. Are you speaking of the Sikh soldiers in general? Of my own regiments—the 14th Sikhs and 45th Sikhs. I have had no opportunity to judge of the other men.

19201. Have you noticed much tendency to increase the dose?—Not at all.

19202. Could you tell the difference between these 15 per cent. who take opium regularly and the rest of the men in your regiment?—I could not tell by a casual examination.

The witness withdrew.

SUBADAR JOWALA SINGH, of the 45th (Rattray's) Sikhs, called in and examined (through an interpreter).

19212. (*Mr. Fanshawe.*) How long have you been in the 45th Sikhs?—About ten and a-half years.

19213. To what district do you belong?—Rawalpindi.

19214. What have you to say with regard to the habit of taking opium among the Sikhs?—The Sikhs use opium even at their homes prior to enlistment. In the regiments very few commence it. The Sikhs use it only to keep up the health; the Mahomedans use it as tobacco, which they call *chandu* or *modak*. Old men use it to keep the weak organs in good working order, i.e., eye-sight, hearing power, etc. Some men eat this drug only by seeing another man doing so, but the real fact is that everybody uses it as a medicine, and besides this it is our Guroo's order that a Sikh can use a little opium.

19215. Can you tell us how many men, speaking generally, take opium in your regiment?—About 30 to 40 per cent. use it habitually. There are probably 90 per cent. who use it occasionally.

19216. What do you think is the effect of this use of opium on the men in the regiment; does it do harm or good?—To those who eat it in small quantities there is a great deal of advantage.

19217. Are there many men who take it in excess?—Probably not more than 1 per cent. take it in excess.

19218. (*Mr. Pease.*) Do you take opium?—I only take it occasionally, when there is any hard work or I am fatigued.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL A. J. WILLCOCKS, M.D., called in and examined.

19226. (*Sir William Roberts.*) You are Civil Surgeon at Agra, Superintendent of the Agra Lunatic Asylum, and a Fellow of the Allahabad University?—Yes.

19203. I suppose you have no facts to relate in the way of your experience which confirmed you in the opinion that opium had a good effect in guarding men against attacks of malarial fever?—I do not think it protects against malarious fever. I have no facts to go on that would lead me to that supposition. I only think it does good where they are over-fatigued in the same way as any other stimulant would do good.

19204. Indirectly?—Yes.

19205. Do you know whether there is a current supposition among Sikh soldiers that opium does protect them from fever?—Most of the Sikhs I have spoken to on the subject are of opinion that it does ward off fever.

19206. (*Mr. Pease.*) Have you had any evidence with regard to the effect of opium on a man's health in the case of pneumonia?—No. I very often give opium for pneumonia, but I do not know how it acts with regard to its general use. I have never seen any ill effects from it.

19207. There was a new fact brought before us a few days ago that those who take opium are slower in recovering from pneumonia; is your experience contrary to that?—I can hardly answer that question, because so many of the men take opium that I have no standard to go by.

19208. (*Mr. Wilson.*) Have you heard that opium is frequently taken to assist defective vision? You have said that defective vision is one of the results of taking opium?—I think the first effect of opium on the vision is to improve it, but, like all stimulants on the nerves, it tends to lessen the vision afterwards as it wears off.

19209. You think there may be some temporary good at first, but it wears off afterwards?—Yes, it is the re-action.

19210. We have generally understood that drying opium did not make much difference—you say that 8 grains of dried opium are equal to 15 grains of crude opium; we have heard that drying it would not bring it to more than at the most 12 grains?—The crude opium which they take is very much adulterated, and the dried opium is purer.

19211. Do you know whether the recruits, when they come to the regiment, have been in the habit of taking opium at home?—It depends entirely on the part of the country they come from. The Malwais take opium from childhood; the Manjhas do not take it until they are of adult age.

19219. Why do you not take it habitually?—I only take it when I am fatigued.

19220. (*Mr. Wilson.*) You say there are 912 men in the regiment. I wish to know how many men there are who take opium every day in small quantities?—Between 30 and 40 per cent.—30 to 40 men per company.

19221. At what age do the men enlist in your regiment?—Between 18 and 19.

19222. And they have not usually taken opium before they join your regiment?—They have taken opium before they join the regiment.

19223. (*Mr. Mowbray.*) Would there, in your opinion, be discontent in the regiment if the sepoys could only get opium by the doctor's orders?—All Sikh regiments would be very dissatisfied about it.

19224. (*Mr. Haridas Veharidas.*) You said that there are 30 or 40 men per company who take opium, and as there are eight companies in the regiment, the total number who take opium every day would be about 320?—Yes.

19225. If you have two candidates for enlistment, one who does not take opium and the other who does, would you prefer the man who does not take opium to the man who does?—It would be no drawback to a man's enlistment if a man took opium; the question would not arise.

25 Jan. 1894.

19228. What has been your experience in regard to the use of opium in India?—My experience is derived from nearly twenty years' service in India, nearly the whole of which time has been spent in the Civil Department. I have also held charge of a lunatic asylum for nearly eight years. All my service has been in the North-Western Provinces, and I have no experience of other parts of India. The moderate use of opium is certainly very common in the Agra district, but I can give no figures. I have had a very extensive ophthalmic practice, and many of my patients have taken opium under the belief that it is good for cataract and other eye diseases. There is a widespread belief that it is useful in malarial *cachexia*, and many people take it on that account. The ordinary moderate consumer does not go on increasing the dose as commonly alleged. The abuse of the drug is exceedingly rare. The worst cases I have met with have been in highly educated Europeans. The abuse of opium, like that of alcohol, destroys the moral instinct, though in a less degree. The moderate use of opium exercises no deleterious influence on the moral and physical condition of the people.

19229. Have you seen cases of excessive and injurious habitual consumption of opium among the natives of India?—Exceedingly rarely.

19230. You can scarcely recall them with precision?—I can recall one or two specific instances only.

19231. Do you remember what the symptoms were?—The chief symptoms were sluggishness, mental and physical.

19232. Were they emaciated?—Not very markedly.

19233. Were they people in easy circumstances, with plenty to eat?—No, the people I refer to were in Government employ on about Rs. 10 a month.

19234. But they had plenty to eat?—Yes.

19235. Is there any feeling, as far as your experience has gone in India, against the non-medicinal use of opium?—There is no feeling whatever against the moderate non-medicinal use of the drug among the people of this Province. The people look upon opium as a blessing and not an evil, and entirely deprecate all prohibitive measures. From a purely medical point of view, I am of opinion that the moderate use of opium is not more harmful than the moderate use of tea, coffee, alcohol and tobacco, etc., and it is not much more liable to abuse. It is very rarely indeed that I have met with such cases. In a vast number of cases on the contrary I believe that the moderate use of opium is extremely beneficial: for example, in the feeble, the old, and those broken down by bowel complaints, chronic coughs, syphilis, ulcers, in malarious *cachexia*, etc. To deprive these ill-fated, ill-clad people of the comfort and solace they now derive from opium would be a cruel act, and would give rise to most serious discontent. Insanity has been occasionally ascribed to the abuse of opium, and in one instance in my capacity as Superintendent of a Lunatic Asylum I have myself returned this drug as a cause, but I now believe on insufficient grounds.

19236. What experience have you had of opium as a febrifuge?—I have very little personal experience of opium as a febrifuge, but amongst the people it has a high reputation, is largely consumed, and I believe with benefit.

19237. It acts beneficially in various ways in malarious districts?—Precisely so.

19238. You use a very happy phrase here—"Malarious *cachexia*." You believe that there is a constitution induced in malarial districts which might be called "malarious *cachexia*?"—Yes.

19239. You think the use of opium is beneficial in these cases and diminishes the recurrent attacks of fever to which they are liable?—Yes.

19240. So far you think that it is a protective?—I think it is.

19241. Have you had charge of dispensaries?—I have always had charge of a dispensary for 20 years.

19242. So that you come into intimate contact with the common people of the country?—Most intimate.

19243. Have you observed the habit among infants?—I have had no experience of the use of opium among infants, though I have frequently heard of it. I have heard of accidental poisoning taking place, but not that it is habitually given in the form of food at all.

19244. Were any of these cases fatal?—They must have been some of them fatal. I think we had a case quite recently in the hospital here.

19245. What was that from?—From the prescription of a non-qualified practitioner.

19246. It was not from excess in the custom of habitually giving opium?—Not at all; it was an accidental case.

19247. At what age do you think from your experience the people of India commence using opium?—I have no figures to go on, and it is only a pure guess; but I should say it was over 40 years of age.

19248. You think it is mainly a habit of after life?—Certainly, adults.

19249. Have you recognized the fact that opium may be used as we use wine or tobacco, as a stimulant or comforter?—That is precisely my meaning.

19250. When it is used in that way you do not think it more injurious than these other stimulants?—No, I do not.

19251. (*Mr. Pease.*) You state that many of your patients believe that opium is good for cataract and many other eye diseases; what is your view?—My own view is that it does them no harm.

19252. (*Mr. Wilson.*) You are not prepared to say it does them good under those circumstances?—No, I am not prepared to say it can do them any good.

19253. You have said that the moderate use of opium is not more harmful than the moderate use of coffee, tea or alcohol, and is not more liable to abuse?—Yes.

19254. You think it is a little more liable to abuse?—I mean the abuse of one is more harmful than the abuse of the others; for instance, no one would compare the abuse of opium with the abuse of coffee; but taking the whole series of food adjuncts, coffee and all the rest, I do not think it is so liable to abuse. It is less liable to abuse than alcohol.

19255. Less insidious?—Yes, in every way.

19256. This medical term "*cachexia*" has been referred to several times by other witnesses; how would you define that?—The bad state induced by malarious poisoning.

19257. What would you say as to the habitual use of opium for men under 35 or 40 who are in good health?—If they take it in extreme moderation, I should not think it could do them any harm any more than alcohol does to us.

19258. Do you know any medical man who prescribes opium as a prophylactic against fever?—I do not.

19259. (*Mr. Mowbray.*) Have you had any experience of Europeans taking opium in this country?—Yes, I have stated that the worst cases I have met have been among Europeans.

19260. Could you tell me whether you have often come across cases of Europeans taking opium?—No, very seldom.

19261. Can you give me any reason why the Natives here should take it and why Europeans do not take it?—Because Europeans have several other things; they have tea, coffee, cocoa and alcohol chiefly. I think that is a very sufficient reason.

19262. You think that the effect of opium on the Europeans who take it is worse than on the Natives?—I do not think so. These cases I speak of were cases of extreme abuse.

19263. You say you have been in charge of dispensaries there are in the Agra district?—There is one big main dispensary, which is the hospital as well.

19264. That is in Agra itself?—Yes; in the city of Agra there are five dispensaries besides, there are three under the Dufferin Fund, and three ordinary Government dispensaries. Then in the district there are three besides, and one under the Dufferin Fund.

19265. Four altogether in the district?—Yes, outside our circle.

19266. Do you know how many opium shops there are?—I do not.

19267. Do you think that for the ordinary supply for the legitimate use of opium the existing dispensaries would be sufficient in the Agra district?—Certainly not.

19268. (*Mr. Haridas Voharidas.*) You say that opium is less injurious than alcohol. Would you advise your friends, whether Europeans or natives, to give up the habit of taking alcohol and take opium?—Certainly not; if any one asked my advice, I would advise him not to take either.

19269. If he was inclined to take some stimulant, would you prefer that he should take opium to alcohol?—No, because I think alcohol is far more pleasurable than opium. It has the advantage that more comfort and pleasure is derived from it than from opium. I am only speaking from hearsay, because I have not taken opium.

19270. You would not advise Europeans to take opium, but would you advise Natives?—I would advise them to take neither, but if they had to take one or the other, I should advise opium.

19271. You make this distinction between Europeans and Natives?—I do.

The witness withdrew.

GOBIND RAM CHOWDEY called in and examined (through an interpreter).

Gobind Ram Chowdry.

25 Jan. 1894.

19272. (*Mr. Wilson.*) You are a Tahsildar at Ganhati in Assam?—Yes.

19273. Have you lived in Assam since your birth, 66 years ago?—Yes.

19274. Is it your opinion that the effect of eating opium is universally bad?—It is universally bad.

19275. Does it make consumers weak, languid, and sickly?—By eating the drug people become not only weak and sickly, but they also become wicked, thieves, and so forth.

19276. Is the effect on old opium-eaters that they are unable to walk or work?—Distinctly so; they are unable to walk or work; and they also become under its influence forgetful and neglectful.

19277. Do you mean by "old opium-eaters" elderly persons or persons who are accustomed to take large quantities of opium?—Both.

19278. Do many persons give up the habit of eating opium when they once begin it?—Only two or three in a thousand. There are very few who will ever leave it off when they have once adopted the habit.

19279. What do you think of its qualities as enabling people to do hard work?—It does not enable them to do hard work.

19280. Do the opium-eaters think it helps them?—Even those who eat it do not think they can do better or harder work; they merely take it for their own pleasure.

19281. Do the people of your district, the neighbourhood of Gauhati, consider that opium is a protective against fever?—They do not think it is a preventive against fever, but some of them say that it does them good when they have fever, but it is all lies.

19282. I wish to know whether opium-eaters in moderation are in any way looked down upon by their friends and acquaintances?—They are looked down upon; even though they eat only a little, they have the name of being those who indulge in that which is intoxicating, which is a bad name to give them, even when they only take a little.

19283. Has the fact of their taking opium any effect on their evidence in courts of law?—In courts of law their evidence is not as good as those who do not take opium.

19284. Is opium also taken for the purpose of fostering lust?—They take it when they have some bad object in view.

19285. How do you compare opium-smoking with opium-eating?—The smoking of opium is worse than opium-eating.

19286. Do you consider that the present mode of selling opium increases or restricts the amount that is consumed?—On account of the Government's arrangements the consumption is certainly greater, because if they did not get it from the Government, where would they get it from?

19287. Do not the people use the argument that it is good because the Government sells it?—They say, "If it is a bad thing, why should the Government sell it?"

19288. Would you approve of the sale of opium being prohibited, except for medical purposes?—I wish it could be prohibited, except for medical purposes.

19289. If that were done, do you think it would give rise to serious discontent or trouble?—The great

majority, not being opium-consumers, would certainly support it. Instead of being displeased, they would certainly be pleased that it should be prohibited. There is nothing to fear from the natives of the country in regard to prohibition.

19290. (*Mr. Mowbray.*) How many persons in your district consume opium? I want to know the percentage of the people who consume opium?—Ten per cent. of the people are eaters of opium.

19291. Do you think that is about the same as the rest of Assam?—That is my belief.

19292. We were told by another witness the other day that 90 per cent. of the people in Assam consumed opium; do you agree with that?—I believe it is only about 10 per cent.

19293. What do those people do who cannot work or walk?—They can do nothing, their children have to feed them.

19294. (*Mr. Haridas Veharidas.*) Do you follow the Hindu religion?—I am a Hindu.

19295. Do you know that the use of alcohol is prohibited by the Hindu religion?—I do.

19296. Of course you know that human nature is inclined to take some stimulant, and if opium were altogether prohibited except for medical purposes, would not the Hindus take to alcohol, which is prohibited by their religion, instead of opium?—I do not believe they would.

19297. The people are inclined to take some sort of stimulant, and if opium is prohibited, would not they take to alcohol if it is to be had freely?—They will not take to drinking, because that is contrary to caste rules, and even if it might be had freely, they would refuse to drink it because it would put them out of caste, whereas they might take opium and remain in caste.

19298. Do you take opium?—No, not at all.

19299. Do you take any other intoxicant or stimulant?—No.

19300. (*Mr. Fanshawe.*) Is it not the case that Government has very largely reduced the number of opium shops in Assam?—I am not aware of the fact. I believe that the number has increased.

19301. Are you aware of the fact that the price of opium has been increased of late years?—I am aware of that fact; it has risen from Rs. 30 up to Rs. 37.

19302. I find that during the last 19 years the number of shops in Assam have been reduced from 5,070 to 866?—It may have taken place in other districts, but certainly not in my district (Kamrup.)

19303. (*Chairman.*) Do you recommend general abstinence from stimulants?—My belief is that all stimulants should be given up.

19304. Would you recommend that the same prohibition should apply to alcohol as you recommend in the case of opium?—That is what I wish.

19305. (*Sir William Roberts.*) Do you include tobacco among the stimulants that you would prohibit?—I do not see any harm in tobacco being taken. I do not wish that to be prohibited.

19306. (*Mr. Pease.*) Are any licenses for the sale of opium in your district held by tea planters?—I do not know of any such case.

The witness withdrew.

MR. A. W. CRUICKSHANK called in and examined.

19307. (*Chairman.*) You are Magistrate and Collector of Agra?—I am.

19308. Will you give us any information you deem important as to the relative importance of the poppy cultivation, its popularity, the employment it creates and the extent to which prohibition would affect rents and land revenue, etc., in the districts which are placed under your charge? I believe you are prepared to quote passages from your Settlement Report?—I was in charge of the Gorakhpur district before I was in charge of the Agra district. There is no cultivation of poppy in Agra. I will read some paragraphs of my late report on the Gorakhpur district.

19309. You are about to give us your experience as Settlement Officer for the Gorakhpur district?—Yes, in paragraph 480 of my report I wrote: "*Rabi non-food*

crops. Opium is by far the most valuable of the non-food crops. At the time of Buchanan's visit to this district—

19310. What date was that?—In the first quarter of this century. "At the time of Buchanan's visit to this district the cultivation of the poppy, if known, was so little practised as to escape notice. Apparently the cultivation of this drug as a Government monopoly was first introduced into this district in the early part of the century. So far from the cultivation of poppy having been driven out by the two rivals, sugar and indigo, as Mr. Rend, Collector, in 1840, seems to have anticipated, the increase in the spread of its cultivation has been very steady, and any checks in its growing popularity with the tenantry have been due rather to exigencies requiring curtailment of operations on the part of the Opium Department than to any disinclination

Mr. A. W. Cruickshank.

26 Jan. 1894.

Mr. A. W. Cruickshank. on the part of the agriculturists to grow a crop for which they get so liberal advances on easy terms. Whereas 30 years ago, in 1859-60, there were 11,026.28 acres of poppy worth Rs. 1,89,718, or an average of Rs. 17.20 per acre; there were in 1887-88, 19,348.46 acres of poppy worth Rs. 10,23,504, or Rs. 52.89 per acre. The effect of the large advances made by the Opium Department to the tenants, which aggregate Rs. 2,57,84,228 in the same period of 30 years, i.e., averaging Rs. 8,59,474 per annum, will be dealt with in another place."

19311. You have given us the figures showing the advanced value of the land on which poppy is cultivated; will you explain the cause of those advances?—I wrote, as follows in paragraph 536 of that report:—"Special rates do, however, prevail to a large extent for poppy lands in the portions of the district where the poppy is most successfully cultivated, and to a less defined extent for the land devoted to garden cultivation in the vicinity of large village sites. In both these cases the enhanced value of the land is usually due to the labour of the cultivator rather than to any exertion or capital expended by the zemindar. In both cases the land is usually soil of the *goind* circles (that means of the circle next to the village), and to this extent is land for which a higher rent-rate is fairly applicable than for ordinary fields. In the case of garden cultivation, the special rent-rates are more specially due to the enhanced value given to the land by the incessant industry of the "Koeri," "Kurmi," or other classes of tenants who devote themselves to "koerari," or garden cultivation, and through whose efforts the soil is made to yield three crops a year of vegetables, tobacco, spices, etc., i.e., of crops worth more per acre than the ordinary rice, cereals, and millets. The enhanced value of the returns from the soil enables the tenants to pay a higher rent for their *koerari* fields, and, in justice to the land owners, it must be said that custom appears to recognise the propriety of the garden cultivators paying a share of their extra profits to the land owner in the shape of this enhanced rent."

19312. Can you give any reasons why the poppy cultivation is advantageous to the cultivators?—I wrote as follows:—"In the special case of poppy cultivation, besides the proportionately excessive value of the crops, there is also the certainty of prompt cash payments for the outturn. More than this, the fact that the poppy cultivator receives large advances in cash from the Opium Department, and is therefore comparatively more readily able to pay his rent promptly and in full, undoubtedly is one of the chief reasons that poppy rents are high."

19313. Are there any other circumstances to which you wish to refer which have an effect in determining the rent of poppy land?—I wrote on that matter as follows:—

"There is, however, a reason of great potency in raising the rent of poppy land which derives its force from the prompting of ordinary human nature in the first instance. To many land owners the cultivation of the poppy is really or ostensibly distasteful from quasi-religious or racial prejudice. To many, more especially to the uneducated and unintelligent, the fact of their tenants being supplied with cash advances by an outsider, an agent whom they cannot control, in order to grow a crop, in whose prospects they feel no personal interest, is doubly odious. That the outsider is a Government Department does not, in the case of such land owners, abate their prejudice. Although in many cases they do not consider it judicious to absolutely forbid their tenants to grow poppy, yet they consult their pecuniary interest, and perhaps salve their hurt feelings by exacting a very much higher rent as the preliminary to according their sanction to the cultivation of poppy. If the punctual realizations of their rents were the main object of land owners, the encouragement of poppy cultivation would be more hearty on their part. It is, however, a truism to record that the distaste felt by the ordinary class of Gorakhpur zemindars for any signs of growing independency on the part of their tenants, such as punctual payment of rent and borrowing of capital from sources other than the land owners, is not a decreasing quality. Having once established the special poppy rent for a particular field, the tenant is frequently compelled to continue payment at that rate whether he continues to grow poppy or not."

19314. Are we to gather from what you have told us that the cultivation of poppy is generally more popular with the cultivators than with the land owners?—Yes, it is so to a great extent.

19315. Have you a statement to put in, showing the land

revenue and the average value of the opium crop in the Gorakhpur district?—Yes, the statement is as follows:—

Tahsil.	Pargana.	Total cultivated area.	Average area under opium (1879-88).	Land revenue.	Average value of opium crops.
1	2	3	4	5	6
		Acres.	Acres.	Rs.	Rs.
GORAKHPUR.	Hasanpur Mahgarh	56,019	361	66,717	1,89,306
	Bhawapur	30,442	616	43,106	3,25,139
	Haveli	206,959	668	2,60,313	2,12,595

19316. What is the result of your observations with regard to the general effect of the use of opium?—With regard to the effect of the use of opium in moderate or excessive quantities on the moral and physical condition of the classes who consume it, as a Magistrate and Excise Officer acquainted with the disposition of the people, I should state that I can recall no instance of crime traceable to the use of opium on the part of the criminal. Suicides from an over-dose of opium occur, but in an infinitesimally small proportion as compared to suicides from jumping down wells. It would not be seriously argued, that well irrigation should be stopped because wells were occasionally utilised for purposes of suicide. I know of no native opinion, except that of fanatical religionists, which condemns the moderate use of opium. It is widely used in very minute doses to alleviate suffering, to counteract malaria, and to sustain energy under exceptional circumstances, such as forced marches with small rations. Its excessive use is condemned by all sections of native society, and it stands to reason that the excessive use of any drug, intoxicant or stimulant, must result in physical, if not moral, deterioration.

19317. How do you compare the effect of alcohol, physically and morally, with the use of opium?—Among intoxicants opium is not considered such a disgraceful intoxicant as liquor. This is not an opinion based on my own prejudices or partialities, but on the native public opinion. In this connection I would quote from Dr. Buchanan, an unprejudiced observer in the early part of the century. In his notes on the district of Rangpur (page 496, Volume 3, Martin's "Eastern India") he says:—"In habituating themselves to its (*ganja*) use some people are killed, but after they are seasoned, it produces nearly the same effects as opium. The use of both plants is considered as much more reputable than that of the juice of the grape, and in this district never leads to any of those violent excesses of ungovernable rage which it is imagined to produce among the Malays." On page 114 of his description of the Purainiya district (Martin's "Eastern India," Volume 3) he alludes again to opium as "the most reputable intoxicating substance used by the native." Briefly the consequences of intoxication from opium are confined to the person taking opium to excess. It does not make him a nuisance, or perhaps a danger, to his neighbours, as is too often the case in instances of alcoholic drunkenness.

19318. Is it difficult to shake off the opium habit when acquired?—When it is once acquired it cannot be left off without physical distress. The intoxication caused by small doses of opium is stimulating rather than confusing as long as the effect lasts.

19319. As to the present excise system, what have you to say with regard to whether it stimulates or represses the consumption?—As regards the question whether the present excise system stimulates or represses consumption, I propose to lay before the Commission the figures of the revenue derived from opium during the last 30 years in Agra,

which do not show any ground for believing that the consumption of opium is stimulated by the present excise system.

19320. Will you give us your figures?—I have a statement showing the income derived from the license fees and the sale of opium for the last 30 years.

19321. Can you give us any leading figures from that statement?—In 1863-64 the income derived from the sale of opium was Rs. 28,749, in 1891-92 it was Rs. 23,563, and in addition to that there was the sum of Rs. 4,785 paid for the licenses for retail vend, which were given formerly without payment, so that the cost of opium has been made more expensive by Government.

19322. How far do you consider that the habit of opium-eating is traceable to the influence of the British Government?—The habit of opium-eating was not introduced by the British Government, and would go on whether the British Government levied revenue on opium or not. The present system appears to meet the desiderata of supplying an existing want at a price high enough to raise a substantial revenue, but not so high as to encourage extensive smuggling.

19323. Have you any general remarks to make?—To abandon a revenue derived from the consumers of opium and to impose the same amount of taxation on the country at large, including non-opium consumers, would in effect be a bounty on opium-smuggling and a gift to the opium-consumers at the expense of the other tax-payers.

19324. (*Mr. Pease.*) Who are the fanatical religionists to whom you refer?—I do not refer to any one by name.

19325. To Christians or Mahomedans?—I never met a fanatical Christian; I was referring to Mahomedans and Hindus.

19326. (*Mr. Wilson.*) Are there not some Hindus who will take a strong view of this matter?—Some of the Gosain, who think themselves especially religious, object to stimulants of any kind, although opium is not forbidden by the Hindu religion, so far as I am aware. Perhaps I could explain my remark about fanatical religionists better by an illustration. Water-works have recently been started in Agra, and although the water-supply for the water-works is sent from the Jumna and through channels untouched by English agency, or any defiling agency, several Gosains, who think themselves specially religious, will not take this water. They prefer to go on taking the water out of the dirty wells.

19327. Is that the case where there has been some question raised about the nature of the varnish inside the pipes?—I do not think it is the coal tar or anything that is used inside the water pipes.

19328. Is the ground of their objection that they have got it into their heads that animal fat is used in this varnish?—I think they have got it in their heads that it is a new way of supplying water, and therefore cannot be right. The only tangible reason they raised was that leather was used in the valves. The leather was at once removed, and another kind of valve substituted.

19329. You have stated "alcohol is not considered such a disgraceful liquor"—that rather implies it is disgraceful, does it not?—When used in the ordinary way as an intoxicant.

19330. You mean that opium is still considered somewhat disgraceful?—When used as an intoxicant in excessive quantities.

19331. Can you give us anything which you have met with in Dr. Buchanan's writings as to the general effect of taking opium on the people?—Dr. Buchanan (page 495, Volume 3, Martin's "Eastern India") writes:—"The people who use the poppy usually take every day two or three doses, and, although constantly intoxicated, are not disabled from transacting business: may they are said even to be able to work the better; but if they omit a single dose they are quite feeble and stupid, and their constitutions are soon exhausted, unless they at the same time can afford a nourishing diet, in which case the practice is said to do no harm."

19332. In your report you speak of the poppy cultivation being worth so much. What do you mean by the word "worth"; is that the gross annual proceeds?—I mean the value that they receive from the Opium Department for the proceeds.

19333. Money received from the Opium Department for opium only or for all the products of the poppy that they

obtain payment for?—The only definite information as to the value of the poppy is that supplied by the Opium Department—the price they give for it. Of course they make other stuff, trash and so on, from which they make a small profit.

19334. I was referring to the value of the figures?—I merely meant to express the price given by the Opium Department. That is the only tangible information that could be obtained. I took these figures from a statement furnished me by the Opium Agent.

19335. In reference to your settlement arrangement, paragraph 536, you quote "special rates do, however, prevail to a large extent for poppy lands." Will you tell me who lays down the rules or directions upon which you are to proceed when you are going to re-settle a certain district?—The Local Government under the directions of the Government of India.

19336. Are those instructions that the growth of poppy is to be included in arriving at the value of the land?—The instructions were to assess the revenue on the annual assets ascertainable by an attestation of rents, and the rents of poppy ground are included in the rents attested by the peasantry.

19337. The settlement is really founded on the rent which the people have been paying a few years previous; is that so?—Yes, every tenant is summoned, and from him and the zemindar is taken an attestation of the rent paid and received. Upon those amounts the settlement was made in Gorakhpur.

19338. Speaking generally, it is the value which you put upon the particular plot of land as long as that settlement lasts, or has it any reference to the crops that may thereafter be grown upon it?—In the North-West Provinces the settlement is not by field; it is an assessment made on the assets of the whole village. Of course if the rents of the individual fields which compose the village are affected, they affect the total rental of the village; therefore the revenue which is assessed on the total rental would be harder to pay if a large proportion of the rental were suddenly lowered by abolishing poppy rent.

19339. Supposing that the Opium Department should determine to discontinue the licensing in any of these villages, or any part of the district, or in the whole district, as the case might be, would the people have a claim for a reduction of rents on that account?—Under the existing law I am not aware that they would have a claim against the zemindar, because it would not be an action against him, but they would have an equitable claim against Government for some compensation, and the zemindar would have an equitable claim for reduction of revenue, because it would be impossible to pay the same revenue on reduced assets.

19340. We were told just now that certain districts had been withdrawn from opium cultivation. Do you know, as a matter of fact, whether any reduction of rents or of land revenue was made on such withdrawal of licenses?—I am not aware of the districts in which that has happened. I was not in Agra when opium cultivation was stopped, but it never reached any large area in this district.

19341. You are not aware that there was any reduction on that ground?—I am not aware.

19342. Are we to take your evidence as referring to Gorakhpur district?—I should like to explain my answer about opium being grown in the district. I have a statement here which shows that the area grown in Agra never exceeded 205 acres, so that that quantity distributed over several villages must have been an infinitesimally small area.

19343. Is it your opinion still that the cultivation is popular with the ryots?—I have every reason to believe it is. In Gorakhpur, as Settlement Officer, of course I never had anything to do with the Opium Department; but in the district in which it is grown I was constantly pestered by the people to use my influence to allow them to grow poppy. They begged me to use my personal influence to get the Department to allow them to do it. Of course I had to refuse. I had nothing to do with the question.

19344. Was that pretty general as regards the village; did most people want it, or only certain individuals?—Only individuals who had grown poppy in former years, and who had not been able to get licenses in that particular year.

19345. Were there numerous instances of this kind?—I do not suppose it occurred more than two or three times during a couple of years. I did not keep any record of these cases, because it was not my duty to do so.

19346. We have had some evidence in other places that the cultivation appeared to be more popular with the

Mr. A. W. Cruickshank.
25 Jan. 1894.

Mr. A. W. Cruickshank. zemindars than with the ryots on the ground that the ready money in the hands of the ryots enabled the zemindar to recover his rent?—My opinion is that the zemindar likes to keep the tenant indebted to him as much as possible, in the Gorakhpur district at any rate.

25 Jan :894.

19347. (*Mr. Fanshawe.*) Is it your opinion that the general prohibition of the use of opium in your district, except for medical purposes, would give rise to discontent?—It would give rise to very deep discontent.

19348. With reference to the applications from cultivators to be allowed to grow poppy, it would be the case in any given village, I suppose, that there would be only a certain number of cultivators who would grow poppy, not necessarily the whole number of cultivators?—A very small

proportion of the area is under poppy; even in the parganas that grow the largest proportion of poppy the percentage is very small.

19349. Is it not the fact that the whole of the cultivators would hardly ever grow poppy in any given villages?—I do not remember instances of that sort, but the villages are so small in Gorakhpur, sometimes 8 or 12 acres, but not villages of ordinary size.

19350. Of course circumstance may differ in every district. I understand your opinion to be that the cultivators who cultivated poppy thought it was an exceedingly valuable crop, and did not wish the cultivation to be prohibited. That is your general view?—That is my general view.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL B. O'BRIEN, M.D., called in and examined.

*Surgn.
Lt.-Col.
B. O'Brien,
M.D.*

19351. (*Sir William Roberts.*) You are Civil Surgeon of Fyzabad, Oudh, and Superintendent of the Fyzabad District Jail?—Yes.

19352. How long have you served in the North-Western Provinces?—Twenty years.

19353. What have been your observations with regard to the consumption of opium among the people?—The consumption of opium is not, so far as I am aware, confined to any class of the people in the districts with which I am acquainted, nor can I say that any particular caste or class of people use it more than others in these districts. I have known a considerable number of moderate consumers of the drug, and on those I could observe nothing physically that would distinguish them from others. I know several gentlemen who take opium whose lives might be made models to be followed with advantage by the majority. I know also several opium-consumers who are physically above the average of the people of this part of the country, that is to say, the eastern parts of the country.

19354. You are speaking of the natives of India?—Yes.

19355. Is there any discredit attaching to the practice of opium-eating?—No discredit attaches to a known opium-eater so long as he is a moderate consumer. The attitude of the people of this country with regard to opium-consumers is much the same as that in England with regard to people who use wine and spirits. So long as over-indulgence is not the habit, the consumer is regarded with the respect due to his station in life, and his general conduct independently of his habits, as regards the consumption of wine or opium, as the case may be.

19356. What is the result of your experience as to the use of opium?—Opium is an invaluable drug for which none other can be substituted. I have never seen a case in my practice in which the prescribing of the drug in any dose brought on the opium habit. During the 20 years I have been practising in these Provinces, I have never seen any cases of disease at my dispensary which could be attributed to the use of opium. I have found many people who take opium, who come to the dispensary for other complaints, who were not injuriously affected by the drug. In my capacity as Superintendent and Medical Officer of Jails I have occasionally seen wrecks of human beings who attributed their emaciation and debility to excessive use of opium, which I could well believe, as under restriction from the drug and with proper diet and attention their health improved, and they generally increased in weight. I do not think in my whole service I have seen more than a dozen such cases, and certainly not more than twenty.

19357. In your service of 20 years?—Yes.

19358. Those would be cases amongst the poor, I suppose?—Yes, those cases were all in jail. I was referring to jails.

19359. Do you attribute the effect to opium-eating or to lack of food, poverty?—I attributed it more to direct effects of opium—the excessive use of opium.

19360. I think you said that often in those cases when the drug was withdrawn and proper food given they recovered?—Yes.

19361. I presume your inference was that the opium habit, even in excess, did not produce any organic changes?—No, this is the difference between opium and alcohol.

19362. Have you any experience of the use of opium amongst infants?—No.

19363. I presume you have recognized the difference between the native of India and the European with regard

to their tolerance with regard to opium?—There are not such a large number of Europeans who take opium, but I have seen some Europeans who took it more largely than natives. I had a case last year of a man who in my presence took a lump about three quarters of an ounce in one dose.

19364. Did he appear much affected by it?—He was an emaciated individual, but after taking this he wrote an article which was published very shortly afterwards in the *Pioneer*—a very brilliant article. I was trying to induce him to give up the habit, and he took this dose in my presence. He was very listless and dull before he took it. He said, "You will see the effect of my taking it, and immediately after taking it he began to write this article."

19365. I presume you regard this as a case of very great tolerance of opium?—Yes.

19366. We are all aware that such cases have been noticed among Europeans, but has it not been your experience that there is a far more common tolerance among natives of India than Europeans with regard to opium?—Yes.

19367. You would rather draw a distinction?—Yes.

19368. What is the cause of the difference? Have you thought what to attribute it to, whether it was due to climate, race, malarial cachexia or what?—I should say it is racial distinction that makes them more tolerant. I should not say it was malarial cachexia. I do not think all people are susceptible to that.

19369. (*Mr. Pease.*) We were told by a doctor in Calcutta that, bulk for bulk, opium had more effect upon a native than on a European?—For 20 years I have had but little to do with Europeans and nearly all to do with natives. During the last 20 years I have been 15 years in stations where there were not more than two or three Europeans, so that any statement I should make would be more from what I have read in text books than from actual experience.

19370. Would you not think it natural that from the far more simple diet of a native the drug would have more effect on him than upon the European?—I do not think it would be a proper conclusion to draw.

19371. (*Mr. Wilson.*) In reference to the gentleman you just mentioned who took a large quantity previous to writing an article, was he in the habit of taking large quantities like that?—That gentleman had been an habitual drunkard. He took a pledge to give up drink. Having given up drink he took to opium, and he was as immoderate in his use of opium as he had been previously in his use of alcohol. When I spoke to him he said he was immoderate in the use of everything. When he was in good health he ate immoderately, and when he went in for boating or anything else he went in for it immoderately. It was his form of insanity I suppose.

19372. Was he in the habit of taking it frequently?—Yes, daily. He told me so. I saw him take it once.

19373. Do you know what his condition was a few hours after taking the does you spoke of?—I saw him in the evening; he was perfectly calm. He was very ill at the time and he said he would be all right until the next day, and then he went over his proper time for taking his dose of opium he would be wretched. He said the dose would carry him on for 24 hours.

19374. Without stupefaction?—I saw him take it about 10 in the morning, and I saw him again about dusk—about 7 o'clock—and he was just the same as anybody else, no symptoms of stupefaction about him.

19375. (*Sir William Roberts.*) You estimate the dose at three quarters of an ounce?—Yes.

19376. Solid opium?—Yes.

19377. (*Mr. Wilson.*) Has it come under your observation or have you heard that it is a very common case that opium-eaters require large quantities of rich food, milk and so forth?—I have not heard of it.

19378. Do you recommend or prescribe opium as a prophylactic against fever?—No.

19379. Have you heard of it in this part of the country?—I have not heard of it.

19380. You do not know whether any of your medical brethren prescribe it in this part of the country?—No.

19381. (*Mr. Mowbray.*) Is Fyzabad a malarial district?—Not at all.

19382. (*Mr. Haridas Viharidas.*) Do you think there should be a distinction as regards the use of alcohol and

opium? Would you use opium instead of alcohol?—No, I do not like it.

19383. You like alcohol better?—Yes, I like alcohol very much.

19384. Is it an invaluable drug for which none other can be substituted?—As a medicine there is nothing to equal opium as a drug.

19385. Not as a habit?—No.

I should like to remark that I prepared my evidence in great haste. I was out in camp three days away from the station, and I was asked to submit my evidence at once. I should like to add that I have had a very large experience of natives, having seen about 200 out-patients per diem at the dispensaries in my charge. During 20 years of such experience I have seen less injury result from the use of opium in the number of natives I have seen than I have seen result from the use of alcoholic stimulants in the comparatively few Europeans I have met with in India.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL M. D. MORIARTY, M.D., called in and examined.

19386. (*Sir William Roberts.*) You are Civil Surgeon of Meerut?—Yes.

19387. And Superintendent of Meerut District Jail?—Yes.

19388. What experience have you had of the use of opium in India?—I have been five years as Surgeon of a Native Infantry Regiment (3rd Native Infantry), and sixteen years in the North-Western Provinces and Oudh as Civil Surgeon and Superintendent of Jail.

19389. What is your experience in regard to the use of opium in the Meerut district?—Opium is not much used in Meerut. The habitual consumers are perhaps not more than 3 per cent. of the male adult population. Native friends agree in this estimate. In my experience it is usually eaten. In the eastern districts, *e.g.*, Ghazipur, where I was Civil Surgeon for three years, it is more used, and to greater excess. It is also smoked a good deal there.

19390. *Madak* or *chandu*?—*Chandu*, I think. I have no experience of it beyond hearsay, but *chandu* is the name applied.

19391. Are they mostly moderate consumers in Meerut?—In Meerut, where I have been Civil Surgeon for nearly three years, the large majority of those who use opium are in my experience moderate consumers, taking about five grains daily in one or two doses. Such moderate use does not seem to have any prejudicial effect, moral or physical. The habit is usually acquired from having taken the drug on account of catarrh, rheumatism, &c., and generally under medical advice. Few seem to take opium in the first instance because they like it. I cannot say what proportion of habitual consumers take opium in excess, say in daily quantities of 25 grains or more. They are not many I think. The poorer classes who abuse opium generally suffer from it. They are usually thin, incapable of sustained exertion, often lazy, but generally quiet and inoffensive. I can imagine such an one committing theft rather than forego his daily dose. I am not, however, aware of any such case. The criminal classes do not appear to be specially addicted to opium. Thus in the Meerut District Jail, out of some 8,000 prisoners admitted during the past six years, only 25 were noted as being addicted to opium. Doubtless most of these had used it to excess; still out of 467 prisoners locked up on 30th October 1893, only eight admitted having taken opium regularly prior to imprisonment.

19392. What experience have you had of the effect of opium on well-to-do people?—Well-to-do persons who abuse opium do not suffer like the poor. A wealthy Mohammedan friend began to eat opium 43 years ago. At one time he took 90 grains daily; he now takes 45 grains. Some 25 years ago he gave it up for three years, and had diarrhoea for seven months. He is now 62 years old. He is thin and naturally of poor physique, but he is remarkably intelligent, and his mind is as active as ever.

19393. What do you think is the opinion of the people generally with regard to the habit of opium-eating?—In my experience the people in general look on opium-eating, and specially opium-smoking, as a bad habit, having a tendency to make a man lazy and unreliable and to injure his health. I have never yet heard a non-consumer say it was a good habit.

19394. What do you think would be the feeling of the people if prohibitive measures were imposed in regard to

opium?—I do not suppose the majority in these parts would much mind if opium was made more expensive and more of a luxury, but all would, I fancy, resent any taxation to make up for loss of opium revenue.

19395. What is your opinion, after all your medical experience, of the habitual use of opium on adults?—From a medical point of view the temperate use of opium by adults seems to be on a par with the temperate use of alcohol. It acts chiefly as a stimulant and produces a feeling of well-being. Beyond their own statements there is nothing to show that such consumers are opium-eaters. I doubt if the opium does them any good; but having once acquired the habit, any attempt to give it up makes them feel bad.

19396. Have you had any experience of the effects of opium when given to infants?—Mothers often give opium to their infants to keep them quiet, to constipate them, and so save trouble. An overdose is sometimes given. I have known such. The practice is I believe usually discontinued when the child is about a year old. I am not aware if it produces any permanent ill-effects.

19397. Have you personally come across any fatal cases as a consequence of the habit?—No.

19398. You have met, I suppose, with cases of poisoning?—I have seen infants brought to the hospital for treatment in an unconscious state.

19399. But none, so far as you remember, have actually died?—I have not seen them; I have heard of such cases.

19400. What would you say of the use of opium in excessive quantities?—The use of opium, say in quantities of 25 grains or more daily, is generally prejudicial. The consumers often have a dull and shrivelled appearance, are thin, and even emaciated; this is apparently due to want of appetite, and in poor persons to want of food. Those who can afford it take plenty of milk, ghee, &c., to keep up their strength. Excessive consumers are inclined to be lazy and are generally incapable of severe and sustained exertion. Without the regular dose of opium they can do little or nothing. I am not aware that the excessive use of opium predisposes to, or produces, any special disease. In jails it is my invariable practice to cut off the supply at once and completely. After a troubled week or so the individual begins to pick up, appetite returns, and he soon puts on flesh. I cannot say if the cure is permanent. Four opium-consuming prisoners have been received into the Meerut Jail within the last month. This is unusual. The following are brief notes of each.—

- (1) Male, age 40 years, a transport employé, says he began to take opium when on field service, and on account of catarrh, some 15 years ago began with a little; now takes 90 grains daily in two doses; this costs Rs. 4 a month, his pay is Rs. 10; he is in fair condition and in good health; weight 110 lbs.; is a Hindu.
- (2) Male, age 26 years, an opium-smoker, says he learned from friends (probably from prostitutes); is in good health and condition; weight 104 lbs.; works as a cap-maker; says his appetite and digestion are improved since he took to opium; smokes three times daily; is a Mahomedan.

*Surgn.-
Lt.-Col.
M. D.
Morizoty,
M. D.*
—
25 Jan. 1894.

- (3) Male, age 19 years; eats 12 grains daily in two doses; began five years ago on account of catarrh by advice of friends; appears a bad lot; is thin, but appears otherwise healthy; weight 89 lbs.; is a Mahomedan.
- (4) Male, age 38 years; takes 90 grains daily in two doses; began 20 years ago on account of rheumatism, and with one grain morning and evening; is a bazar labourer; does not appear to have suffered much in health; but says he cannot work like another man; is in fair condition; weight 119 lbs.; has a young family; a Mahomedan.

These four prisoners were kept under observation for about a week each; they got no opium that I know of; they suffered a good deal at first from aching pains, sleeplessness, prostration, loss of appetite, etc., but they soon came round. None of them got diarrhoea.

19401. Have you ever known habitual eaters of opium in injurious excess among the well-to-do classes who have suffered?—Yes.

19402. What symptoms did you notice?—They were generally very thin, and some of them very susceptible to cold; they are very much afraid of cold, and they are afraid of bathing. Beyond that I have not seen any ill-effects in well-to-do people.

19403. You do not think it shortens their lives?—I do not think so.

19404. Has your experience lain in a district in which there has been much dysentery?—Yes, a good deal.

19405. You have never seen any type or form of dysentery that you have associated with the opium habit?—No.

19406. What experience have you had of the use of opium in cases of malarial fever?—I have no experience of the consumption of opium as a febrifuge. In the west of this district the tract along the Jumna is notoriously malarious, but I have never heard of the people using opium either as a prophylactic or as a cure for malarial fevers. The same is true of the other districts in which I have served.

19407. You have never yourself prescribed it as a mitigator of the various evils of a malarial district?—No.

19408. You have never used it in combination with quinine?—I have.

19409. Do you think it enhances the power of quinine?—I have only used it in cases where there are special symptoms in connection with the case, such as diarrhoea with fever.

19410. You have not thought that it enhanced the febrifuge power of quinine?—No.

19411. Your experience has been gathered entirely in the district of Meerut?—No; the last three years only.

19412. In the North-West Provinces?—In the North-West Provinces I have served 16 years in different districts.

The witness withdrew.

SURGEON-CAPTAIN C. MACTAGGART, M.B., called in and examined.

*Surgn.-
Capt. C.
MacTaggart,
M.B.*
—

19429. (Sir William Roberts.) You are Superintendent of the Central Prison and District Jail at Agra?—I am.

19430. You are also in civil practice here?—Entirely jail practice.

19431. That has been the whole of your experience?—I have been four years in charge of a Central Prison; before that I was in Rajputana and for a short time in the Punjab.

19432. In what capacity?—I was in medical charge of a regiment.

19433. Not of dispensaries?—I was Civil Surgeon about four months.

19434. What has been your experience of the use of opium?—I have no doubt that it is largely consumed by almost all the Indian races, but I think the habit is most prevalent among Mahomedans. I believe that the vast majority of those who consume it do so with benefit, or at least without suffering from its use, either morally or physically; but I believe a very small proportion do consume opium to excess, and in such cases, i.e., when it is taken to excess, I believe that it has a prejudicial effect on the physical condition of the consumers.

19413. You have never encountered a popular opinion that opium was useful in malarious troubles?—I have heard so.

19414. I thought you said you have never heard of people using opium?—I have heard the question mooted whether opium was a prophylactic, but I never heard of the people themselves using it as such.

19415. Or having any belief in it?—No.

19416. (Mr. Wilson.) Do I gather from you that you would put the limit of excess somewhere about 25 grains?—I think a smaller quantity than that may be considered excess. I merely took that as an average.

19417. You say that on the 30th of October 1893 only eight prisoners admitted having taken opium regularly?—Yes.

19418. When you say "admitted," was there any reluctance on their part to admit, or any desire to conceal?—No, I do not think there was.

19419. We have had some evidence at different places that one of the reasons assigned for taking opium was as a protection against cold; your experience is that it rather tends to make people afraid of cold?—I think the habitual consumer is afraid of cold.

19420. I understood you to say that you had not prescribed opium as a prophylactic?—No.

19421. But that you have given opium and quinine as a remedy where disease actually existed?—Yes.

19422. (Mr. Fanshawe.) Is it not the fact that a relatively large number of opium shops in the Meerut district are situated in the tract along the Jumna and along the line of the main Ganges Canal?—I do not know.

19423. (Sir William Roberts.) You have been asked about the effect of opium and cold. I think you intended to say that the habitual excessive consumer of opium was sensitive to cold?—That is what I meant.

19424. There is another sense in which the question may be asked. Is it within your experience that people are in the habit of taking a pill of opium when the weather is very cold in order to protect themselves against taking cold?—That is not within my experience, but it is within my experience that they take opium when they have caught catarrh.

19425. I presume that you are aware that opium is the most common domestic remedy in India?—Yes.

19426. And do you think that on the whole it is used beneficially?—I think it is for the benefit of those who use it.

19427. (Mr. Wilson.) I suppose it is indisputable that those who are taking it regularly become more and more habituated to it; and, if so, is there a constant tendency to increase the dose?—I am not aware that there is a constant tendency.

19428. Would you say that there was more or less tendency to increase the dose and to pass from moderation to excess in opium or alcohol?—I should say that they were somewhat on a par.

19435. Do many use it in excess?—Not many. I find that in the jail in Agra out of 4,524 prisoners only 18 have been noted as excessive opium-eaters since January 1888.

19436. You mean those who take it to an injurious extent?—Yes, men who are noted as having suffered from the excessive use of opium when they came to the jail.

19437. I suppose the limit varies almost with each individual?—It is entirely a matter of idiosyncrasy; I cannot give any definite dose. By opium-eaters I mean opium-consumers.

19438. You say you have noticed several cases in which men admitted into the jail have been excessive opium-eaters and have suffered in health; in what way?—They generally show it by extreme emaciation—that is all you can say; there are no pathological changes as far as I know; they suffer from emaciation and general debility. In such cases I invariably stop their supply of opium at once, and after a few days of discomfort—in some cases very considerable discomfort—the patient apparently does quite well without the drug and rapidly gains health. I feel sure that opium, even when largely taken to excess, does not produce any organic disease or any pathological and tissual changes.

in the organs of the body, and in this it has an immense advantage over alcoholic stimulants, which certainly produce very grave organic disease when taken in excess. The emaciation seen in an immoderate opium-eater is probably due to the loss of appetite caused by excessive use of the drug.

19439. You have no experience of opium-eating amongst well-to-do people?—I have known one or two cases.

19440. Have they been cases of excessive consumption?—Yes.

19441. Were they thin and emaciated?—They were just in the same way.

19442. On the whole, what has been your experience of the effect of opium from a medical point of view?—With regard to the use of opium from a medical point of view, I believe that opium is by far the most useful drug in the country, with the possible exception of quinine, and among the inhabitants who are largely out of the reach of medical aid, it is the most important and effective domestic remedy in use. Almost all natives who take opium whom I have met have told me that they began to take opium first as a remedy for some disease, and finding they benefited by its use, continued to take it. It is very largely used by natives in asthma, chronic rheumatism, bowel complaints, and in cases of malarial cachexia accompanied by enlarged spleen and anæmia. I have frequently used it in similar cases and with benefit.

19443. Have you known of the existence of a belief amongst the people that opium was useful in cases of malarial fever?—Yes.

19444. Both as a protective and as a curative?—Yes.

19445. That has come within your personal knowledge?—Yes.

19446. Have you found opium useful as an addition to quinine in malarial diseases?—In cases of anæmia with enlarged spleen and chronic diarrhoea such as I have fre-

quently seen in jail hospitals, opium with quinine I believe is the best remedy.

19447. What is your opinion as to the usefulness of opium in malarious tracts?—To the inhabitants of malarious tracts I believe it to be a necessity, and it undoubtedly renders many men capable of doing their daily work who without it could do absolutely nothing.

19448. (Mr. Wilson.) You have several times used the phrase "I believe." Do I gather from that that what you are giving us is not so much facts within your own knowledge as the general impression that you have gained?—No. What I have stated is founded on facts that I have myself observed in connection with the jails.

19449. Are you speaking chiefly of observations in jail or on the general population?—Chiefly observations in jail.

19450. You have spoken of malarious tracts; to what malarious tracts are you specially referring?—I refer to Aligarh, Muzaffarnagar, Bulandshahr, Gorakhpur and Azimgarh; I have had prisoners from these tracts, all of them malarious.

19451. You have not been stationed there?—No.

19452. You have gathered your information from the prisoners?—From what they have told me.

19453. That it has that effect?—Yes.

19454. Do you gather from what they said that opium has that effect, or that they believe it?—They believe that it has that effect.

19455. Does their own condition warrant that?—Yes, I think all these men are in fairly good condition, considering the districts they come from—men who have been habitual opium-eaters.

19456. (Mr. Fanshawe.) When you say that the opium habit is most prevalent amongst the Mohammedans, I understand you are referring to your experience at Benares and Agra?—Yes.

The witness withdrew.

Mr. J. S. MESTON called in and examined.

19457. (Chairman.) I believe you have been employed as Settlement Officer of Budaun in the North-West Provinces?—I have been employed as Assistant Settlement Officer and Settlement Officer since 1889. I have been in an opium-growing district as Settlement Officer for nearly a year. I have inspected for settlement purposes a number of villages where poppy is grown, and can testify that, in tracts where poppy cultivation is allowed, land in which poppy is grown requires in time, if held by non-privileged tenants, a rental value of 50 per cent. more than the rental value of land on which other crops are raised.

19458. Have you any figures to support that?—I have.

19459. Will you give them?—In the inferior tracts of the Budaun districts Rs. 5 per acre is the ordinary rate for good land held by tenants without statutory rights of occupancy. For similar tenants, when they grow poppy, cane, or one or two other special crops Rs. 7-8 per acre is the usual rental rate. In the superior tracts the usual rental rate for millets, cotton, wheat and barley (the ordinary crops in the district) is Rs. 7-8 per acre. For poppy it varies from Rs. 15 to Rs. 20 per acre; and if the poppy is preceded by an autumn crop as much as Rs. 25 per acre may be realized. Sugarcane, as a rule, pays Rs. 15 per acre in those tracts; but sugarcane has to be practically three times as long in the land as poppy. Those are partial reasons why poppy is with the rent collector or landlord a more popular and favourite crop than others.

19460. Have you any other information on the same lines?—As regards the popularity of the crop with the cultivators, I may state that in good years in average land the poppy outturn may be taken as from $7\frac{1}{2}$ to 14 seers (from 15 to 28 lbs.) per acre; and at Rs. 5 per seer the income to the tenant from the crop would be Rs. 37-8 to Rs. 70 per acre, exclusive of the value of the heads, the seed, the oil extracted from the poppy heads, and other refuse that might be used for fuel. Altogether I estimate the total value in a good year in average land as from Rs. 46-8 to Rs. 83-8 per acre. In exceptionally good land nearer large towns it is possible to get from 15 to 20 seers per acre, but that of course is an exceptional outturn. Against an income of from Rs. 46-8 to Rs. 83-8 per acre we have a rental demand of from Rs. 15 to Rs. 25 per acre. Another reason for the popularity of opium with the cultivator is the fact that the crop requires no expensive

machinery to turn out the produce which is ultimately sold in contradistinction to sugarcane, the completion of the product of which is always necessarily an expensive operation.

19461. Do you consider that the price which the Government pays to the cultivator for his opium is an adequate price?—I consider it distinctly an adequate price.

19462. (Mr. Pease.) Has there been much alteration in the acreage under poppy in the district to which you refer?—There has been an increase within the last ten years from 7,000 to over 11,000 acres. The last return I have of the area under poppy is 11,500 acres for the district of Budaun.

19463. In what year has the increase been?—I have not the actual figures, but I believe it has been gradually within the last ten years.

19464. Do you know what the average crop per acre has been?—I cannot give the actual figures, but I believe it is from $7\frac{1}{2}$ to 14 seers in average good land.

19465. You say that it averages over the whole district about $7\frac{1}{2}$ seers?—I would not say that; I have not the figures to speak upon that point.

19466. Is there a great desire on the part of the ryots to increase the amount of their poppy land?—I am not aware that there is: I have heard of no applications.

19467. If it was so extraordinarily profitable as compared with other crops, would not that be the case?—Poppy is mainly in the district to which I refer (I have experience only of that) in the hands of one caste, and the growing of poppy by other castes is for various reasons unpopular, the principal reason being that it is almost entirely grown in richly manured land immediately surrounding a hamlet, and the high castes will not take up that land on account of the filthy character of the soil.

19468. (Mr. Mowbray.) I understand that those figures are the figures on which the land revenue of this district has been settled and is now being collected?—They are the figures on which I am preparing the revised land revenue.

19469. On which you are preparing your estimate?—Yes.

19470. (Mr. Fanshawe.) The class of cultivators who cultivate poppy is chiefly the market gardener class?—Yes.

Surg.
Capt. C.
MacLaggart,
M.B.
25 Jan 1894.

Mr. J. S.
Meston.

- Mr. J. S. Meston. 19471. What are they called in the Budaun district?—Kachis or Muraos, in Budaun generally.
- 25 Jan. 1894. 19472. Is it the rule in the Budaun district that a crop of maize should precede the poppy crop?—Extremely common.
19473. We have been told that on market garden land tobacco would probably be the chief substitute for poppy; would that be according to your experience?—Tobacco is grown in similar land, but I have constantly found that

it is grown, so to speak, under the eaves of houses, whereas poppy can be grown in a wider circle. I do not think there would be the same market for tobacco.

19474. So far as you know there is no likelihood of a general extension of tobacco cultivation?—Not so far as I know. There is no restriction of tobacco cultivation at present, and there is no reason why there should be any special extension coincident with a cessation of poppy.

The witness withdrew.

Adjourned to to-morrow at 10-30.

At Agra.

FIFTY-SIXTH DAY.

Friday, 26th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMEESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. U. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VECHARIDAS DESAI.
" J. H. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

DR. R. GLYN GRIFFITHS called in and examined.

Dr. R. Glyn Griffiths.
26 Jan. 1894.

19475. (*Sir William Roberts.*) You are, I understand, Chief Medical Officer of the East Indian Railway?—Yes.

19476. Where do you live?—At Allahabad.

19477. How long have you had medical charge of the workmen on the East Indian Railway?—Nearly twenty years.

19478. You would also have charge of them when they were invalided, both as in-patients and out-patients?—Yes, both.

19479. What is the number of the employés on the East Indian Railway?—The native employés average about 45,000.

19480. From what districts are these men drawn?—From all parts of India, Agra, Behar, Oudh and Bengal.

19481. What is the average age of these men?—We take them on from the age of 18 up to 25. They get a first-class certificate if below 35 years of age; if over 30 years of age they get a second-class certificate.

19482. I suppose the average age of the men actually would be something like 35 or 40?—35 or 38, I should say.

19483. Are any of them in the habit of using opium?—I know it to be a fact that a great many of them eat opium.

19484. What is your impression as to the percentage of those employés who eat opium?—It would be very difficult for me to give the percentage, because I can only speak of what I have personally seen of in and out-patients at hospitals. One of my native doctors informed me that in some districts about one per cent. of the people eat opium.

19485. Of the total population?—Yes, in the Benares and Dinapur districts.

19486. That would make something like 10 per cent. of the employés on the railway?—More than that.

19487. According to your experience, have they generally been temperate users of opium?—Very temperate; they take a certain quantity and do not increase it.

19488. About how much?—I have seen some take from 2 to 4 grains a day. I know others to take from 15 to 30 grains a day, and not to go beyond that.

19489. Have you observed any effect on their health or capacity for duty?—No, not any injurious effect. I know of a signaller, over fifty years of age, now in the Mogul Sarai district. He has been taking 15 grains a day for about twenty-five years, and he is one of the best signallers on the line.

19490. I presume that, like other witnesses, you recognize great individual differences of tolerance of the opium habit?—Undoubtedly.

19491. An amount that would do one man an injury would not affect another one?—No.

19492. Have you ever noticed whether a larger number of opium-eaters would be invalided than of those who were not opium-eaters?—During the twenty years I have been out here I have never seen a single railway employé invalided owing to the use of opium.

19493. Have you known of any of the employés being dismissed on account of the abuse of the opium habit?—Not a single one on the whole railway in the last twenty years has been discharged or incapacitated through opium-eating.

19494. Why do these men take opium do you think?—Some of them take opium to relieve malarial fever. Years ago I was in the Dinapur district, at a place called Simultola, a very malarious place, where we could scarcely keep a signaller more than six weeks or two months owing to their getting a fever or enlarged spleens. Men in the habit of taking opium went to relieve them, and I found those men who took opium were not so susceptible to fever as those who did not take opium. Not nearly so.

19495. For what other purposes do you think men take opium?—For asthma, dysentery, rheumatism and colic. It is a very common thing for dysentery, fever, and rheumatism.

19496. Those are all medical uses, are not they?—Yes

19497. Have you any knowledge of the use of opium amongst these men for non-medical purposes?—I mean as we have beer or wine or tobacco?—I had an old man over eighty years in hospital last year. He was an opium-eater, taking 15 grains twice a day. I asked him how long he had been taking opium, and he said a little over 40 years, and it never did him any harm. To look at him I could not have said he was an opium-eater. He was in robust health for a man of his years.

19498. (*Mr. Pease.*) What is the cost of 15 grains of opium?—About two pice.

19499. And what would be the wages of the signaller who took 15 grains of opium a day?—Rupees 8 to Rs. 10 or Rs. 12 a month.

19500. (*Mr. Wilson.*) You have referred to the case of two or three persons who were in the habit of taking opium

in large quantities. I presume that as a medical and scientific man you do not attach any real importance to individual cases unless there is a sufficient number of them to establish some statistical proportions?—We know it is a very universal thing amongst these men to take opium.

19501. You would not, in England, for example, endeavour to establish any general rule or principle in regard to the use of alcohol by an individual case or two of persons who had lived to a great age of either with it or without it?—If there was only one person, perhaps I should not.

19502. I ask you whether you wish to attach importance to these cases you have mentioned by name?—Undoubtedly I do, because when a man has been taking opium over 40 years and lives to the age of 80, it cannot have done him any harm, and possibly has done him a great deal of good. It may have kept him from getting fever, which would have weakened his constitution. It undoubtedly prevents attacks of malarial fever out here.

19503. I am afraid I have not made myself clear. What I want to ask you is, is it not the case that many of us know cases of persons who have pursued for many years a course of life or diet which no one could approve or recommend, who has nevertheless lived to a good old age?—There are exceptional cases.

19504. You mentioned a case at Dinapur: you have been stationed at Dinapur?—Yes; ten years.

19505. What was your experience there in connection with this matter?—A great number of people took opium there.

19506. With what result?—I have never seen any bad result from it—never.

19507. Did you think it tended to keep them healthy there: do you allude specially to Dinapur as a place which throws some light on this subject?—It is a great place for the cultivation of poppy. Opium is easily obtain-

able there and cheap. A great number of people eat opium in that district, and I have never seen any bad effect from it.

19508. Do you think that the cultivators retain portions for their own use?—Yes, I do.

19509. You mentioned the case of signallers at very unhealthy stations: were those signallers supplied with quinine or any other medicine of that kind?—Years ago it was exceedingly difficult to get natives to take European medicines. They would not touch them. Sixteen or eighteen years ago I could not get a single employé to take quinine or European drugs in that district. Now they know the value of quinine, they take it.

19510. In these unhealthy places are they supplied with quinine?—They are now.

19511. With opium?—No, not with opium. They supply themselves with that.

19512. But the company supplied them with quinine?—Yes.

19513. (*Mr. Mowbray.*) Do you consider the two cases you have mentioned as typical of a very much larger number you could mention?—Yes.

19514. Do you consider that the fact that even two men have been able to take this quantity of opium without shortening their lives proves that opium is not a poison in the popular sense in which the word is used in England?—No, not to natives.

19515. (*Mr. Haridas Voharidas.*) You have observed many cases of individuals taking opium who have reached old age: have you noticed people who have reached old age and have not taken opium at all.—I mean have you noticed in the same way that you noticed opium-eaters attain old age people who have not used opium attain old age also?—Yes.

19516. Have you noticed employes on the East Indian Railway dismissed for abuse of alcohol?—Yes; a great many.

The witness withdrew.

Mr. T. STOKER recalled and further examined.

19517. (*Chairman.*) You are Commissioner of Excise for the North-Western Provinces and Oudh?—Yes.

19518. Would you give us shortly the nature of your former service?—For twelve years I belonged to the district staff as Assistant Collector, Joint-Magistrate and Acting Collector. During this period I was almost continuously in charge of district excise administration in various parts of the North-Western Provinces. I next served for two and-a-half years in the North-Western Provinces Secretariat as Under-Secretary and Acting Secretary. I was then appointed Settlement Officer of Bulandshahr, and held that appointment for three and-a-half years. Since return from furlough in November 1891, I have held the appointment of Commissioner of Excise and Stamps and Inspector-General of Registration for the North-Western Provinces and Oudh.

19519. Your long and varied service has, I presume put you into a position to form a judgment upon the question with which we have to deal, and brought you into intimate contact with the people of the Province in which you have resided?—I have served in or visited all parts of the North-Western Provinces and nearly all of Oudh. I have been for many years in intimate contact with the people of those provinces, and am acquainted with their habits and conditions of life. I have paid special attention to excise questions.

19520. At a former meeting of the Commission you placed in our hands a memorandum of the opium administration of the North-Western Provinces and Oudh. That will be before us for our careful consideration, and will be printed in the appendix. Speaking briefly, I think you have sought to show in that memorandum that the price of excise opium has been advanced from time to time to as high a standard as it was possible to maintain having regard to the risk of smuggling and illicit consumption?—Precisely.

19521. The price is at present, is it not, Rs. 16, and that shows a profit to the Government something like Rs. 7 a seer, does it not?—The price at present varies in different parts of the province from Rs. 18 in the Western districts to Rs. 16 in the Eastern districts. The profit of Government varies accordingly.

19522. In all cases you have endeavoured to make it

as high as possible?—Yes. I may add, perhaps, that the present prices are experimentally fixed, and subject to any further enhancement that may be found possible when we have had a little experience of the present sale.

19523. One of the results of the policy that has been pursued is to show a development of excise revenue, and I understand it to be one of the purposes of your memorandum to show that that development of revenue does not establish of necessity an increased consumption per head of the population, but is rather due to a better administration and a more effective prevention of the supply and consumption of illicit opium?—Quite so. Chiefly the increased recorded consumption is due to administrative checks placed upon the use of illicit opium. But I myself attribute the increased sales of excise opium to more causes than one. The chief cause undoubtedly is better administration; another cause is the advance in prosperity of the provinces which enables the people to spend more upon excisable commodities. I say this because the increase in revenue has not taken place merely under the head of opium, but there has been a larger increase under the head of other excisable commodities.

19524. You have shown in your memorandum, I believe, that Government have consistently held that *shandu* and *madak* are noxious drugs, and that everything practicable should be done to check the consumptions. You refer to Sir Alfred Lyall as having been desirous of doing all that was possible to check the increasing consumption of these pernicious drugs; and then again in another passage, say, "the avowed policy of the Government is to check in every way the consumption of these noxious drugs, always provided that illicit vend and use are not fostered thereby."?—The policy of Government in the matter of opium-smoking has always been distinctly repressive. I have shown in my memorandum that for many years Government tried the policy in these provinces of absolutely refusing to recognise the habit, or issue licenses for the sale or consumption of opium prepared for smoking. That policy was found not to be successful in checking the habit, and from 1864 the opposite policy was tried of bringing the habit under restriction and control, and making it expensive by levying license-fees. For the last year that policy has again been reversed, and the original policy of prohibition has been adopted.

Dr. R. Glyn Griffiths.

26 Jan. 1892.

Mr. T. Stoker.

Mr. T.
Stoker.

26 Jan. 1894.

19525. The reason for that step was, I think, that the licensed shops might be replaced by unlicensed ones, and that opium-smoking would still continue, and that there might thus be a risk that the absence of publicity might encourage the vice in domestic circles?—Undoubtedly that is the danger recognised by everybody connected with the administration.

19526. And you have looked to that, on the one hand, and also to the consideration that it is an evil thing for a Government to give any sort of recognition to a bad practice?—All these considerations have been borne in mind.

19527. In looking at what we may call the opium habit, do you draw a clear distinction between opium-smoking and opium-eating?—In considering the question of consumption a very clear distinction should always be observed between opium-smoking and opium-eating. I have nothing to say in favour of opium-smoking. Speaking of these provinces I regard it as a low and vicious habit, practised, broadly speaking, by low or by vicious people. It would be unreasonable to say that any physical or moral deterioration which may have been observed in opium-smokers is necessarily due altogether to that particular practice, and not to other demoralising habits and associations or physical infirmities. I observe that in other countries, or even in other parts of this country, opium-smoking is said on good authority not to be necessarily attended with bad consequences. Possibly different races or constitutions are differently affected, or the opium is differently prepared. But in these parts people who pursue the habit do in my opinion often or generally suffer from it or its surroundings. The policy of the Government of the North-Western Provinces has always been directed to repress and check the practice, and has been attended with success. Though it gained an impetus about twenty years ago, from the introduction of the Chinese method, opium-smoking is still restricted to a comparatively small portion of the urban population, and is very far from being a general or domestic habit even in towns. In rural parts it is practically unknown. Probably not so many as one in every 10,000 of the whole population ever smokes opium. Opium-eating stands on quite a different footing. Though liable to abuse and sometimes abused, it is certainly not a vicious habit. A large part of the opium consumed in these provinces is taken as medicine and only as occasion requires. Even of habitual consumers the greater portion commence the habit for the relief of pain or disease, and continue it because of its beneficial effects. The number of people who commence or continue to eat opium simply for the pleasure it affords them form, I believe, only a small proportion of the whole body of opium-eaters. Opium-eating as a regular habit is very often commenced late in life, when the failure of the natural powers is supposed to indicate the need of a corrective. This circumstance has not been noticed in the case of stimulants or narcotics taken for vicious or merely pleasurable purposes. The vast majority of opium-eaters are occasional or moderate habitual consumers. Habitual excess is rare. In these matters excess is a relative term. By it I mean a quantity so large as to produce physical or mental deterioration in the person using it. I cannot recall any such cases in my personal experience. I have heard of them and believe they occur. But I have at different times had a large staff serving under my immediate observation, and I do not remember any instance of an official unfitted for work by the habit of opium-eating. For instance, in the Bulandshahr district, where the consumption of opium is large and general, I had the whole district staff of village accountants (536 in number who belong to the opium-eating classes) from time to time in my office working against time, under close supervision, and keeping long hours. Not a man was found unfitted or disqualified by reason of the opium habit, though there must have been many opium-eaters among the number. This, and like experiences which every officer can cite, seem to me to prove that the people of these provinces, or even those classes of them who eat opium, are not ordinarily or generally demoralised thereby. To say that the habit is widespread among the people, and that it produces mental and physical decay, social ruin, crime, suicide and early death seems to me a proposition that carries its own refutation. If these premises were true, the people of these provinces, where opium-eating has been practised for centuries, would have long ago been reduced to a few survivors of a ruined community. But so far from being this the provinces have been steadily increasing in population, wealth and material prosperity. All classes use opium. It is, I should say, the most generally used medicine known to the people. Habitual consumers are most usually found among the upper classes, and oftener among Mahomedans

than Hindus. This is ascribed to the prohibition of liquor by the Mahomedan religion. Conversely the lower castes of Hindus, who are the chief consumers of alcohol, are not believed to be addicted to opium. The fighting, landowning and trading classes include many opium-eaters, perhaps most of the habitual consumers, and its use is not unknown to the priestly castes. The Marwaris, the most astute of our traders, are well-known opium-eaters. I have known the occurrence of a large Marwari festival account for an increase in the district consumption of opium for the year. Their connexion with Rajputana may account for the prevalence of the habit among them. Consumption is much larger among the urban than the rural population, and is, I think, proportionally pushed to an excess more often in towns than in the country.

19528. Have you any reason to suppose that the extent to which opium is consumed depends upon certain characteristics of race?—I doubt if the habit is a racial one. It seems to depend more on locality and surroundings, caste or social position. Our races have now got very mixed; but so far as a distinction of the sort can be drawn, I should say that the aboriginal races are not given to opium (except as a medicine), but that its use is more general among the Aryan races. This is probably a matter of tradition. The consumption of opium is more general in the western districts of the Meerut, Agra and Rohilkhand Divisions than in the eastern parts of the province. The difference is not so great by any means as the recorded consumption would indicate, for the eastern districts are the home of poppy, and therefore the facilities for illicit consumption are greatest there. But allowing for this, I have still no doubt that the habit is more common in the west. It is precisely in those same districts that the people possess the finest physique and the most martial character, and enjoy the greatest prosperity. Opium is largely used in malarial tracts for therapeutic purposes. It is an article of belief among the natives of such tracts that opium averts and cures the diseases which result from cold and damp. I have no reason to believe that it acts directly as an antiperiodic like quinine. But I believe it is usefully and effectively employed in other diseases which proceed from the like conditions. Malaria, to speak in a popular sense, does not show itself always in the shape of remittent fever. It is Protean in its forms and finds out the weak point of each man. In some it develops rheumatism or cough, or asthma or bowel-complaints. For all these opium is used with beneficial effect. Possibly it may mitigate disease by assisting the natural functions of the body and so improving the general health and enabling the user to resist adverse influences. But whatever the scientific explanation may be, it is unquestionable that natives regard it and use it as a prophylactic and cure of diseases, which prevail in malarial tracts. It was observed, many years ago, that the use of opium increased in those parts where the introduction of the Ganges canal had artificially raised the water-level and produced insanitary conditions. I may add that I had occasion, some time ago, with reference to the re-allocation of the opium shops in various districts of the province, to cause a map to be prepared of the Meerut district, showing the allocation of the various opium shops in the district; and I was struck with the circumstance that the shops are all grouped either along the low lands of the Jumna, which is a notoriously malarial tract, or along the line of the main Ganges canal, where the rise of water-level has been most marked, and malarial conditions are most prevalent.

19529. Have you observed any tendency to increase the dose?—It would not, I think, be correct to say there is no tendency to increase the dose, which naturally begins with very minute quantities. But the increase is, not continuous. In some cases it reaches a large amount, and the native constitution seems very tolerant of opium. But such cases are the exception. Ordinarily when a certain and not extreme point is reached, the desire or means of increasing it fail. An ordinary native of the humbler class cannot go on increasing his dose, if for no other reason because his means of procuring it do not go on increasing. To say that the people of these provinces ruin themselves and starve their children to gratify their craving for opium is to ignore facts, and to slander the national character. If it were true, there would be a well-marked and recognised class of ruined opium-eaters, and the progress of the population would be checked. There is no such class in these provinces, and the population goes on increasing. The people are conspicuous for their domestic virtues. In love of parents for children and respect of children for parents, they surpass, I believe,

all European nations. No one who really knew and properly valued the native character would believe that a people with their strong paternal instincts is capable of starving its children, or in fact does starve them. Excluding always preparation of opium for smoking, it is my belief that of the various excisable commodities used in these provinces, opium is attended with greater benefits than any. If it is not attended also with less evils, it at least takes rank in this respect with the best of its rivals, and I have no doubt whatever that in the balance of good and evil opium stands easily first.

19530. Do you think it practicable to prohibit the use of opium for other than medical purposes?—The idea of prohibiting the use of opium is, in my opinion, a mere chimera. No person acquainted with the administrative possibilities of the provinces could imagine such a measure practicable. It is not conceivable that any rational and civilised Government would contemplate so cruel a measure as to absolutely prohibit the production of an article which, whatever its abuses may be, has done more, perhaps, than any other product of nature to alleviate human suffering. If the cultivation of the poppy is permitted at all, it would be quite impossible to prevent the diversion of its produce to purposes other than therapeutic. Even under present conditions, with the cultivation strictly controlled by a large special staff and with its sale a Government monopoly enforced by severe penal laws, it is found impossible to prevent the illegitimate abstraction of a large amount of produce for private use or sale or the introduction of contraband foreign opium. If cultivation were prohibited, the administrative machinery would be unequal to preventing altogether the surreptitious growth of poppy. And, finally, if such a result could be achieved, opium would still be freely smuggled in from the foreign States which lie along half our borders. No one who knows the character of the agency and measures which would have to be employed could fail to be appalled by the prospect of the vexatious espionage, the irritation and petty tyranny which would be entailed on the people. No one whose interests are bound up with the permanency of our rule could calmly contemplate the effect of such measures on the feelings and loyalty of the population. It should be unnecessary to add that the discontinuance of the present Government monopoly and control of cultivation would place opium at a largely reduced price in the hands of everyone who wanted it, and remit to the body of consumers the substantial taxation which they now pay. Taxation, too, which it would at once become necessary to impose on some one else. Briefly, prohibition would be impossible, to attempt it dangerous; while control and restriction could not be as well secured by any other system as the present one. It would be irrational to suppose that the people at large would willingly bear the enormous direct and indirect cost of prohibition. The mere proposal of such taxation would be attended with grave and dangerous discontent. I fear that even the progress of the present enquiry has already had an unsettling effect. That more popular feeling has not been already excited I attribute to the circumstance that the vast body of the people seldom hear of or seriously consider such movements till they are decided and forced on their attention in a practical fashion. The objects of this movement are liable to misconstruction by the people whom it reaches. They find it so impossible to appreciate, or understand the motives of those who have promoted it, that I believe grotesque theories are invented to explain it. Grotesque as they may seem to strangers, such theories are apt to be fraught with danger to the public peace. They tend to further unsettle men's minds, and if they become associated with the idea of a religious propaganda they threaten consequences which it is scarcely safe to discuss.

19531. Do you recognise it as practicable to confine the use of opium to strictly medical purposes?—The proposal to confine the use of opium to strictly medical purposes will not bear examination. It could only be made by persons who ignore the conditions of native life and society. No medical agency exists in this country which could be used for the purpose. The Government dispensaries reach only a minute percentage of the population. Private practitioners trained in European methods are available to only an absolutely infinitesimal number. They and the chemists who would make up their prescriptions exist only in a few large towns. Besides they charge prices which would place opium out of reach of all but wealthy people. The bulk of the population live and die without any other medical aid than they can obtain from the village Vaid or Hakim. These medicine-men cannot be seriously treated in the light of qualified physicians. But if they are to be so regarded and to be allowed to possess and dispense opium, this measure will

amount to granting a retail license in every large village. The village medicine-man will be turned into an opium vendor to his own substantial profit and the loss of revenue. In short, to confine the sale of opium to medical purposes would be to either deny it altogether to the people, or to vastly multiply the present facilities for obtaining the drug. Our rules at present permit the grant to druggists of free licenses for the purchase and possession and sale of opium in the shape of medicine. There is at present only one such license in these provinces held by a European chemist in Lucknow.

19532. Have you any observation to make with reference to the licensing system now in force?—The memorandum now laid before the Commission shows that the licensing system now in force has been adopted as that best suited to secure the control and taxation of the use of opium. Different methods have been tried in these provinces both in regard to opium and other excisable commodities. Experience has shown the best method to be a system of fixed duty combined with licenses for sale at localities determined by the authorities and submitted to public competition. The fixed duty secures a minimum taxation, and the variable license-fees, differentiating the value of the various shops, secure to Government the profits which would otherwise accrue to the favoured monopolist. Almost every other possible system has been tried in our excise administration; and that now in force has been found from experience open to the least objection. To say that it unduly fosters the sale of excise opium is to ignore facts. The figures now laid before the Commission show that there is in these provinces one opium shop for every 45,053 of the population and for every 104.7 square miles of territory. The recorded consumption shows 21.6 grains per head annually. I believe this is not one-fourth the incidence of the opium imported into the United Kingdom every year.

19533. Can you give us any information as to the probable daily consumption of ordinary opium-eaters?—It is very difficult to estimate what the daily consumption of an ordinary opium-eater is. In a recent report I thought it might be as much as $1\frac{1}{2}$ mashes ($22\frac{1}{2}$ grains); but further inquiries lead me to believe that this is too high. Probably one *masha* (15 grains) would be nearer the mark. A very large part of the opium consumed is used for medicine. But even if the whole amount were used by habitual consumers for non-medical purposes, the opium sold would at the rate of 15 grains a day allow under four moderate opium-eaters for every thousand of the population.

19534. What is your view as to the effect of the opium consumption in these provinces upon the moral condition of the people?—These figures seem to me to controvert any idea that the present system is productive of widespread public demoralization.

19535. Can you give us any considerations with reference to the general effect of the poppy cultivation on the material interests of the people concerned?—I understand that statements have already been laid before the Commission showing the extent of the interests involved, the number of persons concerned in the poppy cultivation and the manufacture of opium, the amount of money given as advances or in payment of opium, and the total value of the produce. But it may be well to point out some peculiar advantages of the poppy cultivation. It is a convenient crop which fits in with other agricultural operations. It matures at a time when the cultivator has leisure from his other crops after the sugarcane has been pressed and the cold-weather crops irrigated, and before the spring harvest begins. It admits economical methods of rotation. It can follow a rains crop of maize, and it is off the ground in time to allow a hot-weather crop to be put in. The cultivation of the plant and collection of the opium affords a suitable light occupation for the wives and children who share field-labour with the men. It yields a quick and large profit. The Government advances are a great attraction to the poorer cultivators, who would otherwise have to resort to the village usurer with his enormous interest. In fact, the Opium Department practically acts as an agricultural bank. In the case of opium alone the cultivator finds a certain market with a fixed cash price paid on the nail. Moreover, the effect of the large payments is to release enormous sums from the Government treasuries, assisting the agricultural classes to meet the demands of rent and revenue and benefiting all classes by the increased circulation of money. To ascertain the full effects of a prohibition of poppy cultivation it is necessary to look beyond merely the total figures. It would fall with ruinous results, not merely on particular districts, but on particular villages in those districts, and particular classes of cultivators. Poppy is a crop specially suited to small

holdings where a large return has to be gained by minute and laborious cultivation of a small area. It is, therefore, particularly suited for those parts of the province where the population is most dense and the pressure on the land is greatest. It is a poor man's crop, most valuable to the most skilful and industrious cultivators, who at the same time possess the smallest resources. Deprived of it, these men would be unable to pay their present rents or would sink into a lower grade.

19536. Do you consider that any other crop could advantageously take the place of poppy?—No other crop could be named which possesses all these advantages and would therefore be a complete substitute for poppy. Sugarcane, which is often named, requires more expensive appliances and large capital. Its return, even if so great, is not so quick. It occupies the ground two or three seasons, and it cannot be grown in places where poppy will flourish. In some places even superstition is a bar to its cultivation.

19537. Have you found in your experience that there is a general willingness on the part of the ryots to cultivate the poppy?—So far from any pressure being necessary to secure the cultivation of poppy, the prohibition of it would be regarded with terror and dismay. I have served in four poppy-growing districts, and can testify to the popularity of the industry. I have never heard of any exercise of authority being necessary or being invoked to get the plant sown. In fact it would be impossible for the Opium Department to use such pressure, for its officers have no power to do so, and they stand quite apart from the general administration of the provinces, being subordinate to the Bengal Government. I have on the other hand heard many objections from cultivators who were refused permission to grow poppy, and I have reason to know that prohibition is regarded as a severe punishment.

19538. How would the prohibition of poppy affect the interests of the owners of land?—In several districts of these provinces the rents and land revenue would have to be revised if poppy were discontinued; in many districts the income of proprietors would be seriously affected, and whole bodies of cultivators would be reduced to a lower status. I have prepared a statement showing for these provinces an area under poppy, the outturn, the value of the produce, an estimate of the cost of cultivation, and of the profits to the cultivator, together with figures showing the relation that the profits of the poppy cultivation bear to the total rent and land revenue of the provinces.

19539. Can you give us the result in a few figures?—Yes. Poppy occupies only 1·6 per cent. of the cold weather area, and 8 per cent. of the total crop area. The value of the outturn amounts to 17·8 per cent. of the tenants' rental, and 38·4 of the land revenue of the provinces. The total value of the outturn is Rs. 1,45,64,234.

19540. (Mr. Moubray.) When you say the total value of the outturn, do you mean the total sum of money paid by the Government to the cultivators?—No; including the value of the bye-products, seed, capsules, etc.

19541. The price paid by the Government plus the price received by the cultivators for bye-products?—Yes. Details are given of both in the statement. The total value as paid by the Opium Department is Rs. 76,96,604. The total value of the bye-products is Rs. 68,67,630. This statement has been framed to show the minimum average profit to a cultivator entirely employing hired labour. It is subject to considerable modifications, very large modifications, in the case (which is generally the case) of cultivators who employ only the labour of themselves and their families at the work. The net result is, that a tenant who entirely employs hired labour and cattle, and takes himself no share whatever in the work, gains a minimum net profit of Rs. 16 an acre; and the tenant who works the poppy by his own labour and that of his wife and family gains a net profit of Rs. 44 or Rs. 45 an acre. In making out this estimate I have framed it so as to show the cost of cultivation at its maximum and the outturn at its minimum.

19542. (Mr. Pease.) You stated that you observed the greatest number of opium shops were in the low-lying districts: are not those districts where the poorest class of population live?—No; on the contrary in the Meerut district, which I cited, the Jumna low lands are about the richest part of the district, possessing an exceptionally fine and wealthy population.

19543. These were opium shops in the country districts?—Yes, in the rural parts of the district.

19544. Then do you think that persons take opium as a prophylactic who have never had any disease, or is not rather that they take it either to cure the disease, or while

they were ill they got into the habit of taking it and continued taking it?—I think the majority of people do not take it until they require it, and I think a great many people who commence it for the purpose of alleviating a specific disease continue it.

19545. Therefore it is not strictly taken as a prophylactic; it is taken first to cure an ailment?—Yes, and afterwards to prevent its recurrence. In that sense it is a prophylactic. A special case came to my knowledge, only a short time ago, of a resident in a malarious tract applying to the Collector of the district to make arrangements for the sale of opium in that part of the district for the cure of colds and coughs, etc.

19546. You say that you think probably that one *masha*, or 15 grains, would be nearer the mark than the quantity you have given before: do you not think you may be very possibly exceeding the mark?—I think it may be high. I should be very sorry indeed to dogmatise about it. I have made very careful enquiries.

19547. The evidence we have had with regard to the Sikh soldiers shows that they were in the habit of taking about 3 grains?—I was struck by that.

19548. Therefore if you were to take 3 grains instead of 15 grains it would give twenty opium-eaters per thousand?—Quite so. I myself find the greatest difficulty in framing to my own satisfaction any very accurate estimate. It varies very much from individual to individual and from place to place. Perhaps if I were to explain my method of inquiry, it might throw some light on the subject. I have myself frequently gone and sat in the opium shops, and watched the classes of people who purchased opium and the amounts they purchased, and I have questioned them as to whether it was for their own use or for the use of their friends, or family consumption. I have also consulted officers in all parts of the province, both European and Native, as to the average amount of opium consumed by an ordinary moderate consumer. I have received most conflicting replies, and my own observations have given me most conflicting results; but averaging them I have come to the conclusion that the nearest I could put it is 15 grains. But I am quite prepared to modify that on any further evidence being shown.

19549. Would you rather not come to the conclusion then that there hardly was any dietetic use; that if the number of the greatest estimate was put down at 20 per thousand, then it would be almost practically a medicinal use in this district? I think that is the case. The proportion who use it for medicinal purposes is far in excess of the number of people who use it for any other purpose.

19550. (Mr. Wilson.) You have said "to say that the people of these provinces ruin themselves and starve their children to gratify their craving for opium is to ignore facts": would you be so good as to tell me where or by whom that has been said?—It was said before this Commission by a witness at Calcutta—by Bishop Thoburn. I find in Bishop Thoburn's evidence: "I think that the worst evil of the habit to-day is that it is starving millions of the children of India." Again he states in another part of his evidence that he is speaking of the North-West Provinces when he states that the opium habit is starving millions of children.

19551. Could you give me the number of the question you are reading from?—2253.

19552. Would you also look at 2342. Do you not find there that this question was put to him: "Is the opium habit even now so widely spread in those provinces that millions of children can be said to be starved, even accepting your view?—Not merely in those provinces, but I speak of the 284 millions of India?"—Yes, I see that.

19553. And he went on in the next question but one: "I was speaking of all India?"—Precisely. I also observe he speaks of his knowledge of the North-Western Provinces, and I speak merely on behalf of these provinces.

19554. In using the general expression about millions he was speaking of the 284 millions of India?—Quite so, but my remark is equally applicable if he had said thousands or even hundreds, instead of millions.

19555. You speak about the love of the parents for their children, and you think they would not be likely to starve them: I suppose you know enough about the condition of London and other parts of England to know that many people who love their children are really poisoning them with gin unintentionally and thinking it does them good?—I know little of London; I know in Ireland they do not poison their children with whisky.

19556. In reference to the grant of free licenses to druggists, can you explain why only one person in the whole of

the province avails himself of the opportunity of taking this druggist's licenses?—Because people can procure opium from the licensed shops.

19557. Do they get it more cheaply from the licensed shops than druggists?—Yes, I think so. I know from my own experience that they do, for I have had occasions to get prescriptions containing opium made by chemists, and they charged me several rupees for a prescription which did not contain a pice worth of opium.

19558. Does it not strike you as a little singular that from whatever cause, so few of the chemists should desire to have this license; and does it not rather suggest that they dispense with the license, and must necessarily use opium in some form or other?—I think European chemists do. They sell tinctures made up with opium—medicinal preparations of opium.

19559. What impression did you desire that part of your evidence relating to druggist's licenses to produce on our minds?—I introduced it really in order to lay before the Commission any information I had which might in any way help them in their enquiries. If you ask me my own conclusion to be drawn from that, I should say it has been found unnecessary to grant special licenses, because native druggists do not ask for them as opium is better supplied through the ordinary licensed shops. A druggist's license pays no revenue. For a Magistrate to grant indiscriminately free licenses to druggists would be to relieve the people who consume opium of the charge which they now pay in the shape of license-fees.

19560. Do you think that the fact that only one such has been issued points to the fact that they are not desired, or that the Magistrates restrict the issue?—I should say that pointed to the fact that they are not required.

19561. It is your opinion that the cultivation of opium is more profitable to the people than that of most other crops?—Yes.

19562. You say in the table on page 17 of the memorandum you have put in that in the year 1890-91 the amount under cultivation was 196,000 bighas; in 1891-92, 176,000 bighas; and in 1892-93, 158,000 bighas, *i.e.*, a reduction of 19·6 per cent. in those years?—A reduction certainly—I have not calculated the percentage.

19563. I make it 19·6 per cent: do you think that that reduction has taken place because the people did not desire to cultivate poppy, or because they were not permitted to have a license?—Chiefly because they did not desire. To some extent no doubt because licenses were withheld, but chiefly, I have no doubt whatever, because people had ceased to cultivate and did not wish to continue.

19564. Must not something serious have taken place that a reduction amounting to a fifth of the area in 1890-91 has taken place?—In my opinion it was due to bad seasons rendering it less profitable—not unprofitable, but less profitable?

19565. Do you think that any further restriction ought to be imposed upon the use of opium?—You observe I have drawn a distinction between opium-smoking and opium-eating.

19566. Do you think that any further restriction should be imposed upon opium-smoking?—I have always been in favor of placing every possible restriction upon opium-smoking. I think we might go one step further than we have yet gone. It is not the opinion of most officers I admit, but I would be prepared myself to advocate a measure which would make it punishable for any person to keep a public opium-smoking saloon. I am not prepared to say for a moment that we can go to the length of making opium-smoking *per se* a penal offence, but I think we might fairly forbid the trade of keeping open saloons for the congregation of opium-smokers and the supply of facilities to them. I think the measure would be attended with very much risk; but I would be prepared myself, recognising fully the risk, to advocate it.

19567. Is it the case here in these provinces, as we have been informed is the case in some places, that what have been called dens by some persons and clubs by other persons have been established for the purpose of smoking within a short distance of the licensed shop?—There are no longer licensed *chandu* shops in these provinces.

19568. Are these smoking saloons established within a certain distance of the licensed opium shop, and is there not reason to suppose that this is really a colorable evasion of the prohibition which has been imposed?—There are a large number in the towns of these provinces of so-called clubs or saloons where people meet for the purpose of smoking opium, but I have no reason to believe that the proximity of them to opium shops could affect the matter one way or another. Opium, as sold, cannot be smoked, it

must be prepared; and it makes no difference to a man who keeps one of these places whether he has to walk half a mile to buy the necessary amount of opium or whether he can get it next door.

19569. Is there any reason to believe that these clubs or dens are practically owned or managed by the licensed vendors of opium?—None whatever now. On the contrary, they are opposed to the interest of the licensed vendors because they generally use illicit opium.

19570. (Mr. Mowbray.) You have suggested that you would like to see further restriction with regard to these opium saloons: I do not know whether, as a practical man, you have ever tried to draft a regulation which would deal with them, or whether you could suggest any definite plan by which they could be dealt with?—That is the only suggestion I can make. I think it could be put in words, that it should be punishable to keep a public place for the assemblage of opium-smokers and the supply of appliances to them for the profit of the person keeping it. It would be an extremely difficult and delicate regulation to work, and attended with much difficulty and many risks; but having strong opinions myself on the subject of opium-smoking, I would be prepared to take those risks, and I would be encouraged in that because I think we should have the support of all respectable, native opinion in these provinces.

19571. I believe you have tried to prosecute in certain cases?—A large number.

19572. It might be interesting if you would mention your experience with regard to prosecutions to the Commission?—Since the prohibition of the consumption on the premises, that is in the year 1892-93, we have had in these provinces 78 cases for illicit possession or sale of preparations of opium for smoking. Of these, 8 resulted in acquittals and 70 in convictions. During the current year, when both sale and manufacture as well as consumption are unlicensed, we have had in three months 15 prosecutions and 4 acquittals. I have ascertained that it has become much more difficult to obtain convictions than it used to be, and that the number of cases that were brought to trial only represent a very small part of the number of cases which are known to occur, but which the police are unable to send for trial owing to the extreme difficulty of obtaining judicial proof which would satisfy the Courts.

19573. Some reference has been made before this Commission to a circular which was issued in these provinces; are you of opinion that you have done your best since these licensed shops have been closed to bring to justice those who have been offending against the law?—No effort has been spared. The most stringent orders have been issued, and I believe conscientiously and rigorously worked; but I receive constant reports showing the extreme difficulty of bringing such cases to proof which will satisfy Courts. Most severe sentences have been and continue to be passed—a year or two years' rigorous imprisonment—but it has no deterrent effect. I had a case brought before me of a man immediately on being released from prison again starting places of the sort.

19574. Passing from that subject, a witness the other day said something about the retail price of opium in shops being fixed by Government: is there any foundation for that statement? Is not the price at which the opium is retailed in the shops by the licensed vendors a matter in their own discretion?—As far as refers to the shops of licensed vendors it is, but opium is also retailed at tahsil head-quarters.

19575. At the treasuries of the districts?—At the tahsil treasuries.

19576. Would you explain that?—At the sub-treasuries.

19577. How many sub-treasuries then are there in a district?—Four to five perhaps in a small district. Perhaps some districts will run to as many as six or seven.

19578. At what price is opium retailed at these treasuries?—The fixed price for that district. I have explained that the price varies from district to district.

19579. If a person can get opium cheaper at the treasury, why does he go to an opium shop?—I have been always wanting to know that myself. I am afraid I cannot give you an explanation that would entirely satisfy you. One reason is that treasury sales cannot take place on holidays, or except during office hours. I think to some extent it is a matter of convenience. The treasury is at a distance from their houses, and it is not worth while for a man who wishes to buy a pice worth of opium to walk a mile or two to the sub-treasury to buy it. The man who can afford to lay in a good stock, who will buy 1 or 2 tolas, he will go to the treasury and purchase there.

Mr. T.
Stoker.

26 Jan. 1894.

Mr. T. Stoker. 19580. Do you think that that system of selling by Government officials works satisfactorily?—I think it does, and that is the opinion of all the best authorities in the province. The question was raised and discussed not very long ago.

26 Jan. 1894.

19581. Would it be possible to extend that system?—I cannot say it would be impossible. It would be difficult. Neither can I say it would be desirable, because we should forfeit the license-fees (which form a very substantial part of our revenue) by doing it.

19582. On the other hand, it has been suggested that the existence of these license-fees, and the inducement to make a profit out of the sale of opium, tend to make the license-holders force the sale of opium; and therefore it has been suggested that if it were entrusted to Government officials or others who had no direct personal interest in making a profit, there would be less inducement to stimulate the consumption: do you think there would be risks attached to the extension of the system of sale by Government officials?—There undoubtedly would be risks. If Government officials had a monopoly of the sale of opium they would abuse that monopoly. The Government would lose its revenue.

19583. I quite understand that there would be a loss of revenue, but what other risks would you anticipate?—Government officials—the class of officials whom such business could be entrusted to—would overcharge for the opium they sold. They do so at present, but they are kept in check by the presence of licensed vendors.

19584. You would not be disposed to recommend a further extension of the system?—No, certainly not.

19585. (Mr. Haridas Veharidas.) Would it not be more convenient for people who want only a pice or two worth of opium to go to the treasury instead of the opium vendor?—They do as a matter of fact go also to the treasury.

19586. Does the treasury sell opium one pice worth?—Yes; there is no limit on the amount that can be bought at treasury.

19587. Have you seen one pice worth of opium sold at the treasury?—Yes, but not frequently. The sales are of larger quantities than in the licensed shops.

19588. Would an opium vendor take a license when there is a treasury which sells even a pice worth at a cheaper rate?—Yes; they do take licenses under such conditions. I have known a case myself in which a licensed vendor at one shop was retailing opium at the rate of Rs. 40 per seer and the licensed vendor in another shop, at a distance of eight miles, was retailing it at the rate of Rs. 20.

19589. (Mr. Fanshawe.) You have expressed strong opinions against *chandū*-smoking, and I understand that you personally recommended the closing of the *chandū* shops and smoking on the premises before the Local Government adopted that view?—I was not Commissioner of Excise at the time the orders of the Government of India were issued for that purpose but years ago, when in the position of a District Excise Officer, I advocated such a measure.

19590. A previous witness read a confidential circular issued by you in your official capacity as Commissioner of Excise, No. 1 of 1892, dated 26th July: I think it right to ask you to make any remarks or explanation you would like about the issue of that circular?—When the orders, dated 25th September 1891, of the Government of India were received, those orders stated the risks which it was recognised would attend such a measure, and it was left to Local Governments to adopt the preventive measures best calculated to minimise those risks. None of us, even those who were most strongly in favour of a total closure, ever imagined or hoped that people who had acquired the habit of smoking opium would abandon it in deference to any orders of Government. The fear of all was that as long as these people continued to practice the habit, to prevent them meeting together in special places where they could find the necessary appliances for smoking would be to drive the vice inward, and to introduce it into the domestic circle, which I believe has hitherto been free from that contagion. We recognised that certainly, as long as the public sale and manufacture of *chandū* existed, people who were addicted to the habit would continue to smoke, and if they were prevented from smoking in special places outside their houses, that they would necessarily commence smoking at home, and that the members of their families, the females and younger members, would be exposed to the risk of learning this habit. The law as it then stood, and as it now stands, gave us no power to prevent opium-smoking or to prevent the maintenance of public places where opium-smoking could be carried on and the necessary appliances, exclusive of the opium itself, supplied on pay-

ment. For these reasons, acting in the interests of repression, it was thought that the best way to carry out the instructions of the Government of India, and to minimise the most serious risk which attended the introduction of this new measure, was to proceed gradually, and not at once, to attempt to do what we had no power to do. The Magistrate has no power to prevent the congregation of opium-smokers in public places, but he is able to keep those places under control and supervision and be ready to prosecute whenever he can obtain proof of any infraction of the law. It was with that view that the policy as expressed in that circular was adopted. There was this danger in making a public exposition of the existing state of the law and rules on the subject, that it would give unnecessary publicity to the conditions with which people could with the greatest impunity carry on the public practice of opium-smoking. Up to this it had been a strict Government monopoly, and the people who, speaking generally, were not very well acquainted with the law and rules on the subject, imagined that opening or maintaining any public place for the sale of *chandū* would probably be followed by punishment. It was not considered advisable to do anything which would tend to immediately and unnecessarily dispel that idea. For that reason that portion of the circular which included a statement of the law on the subject and instructions as to the policy it was thought best to follow was made confidential, and addressed duly to the Magistrates and Collectors of districts, with the view of putting off as far as possible, the evils which must undoubtedly have sooner or later followed from the prohibition of consumption of opium preparations on licensed premises.

19591. There was no intention, after the smoking in licensed places had been prohibited, of allowing it still to go on, and of thereby minimising the effect of Government orders?—On the contrary, our effort was to try and give the greatest possible effect to those orders, and to minimise the risks which the Government of India very fully recognised must follow from this measure which it itself introduced.

19592. Is there anything else you would like to add on that point?—I would like to add that this intention of the authorities to minimise and restrict these evils, which we all saw and feared, was frustrated by the undesirable publicity which was given to the contents of that confidential circular. It was circulated throughout the country, and undoubtedly that publication of its contents has resulted in making the parties concerned acquainted with the best way in which they can with impunity continue to assist the practice of opium-smoking. That violation of confidence has distinctly furthered the cause of intemperance.

19593. (Sir James Lyall.) It is, I think, an admitted fact that with reference to the novelty of the habit, its practice in public saloons, and the bad company which it induces, respectable people in most parts of India are strongly against the practice of opium-smoking?—That is the case for these provinces.

19594. Apart from that, have you yourself formed any positive opinion to the effect that opium-smoking is more deleterious than opium-eating?—I think myself it is. I have formed that opinion from observing opium-smokers and their surroundings. I am extremely unwilling to dogmatise on the subject, but that is the opinion I have formed.

19595. I myself have been into opium-smoking saloons, and in 1883 I proposed to the Punjab Government that they should be shut up, but I found it extremely difficult to come to any opinion upon the effect of opium-smoking—I mean to say, the people one saw there were generally a set of people whom one knew were generally the debauched part of the population?—That is quite true of these provinces also. I do not attribute by any means the whole of the bad condition that I have noticed in opium-smokers to the practice of opium-smoking; but still making an allowance for that, and looking as generally as I can at the question, I still think it is a bad habit.

19596. That is, you still think, even if it were followed by a man in his private room without any bad surroundings at all, and in moderation, it would be likely to be more deleterious than opium-eating.—I think so. That too, I think, is the opinion of the native community.

19597. The native community is very apt, is it not, to be prejudiced against anything that is a novelty?—Yes, that is true.

19598. Can you tell me what profit the treasurer, who sells opium, gets?—One rupee a seer commission. It is not merely profit; it also covers wastage and dryage. There is certain amount of loss in retailing opium in small quantities.

19599. Does every tahsil and sub-treasury have the privilege?—Every sub-treasury. It is not retained at the *sadar*, the chief treasury. There is, of course, a sub-treasury at every head-quarters.

19600. I think you said that you imagined even at present they do sell at higher prices than they are supposed to sell it?—Sometimes, undoubtedly. Not in quantities that are weighed. In quantities that are bought by weight the customer looks after himself. But perhaps the bulk of opium is sold in made-up pills, which are not weighed out to each consumer as he buys them, and in those cases I think it very frequently happens that the proportion of opium is not as large as it ought to be according to the fixed standard of price.

19601. I suppose a shopkeeper who does nothing else but sell opium is more likely to be a civil, quick, ready salesman than a treasurer who is a Government official and has other work to do?—Yes, and people do not care, I think, to go about the tahsil always.

19602. In replying to Mr. Mowbray on questions put to you regarding the proposal to use official agency to sell opium, I do not think you referred to the fact that non-official licensed vendors are much interested as monopolists in actively preventing smuggling, and that they also find it difficult to smuggle themselves while they are interfering with other people's smuggling?—Quite so; a most valuable consideration.

19603. Is it not also a fact that to induce licensed vendors not to smuggle themselves and to continue to prevent others from smuggling, the policy has been to put the issue price of opium to licensed vendors not very high, and to trust to getting a large part of the excise revenue on sales by auctioning the licenses?—Our tendency now is to get as large an amount of the revenue as we can reasonably do from the fixed duty, and to leave as little as we can to be fought for in the doubtful contest on the auction-sale.

19604. But that involves a certain danger, does it not; if you put the issue price very high then the licensed vendor may find that it may be to his interest to smuggle?—Undoubtedly.

19605. And to let smuggling run riot as it were?—Yes; that consideration was kept in mind in fixing the present price of opium.

19606. Mr. Wilson drew attention to the great fall in area of cultivation in 1891-92 and in 1892-93 as compared with 1890-91, which you have referred to in your memorandum: the year 1890-91 was an exceptionally large area?—It was an exceptionally large area. I think the second largest on record.

19607. The two preceding years were, I think, considerably smaller years than the two following?—Yes; these fluctuations take place generally in that class of cultivation which is least profitable. The class of cultivators who most readily abandon cultivation in a bad year are those who most use hired labour, or in those places where the condition of soil or holdings are less favourable to the cultivation of poppy.

19608. (*Mr. Pease.*) Is it the practice to put up in the tahsil treasuries the price at which opium is sold?—No; not to my knowledge.

19609. That could easily be done?—Very easily. Everyone knows it already.

19610. In case of persons selling small quantities which profess to be a certain weight, could they not be dealt with in the same way as any person using fraudulent weights?—If you could prove it, but it would be extremely difficult.

19611. Would it not be very easy for you to send somebody to buy a piece worth of opium, and receive that piece worth of opium at the door, and have it weighed immediately?—Yes, such a test has often been attempted. The sub-treasurer would immediately reply that the emissary was an enemy and had reduced the amount of the opium before he reached me. It is extremely difficult to prove these cases.

19612. Do you think that you would have any difficulty in satisfying yourself as to the honesty of the sub-treasurer?—I might have a great deal of difficulty in satisfying the Magistrate.

19613. Of course these are difficulties which would no doubt arise in the administration?—In theory it would be quite easy, but in practice it would be very difficult.

19614. (*Mr. Wilson.*) In referring to the consumption of opium in these provinces, you say, "I believe this is not one-fourth the incidence of the opium imported into the United Kingdom every year:" are you aware that a very large proportion of that opium is re-exported in the form of opium?—I think that is quite probable.

19615. I have no recent figures, but I have here a copy of a return issued by the Board of Trade in September 1882. I have merely taken out the last four years that occur there, and if I am right in my calculation more than 60 per cent. was re-exported: you have no reason to doubt that?—No.

19616. Is it not also the case that there is a very large manufacture and export of laudanum and other products of opium from England?—Presumably, those would be included in the exports.

19617. No, this is the export of crude opium; we are not at all to understand that in your opinion it is four times as much?—No, not four times. But I think if I had the opportunity of getting access to these returns I could probably show that there was not that disproportion which might be imagined in the North-Western Provinces and in England. I think it could be shown that man for man the consumption of opium per head in England is greater than the consumption of opium per head in the North-Western Provinces.

19618. You believe so?—I would be prepared to find that result.

19619. With reference to the circular Mr. Fanshawe asked you about, did I understand you to say that you, or at least the authorities, were apprehensive that smoking would be driven into the home and the family?—Yes.

19620. That seems hardly consistent, without some explanation, with this expression in the circular in question, "The known conditions of *chandu*-smoking render the maintenance of some common place for the consumption of the drug an almost absolute necessity"?—They would meet in a private house; that is to say, three or four men instead of going to the house of a man, who maintained the premises for their accommodation, would meet at the house of one of their number.

19621. That is what we are to take it as meaning at the time?—Quite so. Besides this circular does not contain a complete exposition of the reasons which led up to its issue.

19622. Did I correctly understand you that at the time that circular was issued it was the wish of the authorities that the prohibition should be, as far as possible, carried out?—Yes, prohibition of smoking places.

19623. Is there any indication of that in the circular?—No, this circular conveys specific instructions on particular points. It was addressed to officers who already understood the policy and wishes of Government. It does not therefore undertake to expound the policy or the reasons that led up to that order.

19624. You are no doubt aware that it was very generally taken to mean that the authorities of the North-Western Provinces and Oudh did not agree with the order of the Government of India?—I did not know that.

19625. I think that was the general impression?—That was the statement made by certain persons, but my position is that that was entirely wrong; that that was an entire misconstruction of the intentions of the authorities.

19626. It was distinctly stated that any person opening a saloon can supply the pipes and lamps and service?—That is the law.

19627. And it went on to say that no effort should be made to suppress it. Would you say that the phraseology of the circular conveyed the idea that the Government of the North-Western Provinces would very much regret if such a state of things should ensue?—That construction was put upon it, but it is a misconstruction.

19628. In your opinion now, looking back, do you think the language of the circular was not open to misconstruction?—Undoubtedly it has been misconstrued, and therefore I cannot say it was not open to misconstruction. But it was not and would not be misconstrued by the persons to whom alone it was addressed. It was directed in confidential form to a limited number of very responsible officials. It has been misconstrued only by others to whom it was improperly communicated.

*Mr. T
Stoker.*

26 Jan. 1894.

Captain
P. C.
Chapman.

CAPTAIN F. C. CHAPMAN called in and examined.

19629. (Chairman.) I believe you are a landholder of the Partabgarh District in Oudh, and an Honorary Magistrate—Yes.

19630. And Justice of the Peace?—Yes.

19631. How long have you been a resident in India?—On the 22nd of March I have been here for 50 years.

19632. For how long a period have you been the owner of large estates?—Since the Mutiny. I was allowed to leave the service, and Government gave me the pick of the forfeited estates in the North-Western Provinces.

19633. Is opium cultivated on your estates?—Yes, very largely.

19634. As a Magistrate of 30 years' standing, what opinion have you formed as to the effect of the use of opium upon the people in this country?—I have known no ill effect at all. I have never heard of the ill effects of opium except in the debates in the House of Commons.

19635. Do you consider that the cultivation of opium under the system now adopted by the Government is of advantage to the cultivators?—Certainly. I am supposed to know something about agriculture. The opium crop is one of the rotation of crops. There are three crops that are sown,—*juar*, *bajra* and Indian-corn. These crops in this part of India are generally cut at a time when it is rather too late to sow wheat and barley or towards the end of October. Those crops ought to be sown in the beginning of October. Opium then comes in. The land is prepared carefully during November and opium seed sown in end of November or beginning of December. This crop matures in the beginning of February. The land is again prepared and irrigated, then indigo sown and cut in August and September. Then comes wheat and barley. The opium crop, therefore, enables the ryots to have five crops in two years. In the month of August the Government gives the advances. The ryots receive no return for their crops until October. Therefore, with the Government advance they are able to go on living from hand to mouth, as most cultivators do, and they have money to buy seed. For these reasons I consider that opium cultivation is an advantage to the cultivator.

19636. In looking over a space of two years, you must look not only to what is produced from the cultivation of the poppy, but what is produced by other crops which in succession can be produced from that same land in that given time?—Yes, in place of poppy there is the crop *chana*. There are different names for it in different parts. Here it is called *sowa*. This *sowa* can sometimes be sown, but opium is more profitable. The average production of a *bigha*, which is two-thirds of an acre about here, is from six to ten seers. If you take the average as 8 seers, and the Government price as 5 or 6 rupees, you have Rs. 40 from opium, the poppy seed, say, 2½ maunds, at Rs. 4, gives Rs. 10 more.

19637. Has it come to your knowledge that undue pressure is necessary or has been exercised to induce the ryots to grow the quantity of poppy which the Government desire to obtain?—My opinion is that undue pressure has not been used. In the neighbourhood of large towns there is a difficulty about sowing poppy. In the districts of Allahabad, Ghazipur, Buxar, Patna and Bankipore potatoes, which are sown about that time near the towns, yield a very large profit. Patna and Bankipore are the head-quarters of the potato cultivation. The large potatoes go down to Calcutta and the small ones are left for seed. They are sold at 5 rupees a maund. They give a very large return, and of course it is not profitable there to sow opium. At a distance, therefore, from towns, I do not know anything that is of more profit than opium, if the men choose to take the Government advances and cultivate it. I myself have read what Sir Charles Crosthwaite said. I think he said it was almost impossible to make a native grow what he did not wish to grow. I myself have about 300 square miles covered by my works, and I speak with some authority. In 1872 I determined to introduce the cultivation of indigo which I knew would be profitable. At that time the Land Act in Oudh enabled me to turn anybody out, however large the man's cultivation and however much he

paid, by simply spending 6 annas. In spite of that power I only got the men out of all this extensive country in the first year to grow 1,100 maunds of indigo. In the second year they grew 6,500; in the third year 26,000; in the fourth year 65,000; and now we grow about, yearly, 200,000 maunds. It was to their advantage to do it, but you could not drive them. I had the greatest difficulty in getting them to do it. During the Mutiny there was what was called "passive resistance." The people in this country will not stand up and tell you that they will not do a thing. They will say—"You are master;" and they will go home determined not to do it. That is our difficulty. It is a difficulty throughout the country. You cannot force a body of natives in this country to grow a crop which they do not think will be to their advantage to grow.

19638. Has anything come to your knowledge which would lead you to suppose that the minor officials in the Opium Branch of the service are guilty of corrupt practices?—I don't suppose there is any native minor official who is not now and then rather corrupt. I suppose there is less corruption in India than there is in England. I was Government agent for some years. I tried to place Government work in England, I found great difficulty. You have to fee the middlemen, and here you have to do the same thing.

19639. (Mr. Wilson.) Is the cultivation of the poppy in the district you have referred to carried on under the regulations of the Benares Agency?—It is carried on under the Ghazipur Agency: I suppose that is the Benares Agency.

19640. Were you correct just now in saying that the advances were made in August?—I am not quite sure, I am a large landholder, but I have never grown poppy.

19641. (Mr. Fanshawe.) I believe that you have identified yourself largely with the interests of the people of the country, and are thoroughly conversant with their habits and ways?—I owe everything to the people of this country. I was a poor man when I came here, and now I have more than enough to buy bread and cheese. I shall be happy to do anything I can for them.

19642. I believe that you were specially asked to attend an Agricultural Conference in 1881-82 as an adviser, on account of your knowledge of agriculture in the North-Western Provinces is that so?—I was practically on the Viceroy's Council in 1881-82 when he was making Land Laws in the North-Western Provinces and Oudh. He wanted some one to tell him exactly how things stood instead of having a native say "God is above and you are below." I was sent for. It was a great honour, and I did my best. I should like to say that I have had a great deal to do with Sikh soldiers sent down by Lord Lawrence to free the Punjab of bad characters, just after Delhi fell. I had a very large number of men through my hands, and almost all of them ate opium. On one occasion in pursuit of Feroze Shah we marched 159 miles in 56 hours, and not a man fell out. I never heard of opium doing any harm to the men; and, in my humble opinion as a non-official, if you interfere at all with this Government monopoly, you will inflict a great calamity upon this country. The revenue from opium has no effect upon the people, but if you do away with it, you will have to tax the people to the extent of five or six millions. That would be felt very much; now no one feels this. If you do away with the Government monopoly, in all probability the result will be that each person who now cultivates opium would cultivate a small patch, and there would be a possibility of the people of this country taking to opium in the same way as the Chinese. There is a possibility of it. At present the Government arrangements are so correct and so well carried out that in 30 years I have only had one case of a cultivator being brought before me for keeping back a portion of his crop. I consider the Government arrangements perfect.

19643. (Maharaja of Darbhanga.) Did you say you were practically on the Council when the Land Laws of Oudh and North-Western Provinces were made?—I had to do with the North-Western Provinces and Oudh. I was not on the Council. When I went home to England another man was appointed from Bettia. There is a memorandum by Government in which it is said that I was an *amicus curiæ*.

The witness withdrew.

Mr. H.
Finch.

MR. H. FINCH called in and examined.

19644. (Chairman.) I believe you are a landholder of Meona, Shahjahanpur, Honorary Magistrate, and a member of the District Board?—Yes.

19645. How long have you resided in the North-Western Provinces?—For the last 28 years.

19646. What has your residence here taught you with reference to the use of opium by the people?—I have never met a case in which it did any harm at all.

19647. How is the opium habit regarded in the opinion of the people generally?—It is considered generally to be a kind of tonic and of great use in certain seasons of the year.

19648. What is your view as to the results which may follow the abolition of the Government monopoly?—I think very great discontent would be caused, and there would be a great deal of loss to the cultivator and zemindar.

19649. If the cultivation of the poppy were prohibited, how do you think the results would be felt by the agricultural population?—I do not think it would be possible to stop the cultivation of poppy. If it were prohibited, probably the consumption would be greater, because everybody would cultivate it themselves. The establishment required to prevent cultivation would be enormous.

19650. You think it would lead to smuggling?—Yes. If it were prohibited in this country, it would be imported from Nepal and other places. The establishment to stop the cultivation would have to be very large, and it would be an enormous expense.

19651. Is there any other point you would like to put before us?—Opium is the most valuable crop which is grown, and it is grown by a particular class of people—the poorest class.

19652. And would you consider it to be beneficial?—It is very beneficial in that way.

19653. (*Mr. Wilson.*) Is poppy grown on the estates or land you are interested in?—Yes.

19654. To a large extent?—Not to a very large extent. It is grown to a small extent; there are some four or five villages in which it is grown.

19655. Supposing there was prohibition, would you feel obliged to reduce the rents?—To a certain extent. Where opium is grown the highest rent is paid. It is grown by the poorest classes of people in the village, who almost exist on the produce of the opium.

19656. Did you hear Mr. Stoker's evidence?—Yes.

19657. Did you hear his reference to the large reduction of cultivation in certain years?—Yes.

19658. Do you imagine that that led to any reduction of rents?—No, because it spread over such a very large tract of country that only a small reduction like that would scarcely be felt.

19659. With regard to the individual ryot it would be just the same whether he was alone or in company with many others, would it not?—It does not affect my part of the district.

19660. Have you ever heard of a case in which rents were reduced on account of opium cultivation being abandoned?

The witness withdrew.

SAYAD ALI HASAN called in and examined.

19673. (*Chairman.*) I believe you are a Deputy Collector and Revenue Member of the Council of Regency of the Rampur State?—Yes.

19674. Before taking up your appointment at Rampur, were you in the service of the British Government?—Yes.

19675. Will you state to us the result of your observations as to the consumption of opium in those parts of the country with which you are acquainted?—The consumption of opium is not so great in the North-West Provinces as in Behar, Central India or Rajputana. The use is not directly prohibited either among Hindus or Mahomedans, and is indulged in by both classes, perhaps in a greater degree by Mahomedans. It does not cause physical deterioration if taken in small quantity, but the giving up of the opium-eating habit is very difficult, and sometimes tells upon the constitution terribly. Opium-smoking or *chandu* is very pernicious and should be stopped altogether. The eating of opium stimulates people to activity, but this effect does not last long. If opium be taken in small quantity, and sweets, milk or *ghi* taken after it, it is nourishing and prevents certain diseases, notably catarrh and cough. It is the excessive use of opium, as of any other narcotic, which is to be condemned. In order to prevent it the State monopoly should be maintained strictly and the duty raised.

19676. Have you anything to say to us with regard to the value of opium as a febrifuge?—Opium serves as a febrifuge in malarious tracts, and is generally useful in catarrh, cough, diarrhoea and eye diseases.

done?—No. I do not know where opium cultivation has been abandoned.

19661. (*Mr. Mowbray.*) You said there were four or five villages in which opium was cultivated. Out of how many villages altogether would that be?—I have 26 villages.

19662. (*Mr. Haridas Voharidas.*) What would be the area of poppy cultivation in those four or five villages?—The area would be about 100 acres.

19663. What is the area of the whole estate?—About 8,000 acres.

19664. (*Mr. Fanshawe.*) Mr. Stoker told us that if poppy cultivation were prohibited, it would be disadvantageous to particular villages in districts and to particular classes of cultivators. Do you agree with that?—Yes. In one village that I have the whole cultivation is about 500 acres; out of that 45 acres are cultivated with opium. The whole rent of that village is Rs. 2,100. The value of the opium crop alone is over Rs. 4,000.

19665. (*Sir James Lyall.*) I think Mr. Stoker said that the fluctuations from year to year in poppy cultivation are among that class of cultivators who make least out of opium and who cultivate it on the worst kind of land, and that the cultivation with a particular class of men having small holdings does not fluctuate?—That is so. Their cultivation is very steady.

19666. But the cultivation of the Brahmins or Rajputs who cultivate opium on land which is not very suitable for opium would fluctuate?—Yes. If the Opium Department wants to make any difference in the cultivation it always pitches on those villages where the return is less; thus the villages that give good returns are always kept on about the same. Opium is cultivated particularly by men who have not a plough or bullock at all, so that if you do away with the opium it would fall upon the poorest classes of the country.

19667. The smallest holdings?—Yes.

19668. By not having a plough do you mean people who have to borrow their ploughs, or what?—I mean that they are people who as a rule cultivate vegetables and small things in certain seasons of the year, and who during the rest of the year work as labourers. Numbers of cultivators of opium have not a plough or a bullock.

19669. How do they work up the land? With a spade?—They dig it up with a *phaura*.

19670. You are sure of that?—Yes.

19671. Do you know whether that prevails to a large extent elsewhere?—It does in my district of Shahjahanpur and Bareilly.

19672. I suppose it is only a percentage of the people who are in that position?—Opium is sown in small plots. The man, his wife, and his children all work at it. Opium is very seldom cultivated near me with hired labour.

The witness withdrew.

Mr. H. Finch.

26 Jan. 1894.

Sayad Ali Hasan.

19677. How is the cultivation of opium dealt with in the State of Rampur?—The cultivation of poppy is forbidden in the Rampur State. The State gets its supply of opium from Moradabad at a low rate, *viz.*, Rs. 8 a seer, and sells it to the license-holders at Rs. 17 per seer. The growing of poppy in this territory is forbidden here simply to prevent complaints of smuggling in the neighbouring British districts.

19678. Have you any further remarks to make on behalf of Rampur?—In the Rampur territory, particularly towards Suar and Bilaspur sub-divisions, it is a general belief that moderate use of opium guards the consumer from malarious fever and diarrhoea, and that it overcomes the trouble that arises from drinking foul and unwholesome drinking water. The present inquiry is causing uneasiness to the general public. Its prohibition will be in a great measure impolitic and unpopular. As far as Rampur State is concerned, it can hardly afford to lose the revenue from opium, which is about Rs. 20,500 per annum.

19679. (*Mr. Fanshawe.*) If the use of opium were prohibited, except for medical purposes, do you think that that would cause discontent?—Yes, I think so.

19680. (*Mr. Mowbray.*) Is the growing of opium in the Rampur State forbidden under arrangements with the British Government?—It is to prevent smuggling that poppy is not grown in Rampur.

19681. By agreement with the British Government?—Yes.

Sayad Ali Hasan. 19682. If the British Government prohibited the growth of poppy in British India and did not supply the State of Rampur with opium as agreed, would that State be at liberty to grow opium itself?—Formerly, Rampur was permitted to import opium from the Rajputana side. That caused many difficulties. There were some cases, and Government offered to supply them with whatever opium they wanted at an easy rate; so they do not grow opium in Rampur.

26 Jan 1894.

19683. If they did not get opium from the British Government, would they grow it for themselves?—I think they would.

19684. (*Mr. Wilson.*) By whom are the members of the Council of Regency of the Rampur State appointed?—They are nominated by the Local Government, the Government of the North-Western Provinces, with the sanction of the Government of India.

19685. All the members of the Council?—Yes, all of them.

19686. Is your opinion about opium-smoking generally held by the authorities of the Rampur State?—I have not consulted them, but I think they are of the same opinion as I am.

19687. Have you taken any steps to endeavour to stop opium-smoking?—No, not yet.

19688. You think that it should be stopped?—Yes, I think so.

19689. Have any steps been taken to that end?—None yet.

19690. Has that subject been considered by the Council of Regency?—No; it has not been before them yet.

19691. (*Mr. Pease.*) You state that the revenue from opium is Rs. 20,500 per annum: is that made up from the license duties and the difference between the Rs. 8 a seer at which opium is purchased and the Rs. 17 a seer at which it is sold?—Yes, from both sources.

19692. (*Maharaja of Darbhanga.*) When you say that opium is not prohibited by the Hindu and Mahomedan religion, do you mean that all Mahomedans are allowed to use opium, looking at it from a religious point of view?—There is no very direct prohibition by the Mahomedan religion. Of course it is said in the Mahomedan law that anything which makes a man intoxicated is objectionable and is not to be taken. With regard to opium I do not see any particular mention about it.

19693. You say that mention is made about anything which intoxicates?—Yes. It is said in the Koran: "Do not approach prayers when you are intoxicated." That implies that it may be forbidden. There is no direct thing, but it may be forbidden indirectly.

19694. In the *Hadis* is not there this passage "Kullo mussakkarim khamran, kullo mussakkarim haraman." "All intoxicants are liquor (*khamran*); all intoxicants

are therefore forbidden (*haram*)": is this a correct translation of Arabic?—Yes.

19695. Mr. Sale in his previous translations of the Koran also says in one of the paragraphs: "Opium and *dhung* (which latter is the leaves of hemp in pills or conserve) are also by the rigid Mahomedans esteemed unlawful, though not mentioned in the Koran, because they intoxicate and disturb the understanding as wine does, and in the more extraordinary manner": do you agree with that?—Yes.

19696. (*Mr. Fanshawe.*) May I assume that you are yourself a rigid Mahomedan?—Yes.

19697. (*Sir James Lyall.*) Do you consider that a man can be said to be intoxicated who takes a moderate dose of opium?—By "intoxication" I understand when a man is not in his proper senses and not able to judge between good and wrong. Of course we consider a man intoxicated at that time. But when a man takes opium in a moderate dose, and is quite sensible and in good humour, he cannot be said to be intoxicated.

19698. (*Maharaja of Darbhanga.*) I suppose you mean by that a small quantity of wine is not forbidden, provided it only exhilarates, because the translation is, "all intoxicants are liquors"—the word is "*Khamran*"?—Yes.

19699. (*Mr. Mowbray.*) Have you ever taken opium yourself?—No.

19700. I suppose you have known many Mahomedans who have done so?—Yes.

19701. And they are not considered to have done anything contrary to their religion in doing so?—No, certainly not.

19702. (*Mr. Haridas Veharidas.*) Is alcohol expressly prohibited in the religion?—Yes, I think so.

19703. In the same way is opium expressly prohibited?—I am doubtful about whether the prohibition is equal.

19704. You are not so positive about opium as you are about alcohol?—No.

19705. If what is said in the interpretation is right, in a secondary sense opium might be considered so?—Probably.

19706. In whatever quantity alcohol is taken it is wrong?—Yes.

19707. And in that sense opium is not?—No.

19708. (*Mr. Fanshawe.*) Is *chandu*-smoking at all common in Rampur State, so far as you are aware?—Yes. I think about 10 per cent. of the city population smoke *chandu*.

19709. The Rampur State is about 900 square miles, is it not?—Between 900 and 1,000 square miles.

19710. Can you tell us what the population is?—Over half a million.

19711. The population is fairly divided between Hindus and Mahomedans, is it not?—Yes.

19712. So that there is a large proportion of Mahomedans in that city?—In the city itself they have more Hindus than Mahomedans.

The witness withdrew.

RAJA RAM PRATAP SINGH, of Mainpuri, called in and examined (through an interpreter).

Raja Ram Pratap Singh.

19713. (*Sir James Lyall.*) I believe you are a Rajput and land owner?—Yes.

19714. In what district do your lands lie?—In Mainpuri, in the Agra Division.

19715. How many villages have you?—About a hundred.

19716. How many generations of your family have held this estate?—Thirty-six generations.

19717. To what tribe of Rajputs do you belong?—The Chauhan.

19718. Are there many Rajputs of that class in Mainpuri?—Yes.

19719. Kindly give us your experience about the use of opium?—Opium is used mainly for non-medical purposes, and to a smaller extent for medical purposes, more or less among all races of India. The prohibition of the use of opium, besides being hard on the rich, will deprive the poor of the means of treating themselves in cases of disease. The lives of hundreds of children will be endangered, and there will be little hope of old persons maintaining their health without the use of opium.

19720. Supposing opium were prohibited and the revenue suffered, would the people be willing to bear taxation to make up the loss of revenue?—No. The people of India are not capable of bearing the cost of compensation for the loss occasioned by the loss of opium revenue. Opium is produced on large tracts of land, and the tenants are enabled by the income obtained from its growth to pay their rents

to the zemindars, the income from the growth of other crops being utilized in the maintenance of themselves and their families. Any benefit which might arise from the prohibition of the use of opium would be outweighed by the inconvenience resulting from it to the tenants and zemindars. If the cultivation of poppy is stopped, the tenants will lose not only what they obtain from Government, but also the seed which is left to them for utilization for making oil. It will be difficult to stop the cultivation of poppy altogether by prohibitive measures; and as opium is considered essential to health and used extensively in the Native States of Bhopal, Indore and Rajputana, the stoppage of the cultivation of poppy cannot prevent the use of opium in British territory.

19721. Is there a habit among the villagers of Mainpuri of eating opium?—Yes.

19722. Do any of the people ever eat it to excess?—Some of them eat it to excess.

19723. (*Mr. Haridas Veharidas.*) Do you take opium?—Not as a habit, but occasionally I do.

19724. Do you take it in large or in small quantities?—I take about as much as a grain of rice.

19725. (*Mr. Pease.*) In what way do you think the prohibition of opium would endanger the lives of hundreds of children?—When the children are suffering from cold or diarrhoea a little quantity of opium is given to them.

The witness withdrew.

RAI CHANDI PRASAD called in and examined (through an interpreter).

Rai
Chandi
Prasad.

26 Jan. 1894.

19726. (Chairman.) You are a landholder in the district of Agra, a Government pensioner, and I believe you were for some time Dewan of the Burwani State in Central India, and Political Superintendent of the Chatterpur State, Bundelkhand?—Yes.

19727. Your experience has been among the Rajputs and all other higher castes of Rajputana, Bundelkhand and Malwa, and extends over 40 years?—Yes.

19728. You were Deputy Collector in the Ulwar State?—Yes.

19729. What have you to say with regard to the use of opium in Rajputana and Malwa?—In Rajputana and Malwa 90 per cent. of the Thakurs use opium diluted in water, which they call *kasumbha*. In Chatterpur and many States of Bundelkhand, *madak* and *chandru* have been in use for the last 20 years, and because *kasumbha* is very much used in Rajputana, opium-smoking is not much prevalent there. Opium-eating begins generally between the 30th and 40th year of age, and opium-smoking in in Bundelkhand between the 20th and 30th year of age.

19730. What is your belief with regard to the use of opium as a protective against fever?—Opium is not generally believed to be protective against fever. Even in the hilly parts of Central India, where malarial fever is much prevalent, opium is not used as a remedy for fever.

19731. What do you consider to be its effects as helping working men to get through their work?—Opium is not believed to help working men to get through their daily toil, except in the case of those who are addicted to opium-eating.

19732. How are the practices of opium-eating and smoking regarded by the people?—Opium-eating and smoking are looked upon as disgraceful, so much so that opium-smokers feel shame to smoke in the presence of their superiors and other relations.

19733. What do you desire to say with reference to the present licensing system?—The facility with which opium can be procured from the market is the evil of the present licensing system. It has spread a very injurious custom among the women of India to give daily a little dose of opium to their infant babes. Opium, on account of the same facilities, is also a ready means of suicide among young men and women of India. A register of habitual opium-eaters should be kept, and they should get a certificate entitling them to get their dose daily. The sale of opium should be entrusted to druggists and medicine sellers, recognised by the Civil Surgeon, the District Magistrate, or the Municipal Board, and should be as strictly supervised as that of arsenic or strychnine. Opium as a medicine should be given on production of a certificate of a doctor, respectable hakim or Vaid.

19734. What do you desire to say with reference to the cultivation of the poppy?—My experience as to the cultivation of the poppy has been in Malwa and Nimar, in Central

India. In Malwa opium dealers generally give the *takavi* or advance money. The profit itself induces the cultivators to grow the poppy in preference to other crops. Poppy does not grow in poor soil, and requires three times the labour and irrigation needed for other crops. The opium crop very seldom exhausts the soil, because it is strengthened annually by manure and timely irrigation. Other crops cannot be raised on the same soil the same year.

19735. (Maharaja of Darbhanga.) Do you mean that other crops cannot be raised in the same year, or do you mean at the same time?—In the same year.

19736. Indian corn can be grown in the same year, can it not?—No, it cannot. In the beginning of April the poppy crop is ripe, and as soon as the poppy crop has been cut there are no rains, and therefore there is no facility to grow any other crop.

19737. (Mr. Wilson.) Is it not a fact that Indian corn or some other crop is constantly grown before the poppy is sown,—within the same twelve months? Does the poppy crop occupy the ground for the whole of the twelve months, and render it impossible to grow anything for twelve months?—It occupies the ground the whole year.

19738. (Mr. Haridas Voharidas.) You say that after the poppy crop is taken there is no rain; so that no other crop can be grown. Poppy is grown by well water: why should not another crop after the poppy crop is taken be also irrigated by the same well? Why should rain be required for another crop after the poppy crop?—No crop can be sown or ripened in summer.

19739. Do you not think that *chana* (gram) would do?—That is a very poor crop.

19740. You mean to say that no crop equal in value to poppy could be grown?—That is so.

19741. Before poppy is grown during the rains they sow Indian corn?—No. Poppy is always sown and grown in black soil, that is, rich soil. In rich soil no poor corn will grow.

19742. (Mr. Fanshawe.) It would not pay to grow any other crop in that soil: is that what you mean?—Yes. It would not pay. It taxes the powers of the land as well as of the cultivator to such an extent that no cultivator can cultivate any other crop. Nor will the land yield any other crop.

19743. Is there any poppy cultivation in Nimar?—Yes.

19744. Since when?—Since a long time.

19745. Is poppy grown in the Central Provinces generally?—Yes: they are celebrated for poppy cultivation.

19746. I am speaking of the British districts. Is there poppy cultivation in the British district of Nimar?—The entire district of Nimar is not in British territory. In speaking of Nimar I do not mean the British district of that name.

The witness withdrew.

RAJA LACHHMAN SINGH called in and examined.

Raja
Lachhman
Singh.

19747. (Chairman.) I believe you are a Rajput of Agra and a landholder?—Yes.

19748. Are you a retired Deputy Collector?—Yes.

19749. We shall be pleased to hear what you have to say with regard to the opium question?—*Chandru* and *madak* are the worst forms of the use of opium, and every means should be adopted to stop their use. They are injurious both for the body and intellect of the persons addicted to them. As the first step towards the eradication of these forms of the use of opium, no license should be granted to any one to open a *madak* or *chandru* shop, and no such shop should be permitted to be opened. As for opium-eating, I know of no case, notwithstanding my experience of 31 years as a Magistrate, in which an opium-eater committed any crime under the influence of opium. My father and his three brothers were all opium-eaters. None of them died before reaching the age of 75 years, and none suffered intellectual or physical infirmity more than what an ordinary non-opium-eater of their age suffers. They were moderate in the use of the drug, that is to say, each took between 8 and 10 grains a day. Generally speaking, opium is not an intoxicant that prompts the consumer to increase the dose. Its use is not considered disreputable for any

one, nor is its cost so much as to create a large number of paupers in the community. Its worst effects are that it weakens the memory and causes the eater to be constantly drowsy. It is certainly probable that if people are deprived of opium, and liquor shops are still open, they will adopt liquor-drinking. The people are neither willing nor able to bear the cost which the Government will have to incur in adopting measures for preventing the traffic in opium, or the deficiency which may occur in the public treasury on that account.

19750. (Mr. Fanshawe.) I understand that you are Chairman of a Temperance Society at Agra?—Yes.

19751. What are the general objects of your Society?—Our object is to stop alcohol.

19752. What is the name of the Society?—We only call it a Branch Temperance Society.

19753. (Mr. Pease.) What is the pledge of your Temperance Society?—Everyone has taken a pledge not to use liquor in any shape.

19754. Has it any reference to opium?—No, nothing: it is confined to liquor.

The witness withdrew.

Babu
Jyotis
Swarupa.

Babu JYOTIS SWARUPA called in and examined.

26 Jan. 1894.

19755. (*Chairman.*) I believe you are a Kayasth of Dehra Dun?—Yes.

19756. And you are a Pleader and Member of the Municipal Board?—Yes.

19757. What have you to say with regard to the question now under our consideration?—I am not in a position to say anything with sufficient accuracy about the consumption of opium by the different races and in the different districts of India. Generally speaking, the use of opium is not confined to any particular class or creed. Both Hindus and Mahomedans of all rank and file can and do take it without any prejudices of religion or caste. Rajputs, Thakurs, Dadupanthi Nagas, Sikhs and Gurkhas generally take this intoxicant. It is either taken in pills or drunk or smoked. People taking it in pills are for the most part moderate consumers, whereas those that drink or smoke it can hardly keep up moderation. Smoking is worst of all the uses of opium. It tells very much and in no time against one's constitution and produces moral debasement. Such persons who smoke *chandu* or *madak* often commit petty thefts, while those who take it in pills are often seen in as good moral and physical condition as those who do not take it. As long as one can afford to take milk and other nutritious food, so long the effect of opium-eating will not be perceptible. It is the poor people who suffer physically for want of rich food. There is a general belief prevailing amongst the natives of India that opium-eating does real good if taken after 40. It sustains a man a great deal in his declining age if he takes to opium. It is also considered a good stimulant for those living in malarious parts of the country as well as those who remain exposed to the inclemencies of the weather. It is a practice to give a very small dose of opium to infants and babies to make them sleep. It is a practice that obtains generally in almost all classes, though it is based on no consideration other than that of expediency. No one would like to bear the cost of prohibitive measures either in whole or in part. Any such measures I am afraid will not only prove offensive to the poor, but will also lead people to commit smuggling.

19758. (*Mr. Fanshawe.*) I understand that you are Secretary of a Temperance Society?—I am.

19759. What are the objects of that Society?—The object of the Temperance Society to which I belong is to forbid the use of every kind of intoxicant, specially liquor.

19760. Do you exclude opium from the programme of your Society?—No, we do not.

19761. (*Mr. Pease.*) What is the name of your Society?—It is called *Nasha Nashini Sabha*; "The Destroyer of Intoxicants."

19762. You object to the use of alcohol and opium?—Yes, alcohol especially. As a rule we have been delivering lectures against alcohol. We have not taken any other intoxicant, up to the present time: we have been taking pledges against the use of alcohol only.

19763. Do you consider opium as included in the objects of your Society?—Of course it is.

19764. And *bhāng*?—Yes.

19765. (*Mr. Fanshawe.*) You have not as yet taken any steps with regard to opium?—No.

19766. (*Mr. Wilson.*) What is the position which your Society takes up with regard to *bhāng* and other hemp drugs?—We object to the use of *bhāng*.

19767. Have you taken up that question yet?—No, we have not.

19768. Do I understand that the general objects of your Society are to discourage the consumption of all these drugs and intoxicants?—Quite so.

19769. But for the present you have been confining your efforts especially to alcohol?—Quite so; because we know that in Dehra alcohol is the chief intoxicant which is used. If you take the population into consideration and the consumption of alcohol, you will find that there is no other district in the North-West Provinces and Oudh which can come up to the same standard as Dehra in the use of alcohol.

19770. It is one of the objects of your Society to have the consumption of alcohol prohibited by law?—No. The object of our Society is not to invoke Government aid against any drug or intoxicants. We try to stop these things by moral force. We preach to the public and tell them whether a thing is good or bad; and then ask them either to do it, or not to do it.

19771. Would you yourself like to see the use of alcohol prohibited by law?—Taking the disadvantages which the people are suffering under from the use of alcohol, I would not mind it; but if I could do anything at all in the matter I would not like to invoke the aid of Government.

19772. (*Chairman.*) You would rather leave it to moral agency?—Yes.

19773. (*Mr. Pease.*) Is your Temperance Society affiliated to the Society of which Mr. Samuel Smith is President and Mr. Caine is Secretary?—I do not think, properly speaking, we are affiliated with it, but we are always in correspondence with them. Our Society is considered as one of the branches.

The witness withdrew.

Hakim
Mukarrab
Hussain
Khan.

HAKIM MUKARRAB HUSSAIN KHAN called in

and examined (through an interpreter.)

19774. (*Sir James Lyall.*) I believe you are a physician and press proprietor of Meerut?—Yes.

19775. Are you an hereditary Hakim?—Yes; two or three generations.

19776. Did you read under any particular master in medicine?—Yes; I read under several masters. One was Hakim Buldeo Singh; and another Asan Ulla Khan, Wazir and Physician to the King of Delhi.

19777. We shall be glad to hear what you have to say on the opium question generally?—In the North-Western Provinces no particular race is given to the use of opium. In some parts of India, such as Marwar, Malwa and Native States, etc., people use it as their daily habit and as a mark of civility. It is commonly used in marriages and other ceremonies also. In these countries opium yields the highest crop. This is the only cultivation on which the payment of the Government revenue depends and by which landlords and tenants are prosperous. There is no other produce which might help the people in paying off their Government dues and deriving benefits. The general disposition of the people of India is not averse to the use of opium when taken in small quantities for the sake of necessity. Besides medicine it is used for luxury and intoxication and without necessity: for companionship only. Opium yields the highest crop and an enormous amount of revenue. The people will not be willing to bear with the whole or part of the expenses if preventive measures were to be adopted, but on the contrary a

general feeling of discontent will run among the people. In case the cultivation of opium be altogether stopped at once it is not Government who will lose something, but the landlords and their tenants will go to ruin and the lives of opium-eaters will be in danger. According to physics opium is cold to the third grade. It is invigorous and acts as an antidote. According to chemistry, earth ingredients are predominant in it. There is a saying "a medicine to all but disease in itself." A small quantity of opium is much beneficial to head-ache, insanity, catarrh, cold, pains in arms, diarrhoea, dysentery, fever, *sahr*, consumption, cough, burning and paucity of urine, and wound in bladder. It cheers the mind when taken in sorrow and whim. In cases of cold and catarrh I have found it very useful. I have very seldom used it in preventing tertian fever. In comparison with other medicines its mixture has been proved much efficacious in cases of *sahr* and bladder wound. Its use every day and in excess brings on loss of appetite, indolence, immorality, costiveness and emaciation. It weakens the stomach, heart, liver and the brain. The dryness of the heart renders it impossible for the blood veins to circulate the blood properly; consequently the body is weakened and becomes pale and blackish. Impotency is brought on. In the absence of opium the condition of its eaters becomes very bad. Even the weakest opium-eater can cope with the hardest task after it has been taken. It is very difficult and injurious for any man given to opium to give it up. *Madak* and *chandu* are even more obnoxious.

The witness withdrew.

Thakur
Kalyan
Singh.

26 Jan. 1894.

19778. (Sir James Lyall.) I believe you are a Rajput?—Yes.

19779. Are you Manager of the Awa Estate in the Etah district?—Yes.

19780. What are your opinions of the opium question?—My knowledge of the matter extends to the districts of Aligarh, Etah, Muttra, Agra, Mainpuri and Allahabad only. In these districts opium is consumed by all castes. Its use is not restricted to any particular class or race. The number of persons using opium is not very large. The effect of the consumption of opium on the moral and physical condition of those who use it in moderate quantities is good. The natives of India think it better to use opium than any other intoxicants, as it is generally conducive to good health after the age of 40, provided it is moderately used. The natives of the country would be very unwilling to pay any sort of tax imposed to defray the expenditure now met from opium revenue. The profit derived from opium cultivation is very great. The opium cultivators receive advances from the Opium Department, and for this reason the zemindars realize rents with facility. Moreover, the cultivation of opium is much more profitable to cultivators than the cultivation of anything else. Its stoppage will result in serious loss to the cultivators and the zamindars, and will prove detrimental, it is to be feared, to the quality of the soil. With the exception of the Allahabad district, of the produce of which I know little, the cultivation of poppy is not very extensive in the other districts mentioned by me. The reason, as far as I know, is that the tenants fear extortion and accusations of illicit possession or sale, etc., of opium that they experience at the hands of the subordinate employes of the Opium Department. In respect of opium cultivation my experience goes as far back as 20 or 22 years, and for some time opium cultivation was carried on in my own *sir* land. At present it is cultivated in some of the villages of the Awa Estate, of which I am the Manager.

19781. Have you any other remarks you would like to add?—I would not like to see the cultivation of opium prohibited. It would give rise to very great deal of discontent in the country, and it would be quite impracticable.

19782. Are you a landholder yourself?—Yes.

19783. In what district?—In the Aligarh district.

The witness withdrew.

K HANZADA ABDUL KARIM KHAN called in and examined (through an interpreter).

Khanzada
Abdul
Karim
Khan.

19795. (Sir James Lyall.) I believe you are a Pathan and landholder in the Tarai portion of the Naini Tal district?—Yes.

19796. And you are also an Honorary Magistrate?—Yes.

19797. What can you tell us on the question now under consideration?—I have been bred and born in the Tarai. I know all and everything about the Tarai people. The country is right under the hills; the people are always suffering from the effects of the damp nature of the climate, cold, catarrh, asthma, etc. From the use of opium they obtain considerable relief in all these ailments, and it relieves them specially from irritating coughs. When the eyes pain them they use opium by outward application as ointment to relieve pain and also drop opium mixture in the eye. All men who suffer from catarrh and get feeble take opium regularly as a tonic and it gives them relief. By rich and poor opium is administered to children in arms as a soothing draught. People in my village obtain opium from the Gadarpur tahsili four miles off, where they get the good drug easily. The people would consider it a great hardship if they were not to get it at Gadarpur tahsili, and if they had to go long distances, as, for instance, Naini Tal. The peasantry have to work all day long in fields full of water. By the use of opium after the day's work chills and fever are avoided. Opium is taken in two forms—mixed with water as sherbet and in the form of small pills. The sherbet works more quickly, but they both, sherbet and pills, have eventually the same effect. I do not know of any excessive use of opium in the Tarai. The dose taken during the day does not exceed a *masha* ($\frac{1}{8}$ th tola); for an infant the dose does not exceed 1 "ratti" or $\frac{1}{4}$ th of a *masha*. Malarial fever is very prevalent in the Tarai; the soil is damp and water-logged; there are great changes in temperature from heat to cold. The moderate use of opium gives rest at night and prevents fevers and is very beneficial for coughs. I have known the Tarai for 25 or 30 years. People use opium and derive great benefit from it.

19784. What is the size of the Awa Estate of which you are Manager?—The Awa Estate includes 3 lakhs of bighas of land. The Government revenue is about 4 lakhs a year.

19785. What is the number of the villages?—More than 500.

19786. Is there any poppy cultivation in the Aligarh district?—A very little, in the Secundra Tahsil.

19787. (Mr. Wilson.) In your opinion is the effect on the moral condition of those who consume opium in moderate quantities good?—Certainly it is; especially for those who are above the age of 40.

19788. The number of persons who use opium is not very large?—No.

19789. If it has such a good effect upon them, would you like to see more people using it?—If they use it of course I would have no objection.

19790. Would you be glad to see the number of persons using opium increased for the sake of the good effect it has upon the moral condition?—I would not like that.

19791. Why?—Because, if used without necessity, it is a sort of luxury. Moreover it would be a little expensive, and under the present circumstances of our country we are not so well-to-do,—especially we people who live in the villages—that we should increase our expenses by taking on any additional expenses.

19792. Do you think that the regular consumption of opium in small quantities is a good thing for persons between the ages of 20 and 35?—No, I do not think it is. Of course under certain circumstances and for certain diseases opium is taken. No one takes it without necessity. It prevents diarrhoea and other diseases. At any age if opium is used by persons to prevent these diseases, I would like it.

19793. If a man is in good health and is 20, 30 or 40, you think he is better without opium?—Yes, if there be no necessity to use it.

19794. (Mr. Moubray.) Is there any desire on the part of the people in the districts with which you are acquainted to have the present arrangements altered or interfered with?—No, not in the least.

Search the house of any labourer or tenant and you were be certain to find small quantities of opium—2 or 3 *mashas*. I am not a habitual opium-taker, but I know its value; and I always have some in my house for occasions. Out of 100 men selected at random 10 would take opium regularly in small quantities—one *masha* or so a day. About 75 per cent. would be casual users, taking as they thought desirable for their health in smaller doses, say an average of $\frac{1}{4}$ to $\frac{1}{2}$ *masha* a day. There is no *chandu* smoking in the Tarai, and I have had no experience about this form of consumption. I know nothing about the use or abuse of opium in cities, where I have only paid occasional visits. I have been Magistrate (Honorary) for 14 years since 1879. I have noticed no connection between opium and crime such as theft, etc. Men do not take opium in any large quantities that they should require much money, nor do they get intoxicated and senseless. They take opium only as a relief, as a tonic and as a soporific soother. I consider the manufacture of opium by Government as a boon, and it should so remain with the State. Outsiders, if entrusted with the manufacture, would adulterate and admix noxious drugs with it, which would cause great injury to the people. Any rise in price would be much resented by the people.

19798. What is the caste name of the Tarai people?—They are called by the name Turak, Rain, Shaikhs.

19799. Are the Turak and Rain people Hindus or Mahomedans?—They are Mahomedans.

19800. Do they use opium?—Some use it on account of disease, and others use it when their constitutions are disturbed by fever or cold.

19801. Do they use alcohol?—No.

19802. Are any of the people Hindus?—Yes.

19803. To what class do they belong?—Lodhis, Banias and Brahmans.

19804. And do they use opium?—Yes.

Khanzada
Abdul
Karim
Khan.

19805. Do they use alcohol?—Alcohol is not used by the Banias and Brahmins, but it is used by the Lodhis.

19806. It is considered lawful by the Lodhis?—Yes.

26 Jan. 1894.

19807. (*Mr. Wilson.*) Do you think that about ten men in a hundred take a little opium regularly?—Yes.

19808. Do the women take it in the same proportion?—Ten per cent. including men and women.

19809. Do as many women as men take opium?—There are a less number of women who use it than men.

19810. Why do not the women take it as much as men?—Men are required to work abroad in the cold and in water; whereas women have only to sit within their houses.

19811. (*Mr. Moubray.*) Do you think that there is any wish on the part of the Tarai people to have the present arrangements, with regard to opium, altered or interfered with?—As far as I have made enquiries I have come to find out that these people say that if they do not get opium in that cold and rainy part of the country they will become utterly worthless, and their lives will be endangered.

The witness withdrew.

[Note.—By agreement on account of pressure of time the remaining witnesses taken on this date were not cross-examined.]

Seth Mangi
Lall.

SETH MANGI LALL called in and examined (through an interpreter).

19812. (*Sir James Lyall.*) Where do you live?—In Muttra.

19813. What are you?—I am the Manager of the Banking business of the Hon'ble Seth Lachman Das, C.I.E.

19814. As Manager of that business, do you travel about the country or remain in Muttra?—I have to travel.

19815. What have you to tell us with regard to the opium question?—I have been Senior Manager of the Muttra Seth's banking business for 40 years, which is carried on at Muttra, Bombay, Calcutta, Delhi, Agra, Jaipur and other places. Opium is consumed in Rajputana and Malwa by persons of all castes and ages, and by people of all castes in the North-Western Provinces, but to a less extent. Moderate use of opium does not affect the moral and physical condition of the people. The drug is, on the other hand, beneficial in certain diseases. The people of India have a great liking for the use of opium for non-medical purposes; also they would be reluctant to pay the cost of prohibitive measures, but would rather do so than be deprived of the drug altogether. The prohibition of the poppy cultivation in India would be a serious loss to Government and the cultivator. The financial consequences of doing away with the whole or any portion of the opium revenue, which amounts to about six crores of rupees, would be almost disastrous to India in the present condition of its finances. It would be an extremely difficult task to fill the gap caused by the loss of the opium revenue, and the imposition of additional burdens upon the tax-payer for this purpose would produce great discontent throughout the country. If the cultivation of poppy were prohibited in India, it would also be a serious loss to the cultivator. The poppy crop is of much value to the ryot in Malwa and

in those parts of British India where it is now grown. In fact there is no such valuable crop in those parts of the country. If the cultivation of the poppy were prohibited in India, it would be a serious loss, not only to the ryot but also to the land owner. The latter would, in the event of such prohibition, be deprived of the high rents which he now gets from poppy lands, and the cultivator would be obliged to grow less valuable crops. The ryot's earnings will thus be reduced, and his material condition unfavourably affected. Poppy cultivation on the average yields him a more considerable profit than he could possibly derive from any other crops. If it were prohibited, the ryot would probably sow his poppy lands with wheat and other crops, which would yield him much less profit than that of the poppy. The advantages of poppy cultivation are indeed very great. It gives large revenue to the Government, affords greater profits to the land owners and the cultivators, and creates employment for a larger number of labourers who work and earn their livelihood. On the other hand, no appreciable advantages are likely to be derived from the cultivation of other minor crops. The loss resulting from the prohibition of poppy cultivation would not be confined to land owners and cultivators, but would affect almost every class of the community. The consequences of such a measure would be disastrous to the trade of India and would affect the prosperity of the country, and might produce other evils which would prove irreparable. If the cultivation of poppy were prohibited, Malwa, which is one of the most prosperous provinces in India, would be almost ruined. Those persons who have acquired the opium habit must have their supply of the drug, or else they would succumb to death, and if they could not obtain licit opium they would be compelled to use illicit opium, and thus would expose themselves to the consequences of criminal prosecutions.

The witness withdrew.

Lala
Ganga
Prasad.

LALA GANGA PRASAD called in and examined (through an interpreter).

19816. (*Sir James Lyall.*) I believe you are a merchant of Cawnpore?—Yes.

19817. What kind of a merchant are you?—I carry on trade in cotton. I am also a landholder.

19818. Are you a member of the Municipal Board?—Yes, an elected member.

19819. How long have you been an elected member?—For the last six years.

19820. What do you wish to say with regard to the question under consideration?—Opium is used by men of every caste and creed. In Rajputana it is used largely. Among the opium-eaters in Cawnpore the number of Mussalmans is greater than Hindus. Opium is used generally by the Mussalman manual labourers. It is the general idea that after the age of forty years the use of opium is beneficial to the health. Use of opium does not degrade the eater morally. Crime and use of opium have no connection whatever. Opium used with good diet is beneficial.

Use of opium merely for intoxicating purposes is regarded as reproachful by the people generally. The use of *chandu* and *madak* is considered hurtful. The prohibition will produce general discontent. No man will ever be willing to pay a pice for the prohibitive measures. The cultivators will suffer from the prohibition, because the cultivation of poppy is more paying than grain crops, and zemindars get their rents easily from the cultivators.

19821. (*Mr. Wilson.*) Do you consider the use of opium for persons in perfect health and under the age of forty a good habit?—It would be useful if they take a little opium with nourishing food, but if they take it to excess it will do harm.

19822. If they have not nourishing food what then?—It will not do them any good.

19823. (*Mr. Fanshawe.*) You have said the use of opium merely for intoxicating purposes is "regarded as reproachful" by the people generally: do you mean by that the use of opium in excess?—Yes.

The witness with drew.

Khan
Bahadur
Asad-ulla
Khan.

KHAN BAHADUR-ULLA KHAN called in and examined.

19824. (*Sir James Lyall.*) Are you a Pathan?—I am a Kamboh Sheikh.

19825. And a native of Meerut?—Yes.

19826. And I believe you are an Honorary Magistrate?—Yes, and I am Vice-Chairman of the Meerut Municipal Board, and Vice-Chairman of the District Board.

19827. Are you an elected or appointed member?—I am elected member of the District Board and appointed member of the Municipal Board.

19828. Are you also a landholder?—Yes.

19829. What have you to tell us?—I beg to state that I have served Government for a period of 24 years in the Northern India Salt Revenue Department, and by virtue of the office had the power to search and apprehend persons in possession of illicit or contraband opium. During my tenure of office I served in the following districts, and my experience must be considered as confined to them. I served in the Central Provinces from 1865 to 1879, in the districts of Betal, Hoshangabad, Nagpur, Chanda, Khandwa and Narsingpur; in Punjab in the districts of Rawalpindi and Gurgaon, as also at the Pachbaddra salt source in Rajputana, and in the districts of the Meerut Division of the North-Western Provinces. I am not in a position to offer any evidence as regards the consumption of opium by different races; but so much I know that it is used by the generality of people, particularly by the poorer classes; and a moderate use of it has no bad effect on the moral and physical condition of the people, and is no doubt a boon and a blessing to

The witness withdrew.

KHAN BAHADUR MUHAMMED ALI KHAN called in and examined.

19833. (*Sir James Lyall.*) I believe you are a landholder of the Bulandshahr district?—Yes.

19834. And you are an Honorary Magistrate and member of the District Board?—Yes.

19835. How much land do you own?—I own fourteen or fifteen villages.

19836. What is your tribe?—I am a Pathan.

19837. We shall be pleased to hear what you have to say with regard to the opium question?—Opium is used more or less by every race and in every district in India. Some persons take it in large doses and some take it in small doses. The morals of the opium-takers are never debased like the bad drunkards. The physical state of them often is healthy, but the opium-smoker's health is not very well. Specially opium affects badly those who are not well off and cannot find rich diet. The people of India generally think that the use of opium is not injurious in any way, whether it may be taken as medicine or as a habit. And they do not like the prohibition of it at all in India, because its prohibition would be more injurious for their health than its use. The people of India generally are unwilling to bear in whole or in part the cost of the prohibitive measures.

19838. What is the general view amongst the Mahomedans in India as to opium being prohibited in any way by their religion?—Alcohol is prohibited expressly by our religion. There are some poisons which spoil the brain and head and make a man senseless, and therefore they are prohibited, but not in the same manner as liquor is prohibited.

19839. In fact liquor is expressly prohibited and other drugs are prohibited which affect the brain?—Yes. There is no word to mean intoxication. The word *muskir* means liquor, spirit. Opium is another thing and *bhāng* is another thing. Wine is unholy in our religion. Opium is allowed for the child and for the patients, and for those persons who are ill. Opium in our religion is not prohibited like liquor and *bhāng*.

19840. Have you been a Member of the Legislative Council of the Viceroy?—Yes.

The witness withdrew.

LALA DARGAHI LAL, RAI BAHADUR, called in and examined (through an interpreter).

19851. (*Sir James Lyall.*) I believe you are a Pleader?—Yes, and I am an Honorary Magistrate and landholder in the Cawnpore district.

19852. How long have you been an Honorary Magistrate?—For 15 years.

19853. What is your opinion on the consumption of opium?—As far as I am aware the use of opium in a fixed quantity benefits health, and does not, like liquor, injure the health or general moral condition of the people. People who use opium in large quantities for non-medical purposes are not well thought of. The people are not willing to bear the extra cost of prohibitive measures.

them. Opium-eating is not habitual, nor does it possess any inducement for people to take to it without any cause. I have never heard of opium having been taken for anything but medical purposes; it is as a rule used as a preventive against many ailments common to India. The abandonment of its use would increase mortality to an enormous extent, especially in the aged and infants. The people are not prepared to give up opium, which is used as medicine in almost every house, nor are they prepared, or inclined to bear, any cost of prohibitive measures.

19830. You say "I have never heard of opium being taken for anything but medical purposes;" but is it not rather difficult to say where taking opium for medical purposes ends and where taking it for pleasure and comfort begins?—Yes.

19831. If a young man of thirty or so took opium every day in small doses, would you consider that taking it as a luxury or for medicine?—If he did not require it for medical purposes it would be taking it as a luxury.

19832. I suppose there are a certain number of people who eat opium for a luxury?—Very few that I know of.

19841. In what year were you a member?—I was first a Member of Council in 1889.

19842. (*Maharaja of Darbhanga.*) You say that opium is allowed to the sick and to children. Does not that in a way imply that it is not allowed for non-medical purposes and for those who are not children?—I cannot quite answer you clearly. Anything which makes a man senseless or causes any intoxication is not allowed according to our religion; but the prohibition of those things is not quite equal.

19843. Then you think that opium is unlawful, but is not unlawful to the same extent as wine?—That is so. Nobody can put his feet out of the line.

19844. (*Mr. Wilson.*) You have said that the effects of opium on those who are not well off and cannot find rich diet are bad?—That refers to smoking, and of course to those persons also who take it in large doses and who are not well-to-do.

19845. If a man is very poor and cannot get good food, is opium a good thing for him?—No, it is not a good thing for him, because without getting a rich diet opium has a bad effect.

19846. (*Mr. Mowbray.*) Is it so bad that you would like to see it stopped by law?—No.

19847. Do any of the tenants on your estate in the Bulandshahr district grow poppy?—No, not at all. I do not know about the cultivation and about the profits.

19848. (*Mr. Haridas Voharidas.*) Do you wish us to understand that the use of opium is prohibited by your religion when it makes a man rather stupid or intoxicated?—Yes.

19849. If it does not do that, and if it is taken in such a way as not to impair the faculties, it is not unlawful?—Quite so.

19850. (*Maharaja of Darbhanga.*) Would liquor, even in very small quantities, be prohibited?—A drop of liquor even is prohibited.

The witness withdrew.

Khan
Bahadur
Asad-ulla
Khan.

26 Jan. 1894

Khan
Bahadur
Muhammed
Ali Khan.

Lala
Dargahi
Lal, Rai
Bahadur.

*Lala
Dargahi
Lal, Rai
Bahadur.*

26 Jan 1894.

19858. Have you any personal knowledge of people who have been entirely broken down in health from the use of opium?—I know of one or two persons in the Cawnpore district.

19859. Were they rich or poor people?—They were poor people.

19860. To what profession did they belong?—Some of them took to service; the rest were devotees.

19861. Among the village and cultivator people have you seen any instance where they have ruined themselves?—I live in the city of Cawnpore, so I do not know.

19862. Is your knowledge confined to the cities?—I have seen cases only in the city. I never go to the villages.

19863. (*Maharaja of Darbhanga.*) Is not a large percentage of those people who have been spoiled by the misuse of opium fakirs?—Most of them are poor and most of them are fakirs. Neither do they get good food, nor do they have big salaries.

19864. The effects would be bad because they do not get nourishing food?—That is so.

19865. (*Mr. Pease.*) Do you think it is a good thing for people who do not require it as medicine to take opium?—I would not consider it good if they took it immoderately.

The witness withdrew.

*Risaldar-
Major Shadi
Khan,
Sardar
Bahadur.*

RISALDAR-MAJOR SHADI KHAN, SARDAR BAHADUR, called in and examined (through an interpreter).

19874. What regiment did you serve in?—I was admitted in the 4th Regiment, and then I was sent to the 5th Regiment. In those days it was considered the 7th Regiment; but at the time of the Mutiny it became the 5th Regiment.

19875. Did you see any service in campaign before the Mutiny?—Yes, in the Bhil country. I also went to Kabul.

19876. In what year did you enter the service?—In 1826.

19877. We shall be glad to have your opinion with regard to the subject under our consideration.—Formerly the climate of Hindustan was not so bad, but for some time past, *i.e.*, since the introduction of the canals, it has become damp, in consequence of which the public have taken to the use of opium, as it does them good and keeps them safe from dampness. In all my life I have never seen any opium-eater to have become insensible under its influence. In most of the villages opium is administered by the people to their children, and in certain diseases it effects a cure. In most of the districts in the Punjab and the North-Western Provinces the cultivation of opium is the only means of the payment of rent by the cultivators to the zeminders, and the Government revenue also is thereby easily paid. As far as my experience goes, opium does not exercise any injurious effect on this country: on the other hand, it does good. If in order

The witness withdrew.

[NOTE.—By agreement, owing to pressure of time, the remaining witnesses on this date were not cross-examined.]

*Lala Nathi
Mal.*

LALA NATHI MAL called in and examined.

19882. (*Chairman.*) I believe you are a trader of Khurja in the Bulandshahr District?—Yes.

19883. What have you to say with regard to the consumption of opium and the question generally?—In my opinion, the consumption of opium is to a more or less extent common among the different races in all parts of India. As far as my experience goes, the consumption of opium, when it is taken in moderate quantities, does not exercise any evil effect on the physical condition of the people, nor does it affect the morals of those accustomed to its use. Moreover, people suffering from cold and diarrhoea derive benefit from the use of opium. Business people who are addicted to the use of opium have been found to do their work with great attention and interest when under the influence of it. As far as my experience goes, the use

The witness withdrew.

*Pandit
Indar
Prasad.*

PANDIT INDAR PRASAD called in and examined.

19884. (*Chairman.*) I believe you are a Pleader of Muzaffarnagar and a member of the Municipal Board?—Yes.

19866. Would you consider it a good thing for a young man or a young woman to take it at all?—If they go on increasing the doses I would not consider it good.

19867. (*Mr. Wilson.*) Is there any poppy grown on your estate?—Poppy is cultivated only in one pargana. For the last six years it has been prohibited in the Cawnpore district.

19868. What is the quantity of opium which you think benefits the health?—Two *rattis*, and this should be continued in the same dose—it should not be increased.

19869. Do you think it is a good thing for a young man between 20 and 30 years of age to take two *rattis* every day?—If he continues it only in that dose it will be good to his health; it prevents cold, etc.

19870. (*Mr. Mowbray.*) Have you ever taken opium yourself?—I did not take it of my own accord. I was very ill and the physician gave me a very small quantity of opium, and then I took it.

19871. Have you continued to take it since?—If any man gives it to me I take it, but sometimes he forgets to give it to me and I do not take it.

19872. How old were you when you began to take it?—My age is now seventy-seven, and I began to take it when I was thirty or thirty-two.

The witness withdrew.

to provide for the cost of prohibitive measures Government were to impose any fresh tax on the people, it will be injurious in three ways: (1) the revenue derived from opium will cease; (2) the people will become subject to the new taxation; and (3) the easy remedy used by the poor people for the diseases of their children will be lost to them. Besides this all the people who have in consequence of the damp climate become accustomed to the opium will suffer if deprived of it, and the cultivators and zemindars, who entirely depend on the cultivation of opium, will be put to great loss. During the two Kabul wars and the expeditions to Malta and other places situated in cold countries, which have been undertaken by Her Majesty's Government, I often times saw my comrades in arms using opium in small quantities; and, on my asking them as to what benefits there were in its use, I was told in reply that in cold countries it keeps them safe from diarrhoea, damp climate and cold, etc. I too some times took a little opium and found its advantages fully proved.

19878. In your district do you think the use of opium has increased on account of the increased dampness?—In my district most people do not take it.

19879. Do you think the custom has increased or is it the same as it used to be?—In my village it is just the same: it has neither increased nor diminished.

19880. (*Mr. Haridas Voharidas.*) How old are you?—Eighty-six.

19881. Are you an opium-eater?—No.

The witness withdrew.

of opium does not cause any injury to the bodily system, nor does it exercise any bad influence on the moral condition of the country. I think that opium is mostly consumed in Malwa and Rajputana, and the effect of its consumption is the same for medical and non-medical purposes. Among the various races inhabiting most of the districts the use of opium is common without regard to its medicinal properties. In my opinion, opium has become one of the very necessities of life to those who use it, and no prohibition of the people of India can be made in regard to the consumption of opium for medical and non-medical purposes. In my opinion, the people of India cannot bear the cost of any prohibitive measures, nor can they under any circumstances be willing or agreeable to any such arrangement.

The witness withdrew.

—Since my nomination to appear before the Royal Commission on Opium to give evidence, I made inquiries from several of my friends and others whom I considered to be ripe in experience on this rather complicated question. I give below all that I have been able to gather on the question from them. I have had personal experience of this matter, as I myself eat opium for the last 20 years, and I can speak with certainty of the merits or demerits of it. In my humble opinion, the total prohibition of opium is neither advisable from a political point of view, nor is it reasonable, looking to the long-established habits of the natives of India. There are very few people who do not use opium in their old age. I think it is somewhat beneficial to their health at this period of their age. Most women are in the habit of administering a little opium to their offspring to make them lie down quietly under its influence while they attend to their domestic duties. Thousands of men use it in one way or other. This is the only intoxicating drug which the Hindus and Mahomedans consume freely without any religious restrictions as to its consumption. If the cultivation of opium is stopped, spirits and liquors will take its place, and the latter will be more calamitous to the natives of India than the former. The use of alcohol has of late alarmingly increased in India, which is far more injurious than opium. There is no doubt in my mind that opium is injurious to health generally and to young men especially. It destroys memory, brings on idleness and drowsiness. The person who eats or smokes opium always complains of

constipation, and can never be an early riser. I am surprised to hear the evidence of those gentlemen who pronounce opium as uninjurious and say that it acts like an invigorating dose. The fact is that he who uses it regularly can never live without it. To opium-eaters the opium is one of the necessities of life, without which they are like dead bodies. It is very difficult for one to confine himself to its moderate use. Any one beginning it with half a grain will assuredly double or treble the quantity in a short space of time, and can never be made to give it up altogether. In Assam or the like provinces it may be beneficial to health, but in these provinces it is decidedly injurious to young men. But, notwithstanding the evils detailed above, I cannot recommend its total prohibition, but would suggest some restrictions to be put to its sale. At present the licenses are given too freely, and the shops are placed at their very doors. I would suggest that the number of licenses be reduced to as small a number as practicable without giving trouble to those who wanted opium. I would suggest the closing of opium-smoking dens at once, because the opium-smokers command no respect in society and are always looked down as worthless fellows. If the cost of prohibition mean to make up the loss of revenue by a fresh taxation, I submit that, looking to the poorness of the country and of natives, who are already overburdened by taxes, the people are neither able to bear cost of prohibitive measures nor willing to bear it. I would not even suggest the restriction put to its sale if the people will have to bear cost.

Pandit
Indar
Prasad.

26 Jan. 1894

The witness withdrew.

DAMOR SINGH called in and examined.

19886 (*Chairman*.) I believe you are a pensioned Risaldar of the 3rd Bengal Cavalry, and a resident of Nayabas, Thana Gulaothi, of the Bulandshahr District?—Yes.

19887. What experience have you had of the opium habit?—I was in service for 24 years and 6 months, out of which I passed 18 months in the field at Kabul, Kandahar, Ghazni, etc. During this period whenever I felt cold or suffered from dysentery I invariably used opium, which gave relief to my sufferings. Had there been no opium it would have been impossible to obtain any relief. When our

regiment was stationed at Allahabad, Cawnpore and Lucknow, I often met the zemindars and cultivators, and learned that the cultivation of opium was the only means of paying their rent and revenue. If the cultivation or use of opium were prohibited and some other tax imposed in its stead, the people will not be able to bear it. I have never seen any one who took opium to have become intoxicated with it, or insensible or mad. On the other hand, opium is administered by way of medicine to very young infants and does them considerable good.

Damor
Singh.

The witness withdrew.

CHAUDHARI GHASI RAM called in and examined.

19888. (*Sir James Lyall*.) I believe you are a zemindar of the Muzaffarnagar District?—I am also a member of the District Board and Honorary Magistrate.

19889. Are you an elected or nominated member of the District Board?—I am an elected member. The Government inquired from the people whom they wanted, and I was selected.

19890. We shall be glad to have your opinion on the opium question?—In India opium is used by all without distinction of caste or race from an ancient time. In comparison to this district, it is excessively used in the eastern and southern parts of India, in Punjab and in the Rajputana States. The women of all castes administer opium to their infants for the sake of their health, which keeps them healthy and flourishing. Its moderate consumption

is in no way injurious, but excessive use makes a young man weak and lean. As the climate of this country has recently become damp by construction of many canals, its consumption is a protective measure for certain head diseases—catarrh, etc.; for it keeps an old man nervous, preserves him from phlegmatic diseases, and improves his health. The consumption of opium does not produce any effect on the moral condition of the people, but it affects the physical condition of those who are addicted to use it, because it becomes beyond their power to give it up; but if they do so the result would be death. As far as I think, the consumption of opium keeps health steady and prevents idleness in old age. The opium is not used in non-medical purposes. Nobody will willingly bear the whole or in part the cost of prohibitive measures.

Chaudhari
Ghasi
Ram.

The witness withdrew.

RESALDAR-MAJOR SYAD NUR-UL-HASAN called in and examined.

19891. (*Chairman*.) I believe you have served in the 6th Bengal Cavalry?—Yes.

19892. You are a resident of Jalali Aligarh?—Yes.

19893. What have you to say with regard to the consumption of opium?—In Aligarh District opium is very little used. About 6 per cent. probably may be using it. In other districts, such as Lucknow and Cawnpore, it is greatly used. In the 6th (Prince of Wales') Bengal Cavalry in which I have served for thirty-six years about 3 per

cent. used opium. Opium does no harm to those who use it in old age on account of some disease; but it does harm to the brains, and makes the limbs useless, of those who use it from youth and gradually increase the dose. Such people become quite useless in the region of ice, and cannot bear the severity of cold. If, perchance, they could not get opium for one day it would be difficult for them to get up from their beds. In my humble opinion, opium is a most injurious substance; but it will be bad for those who are accustomed to its use to give it up.

Resaldar-
Major Syad
Nur-ul-
Hasan.

The witness withdrew.

Adjourned till to-morrow at 10-30.

At Agra.

FIFTY-SEVENTH DAY.

Saturday, 27th January, 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
 „ HARIDAS VEHARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

The Reverend COLIN S. VALENTINE, LL. D., called in and examined.

*The Revd.
 Colin S.
 Valentine,
 LL.D.*

27 Jan. 1894. London?—Yes.

18984. (*Mr. Wilson.*) I believe you are LL.D. of Edinburgh, L.R.C.P. and S.E., F.R.C.S.E. P.—Yes.

18985. And a Member of the Royal Asiatic Society, London?—Yes.

18986. In this country you are Principal of the Agra Medical Missionary Training Institute?—I am.

18987. Will you tell us what special opportunities for observation you have had in this matter of opium?—In addition to the opportunities of a Missionary, who has moved about among the towns and villages of Rajputana, I have practised medicine for over 32 years in India. I can read and write Hindi and Urdu, and converse freely in these and several local dialects. My experience has been in Rajputana and the North-Western Provinces. I have been Surgeon to a native regiment, in charge of Jails, Physician and Surgeon to a large hospital, and was for 14 years private physician to His Highness the Maharaja Ram Singh of Jaipur, in which position I became acquainted with the inner life of the Rajput nobles. About 25 years ago I especially studied the use of opium in that part of India in connection with a work. I was then preparing a work on native medicines, and have ever since taken special interest in the subject.

18988. How far is opium-eating and drinking prevalent among the classes to whom you have referred?—About 90 per cent. of the Rajputs in my time used opium. It was also largely used by the Marwaris and zemindars of Mairwara; less so by the common people. First came in point of numbers the Marwaris (after the Rajputs), then the zemindars, who formed a considerable class; the common people were so miserably poor that they did not eat so much. It was extensively given to children in towns, chiefly by poor people, coolies. The Rajputs and zemindars ate opium and drank spirits.

18989. You have said that 90 per cent. of the Rajput-used opium: do you mean of the entire population, or of the adult males?—Of the adult males.

18990. What have you to say about opium-smoking?—I have only seen one case of opium-smoking in my life.

18991. Can you tell us at what age the habit of eating or drinking opium is usually acquired?—The habit is usually acquired between 25 and 30 years of age. I have seen very little boys eating opium—eating it whenever they could get it.

18992. What are the motives that induce people to form this habit?—There is the motive of custom. These customs are very extensive in Rajputana. Amongst the Rajput noblemen there are a number of ceremonies on certain occasions when opium is used. When they meet with each other a strong solution of opium is prepared with certain spices, colored with saffron. When a Rajput nobleman comes and is introduced to the Durbar, after the various salaams a small quantity of the solution is brought in a thing like a butter dish made of silver; a chief takes it, puts a few drops in the hollow of his hand, and his friend drinks it. Then there is another custom of the same character at certain seasons of the year. The noblemen and the officials of the State are expected to come to the Durbar; the Maharaja is seated, and they come with their presents and drink the solution out of his hand. There are a number of other customs, such as giving opium when friends meet, a small quantity being presented. At marriage festivals too a small quantity of opium is given; and at

funeral feasts opium is given to the friends who come to offer their condolence. Then if there has been a quarrel, after it has been settled, the parties go to a temple and swear an agreement of friendship, and on that occasion opium is distributed.

18993. What is the next motive for taking opium?—Many take it for pleasure—for the pleasurable sensation. Then a number of people suppose it to be a prophylactic. Some consider that it is a cure for diseases, and a considerable number use it for a very disreputable purpose.

18994. As an aphrodisiac?—Yes.

18995. Do you know whether this habit is easily relinquished, either at once or gradually?—I never knew a case where a person left off the habit except under restraint. Prisoners under prohibition suffered considerably for a week or ten days. None required to be admitted into hospital: all greatly improved in every way afterwards, but return to the habit when liberated.

18996. Is there a general tendency to increase the dose?—Certainly.

18997. What are the results of the habit, physical, mental and moral?—Deterioration in all three points. The appetite is taken away, the digestion is impaired, there is congestion of the various internal organs, congestion of the lungs, constipation and diarrhoea consequent upon it, pains all over the body. A man in the habit of eating opium is upon a lower standing than a man in perfect health.

18998. Are you speaking of small quantities taken habitually, or of what may be called gross indulgence and excess?—It is very difficult to say what is a small or a large quantity. I quite believe that a person may take a small quantity for a series of years without any very observable deterioration; but if he gets up to 5 grains or so, it manifests itself in these symptoms and goes on increasing. But, as I have said, a person never stops at 5 grains a day; he goes on to a larger quantity.

18999. Then what is the effect mentally?—The mental effect is this, that he is a sleepy man. The first effect no doubt is that the man is stimulated, and there is apparently a degree of sharpness about him for a time; but afterwards you see him sleeping, and there is immense difficulty to get him to understand anything. If you sent him to do anything that required judgment, you might be sure that he would blunder. I have had a number of servants, writers, sepoy, and native doctors under me; but if I wanted a man to do a thing that required endurance, judgment and discrimination, I never would employ an opium-eater. He would no doubt at starting be quite willing to act most faithfully, but he would not have the required capacity.

18910. Then what is the moral effect?—If a man is an opium-eater to any extent, everything is subordinated to the opium, and he will tell lies and pilfer.

18911. Is opium generally believed to be a protective against fever?—I never heard a native say so. I believe it is in the highest degree harmful in fever, and predisposing to other diseases.

18912. Is it in your opinion a protective against fever?—No, the very reverse. Practising in Mairwara I found that the people who ate opium extensively were even, if possible, more subject to fever than those who did not. I remember many years ago, before this controversy was

started, hearing from a friend of mine who used to go through that part of the country, and that is, going there once in the cold season after there had been a very wet season, almost every person in the villages was down with fever; and they were almost all opium-eaters.

19913. Is opium specially useful in malarious districts, or believed to be so?—What I have said may be taken as my answer.

19914. Is it necessary, or believed to be necessary, to enable working people to get through their daily work?—A man while under the influence of opium will do more work than when he is not; but other things being equal he will do less work and worse work than another man who does not take opium. I do not believe it is necessary. I believe it is detrimental.

19915. Is the habit looked upon as disgraceful?—Very.

19916. Is it in your opinion desirable to prohibit the sale of opium except for medical purposes?—Yes.

19917. Do you think that public opinion would favour the adoption of such a cause?—Yes. I believe there would be a great deal of grumbling if it were prohibited; there would be grumbling from those who take it and a considerable amount from those who derive profit from it, and of course from those who grumble at everything that Government does, good, bad or indifferent. But I do not think it would be anything more than grumbling. My reason for that is two-fold. In the history of India a great many things have been prohibited by Government attacking the very foundation of religious systems and entering very minutely into their manners and customs; and at the time the prohibition was proposed, great statesmen, soldiers and literary men predicted an immense amount of bad things which history has thoroughly falsified, and the prohibition has been accepted. But my principal reason is this. We have heard from the newspapers that as a body the people of India take no interest in your Commission. Now to me that silence, or that want of interest, is very decidedly significant. If the people had considered it an immense grievance, they would have been up in arms against it and there would be public meetings such as we had two years ago in regard to the Age of Consent bill. There was then an enormous amount of excitement. People went to the temples and prayed against it; there were public processions and placards and public meetings, and the papers were up. Now I am willing to take the statement of English newspapers, that practically the people of this country are not taking the slightest interest in your Commission, and from that I come to the conclusion that they would accept it, except that there would be that sort of grumbling that would be sure to take place on the introduction of any possible law.

19918. What kind of previous prohibitions are you referring to?—I have a printed paper on the subject. There is *suttee*, and there is hook-swinging.

19919. Is this paper that you refer to prepared for the purpose of this Commission?—No, it is an extract from a book written twenty years ago.

19920. It is not your own compilation?—No, it is from Dr. Smith's life of Dr. John Wilson, Dr. Wilson of Bombay tabulated it forty years ago.

19921. You hand this in as a quotation from that book, having your approval and concurrence?—These are historical facts.

19922. Your argument is that the change in regard to each of these things was protested against at the time as interfering with the customs and religion of the people, and that the reforms have all been carried out without causing serious difficulty?—That is so. The protests against them, which we can read in history, were protests by European officials of the country. There is no recorded statement that I have ever come across as to what the natives did under the circumstances; but we are told that at the time Mr. Horace Hayman Wilson, a Sanskrit scholar, protested against interfering with the manners and customs of the people in regard to the practice of *suttee*, and that the people would be up in arms against us. But none of these things have taken place in the history of India.

19923. You have referred to the Marwaris. We have had very strong evidence in different places that they are amongst the most capable and wealthy financiers of this country, and that they are large users of opium. How do you reconcile that with the fact that you would not trust such people to do business, and so on?—I would do with the Marwaris what the Marwaris do with each other. My experience in connection with that subject was confined to the city of Ajmere and Nyanagar, where there was a

large Marwari community. In carrying on business there I found that there were sometimes two or three brothers, or if not brothers there were trustworthy agents, the *gomashtas*, and I found that if even the very head of the firm was an opium-eater, he had no connection whatever with the business, that it was conducted by the younger brothers who were themselves comparatively free from the habit, or by a *gomashta* or agent who was free from it altogether. The men who actually carried on business among the Marwaris in my experience were those who did not take opium, or who took it in such small quantities that we could not see the effects.

19924. In reference to this question of malaria, about which we have had a great deal of evidence, is it your opinion that there is a strong prejudice in those parts of the country with which you are acquainted against the use of European medicines generally, and especially against quinine as causing headache and unpleasant symptoms?—The very reverse according to my experience. I have moved about for months at a time amongst the villages, and I could have distributed pounds of quinine for the ounces that I did distribute. I have known men come 30 or 40 miles to Ajmere for quinine. So far from being prejudiced against it, they have the greatest belief in it—that is my experience.

19925. We have had a great deal of evidence and opium statistics appear to show, that opium is very largely consumed in malarious districts, and it is argued from that that it is regarded by universal consent as very beneficial to the people in those districts: can you account in any way for such a state of things?—I refer to the manifestation of malaria in the shape of fever, diarrhoea, and dysentery. Whether it is on account of these manifestations of malaria that they take opium, or whether these things are developed by opium itself to some extent, I am unable to say; but they are two co-incidental facts. I never heard a native in my life say that he took opium and found it beneficial in fever. Of course I am speaking of that part of the country.

19926. In most of what you are saying, are you speaking of recent experience in Agra, or chiefly of your previous experience in Rajputana?—Almost solely my experience in Rajputana. I have very little experience of these things in Agra.

19927. When you were Surgeon to a native regiment and in charge of jails and occupying the other positions which you have described; you speak chiefly in reference to that rather than in reference to the particular circumstances of Agra?—I was Civil Surgeon in Rajputana and Superintendent of the Jail and connected with the native regiment, a local battalion in Rajputana.

19928. It has reference to that rather than to Agra?—Yes.

19929. (*Mr. Moubray*.) I rather gather that in Rajputana you consider it a very widespread custom?—It was very wide, but I should qualify that by saying that I have been out of the place for twelve years.

19930. With regard to a question which suggested itself in the examination of Sir Charles Crosthwaite, may I ask you whether as a fair-minded man you think that a parallel can be drawn between the list of manners and customs which you have handed in, such as the murder of parents, the murder of children, suicide, hook-swinging and others, and a common domestic habit which prevails so largely from day to day among large classes of people in Rajputana?—No, I do not think that a fair comparison can be made, because they were ever so much more connected with religious rites and ceremonies.

19931. I admit that from the point of view of religion they were very much more difficult to deal with than the opium question, but the point which Sir Charles Crosthwaite suggested the other day, upon which I should like to have your opinion as a resident for some time in Rajputana, is whether they were not occasional things which did not enter, so to say, into the daily life of the people; whereas if you interfere with opium you are interfering with something which is in daily domestic use. Would you not draw a distinction in that way?—The first thing upon the list is *suttee*. In the year 1817 a report was made to the High Court in Calcutta that during that year no less than 706 *suttees* had taken place in Bengal. That there were a great many more than that is probable from this circumstance, that the statistics were collected from the families of those whose members had mounted the funeral pyre and from the police. In Dr. Wilson's book you will find a calculation that altogether no fewer than 3,000 *suttees* must have taken place in that year in India. In 1857-58 a book was published giving statistics of the British possessions,

*The Revd.
Colon S.
Valentine,
LL.D.*

*The Recd.
Colin S.
Valentine,
LL. D.*

27 Jan. 1894.

including India; and it was there stated that the population of India in round numbers was 180 millions. Allowing for the increase in population, it is now taken at 280 millions. Going backwards, it would be fair to say that in 1817 there were 180 millions of inhabitants in India. Taking half that number to be females, the proportion of *suttees* would be 3,000 to 75 millions who annually mounted the funeral pyre. The conclusion is that as 3,000 is to 75 millions, so is the proportion of opium-eaters to the present population of India. It appears to me that it was a sacred rite. It had been practised for twenty centuries, and was always accompanied by religious ceremonies. When it was proposed to do away with it, Dr. Horace Wilson protested against it as striking at one of the most religious rites of the Hindus. Opium-eating is in no sense a religious rite.

19932. Then taking your own proportion, 3,000 to 75 millions, there would be now 12,000 opium-eaters to 280 millions; do you think that is so?—Very many more I should think. But I discount that by saying that one is a religious rite, and the other is a vice and looked upon by the people as such.

19933. You have told us that you are in favour of the prohibition of opium except for medicinal use; have you turned your attention to the measures to be taken to carry out such a policy?—No, I felt that that was beyond my business altogether.

19934. I think you will admit that the practical working out of such a scheme would be a matter of very great difficulty?—I should leave that to those who understand such matters. There never was a law introduced in this world that people did not oppose. It is a matter of police detail.

19935. (*Mr. Haridas Voharidas.*) You know better than I do that the use of alcohol in England is doing a great deal more mischief and injury to people there than opium is doing here?—Alcohol is the vice of Europe, and opium is the vice of Asia; each vice should be discussed on its own merits.

19936. Would it not be better for the British Government to commence at home with alcohol and then extend its benevolence to India in regard to opium?—That is a question I have nothing to do with. If a patient came to me labouring under any disease, I should study it carefully and try to cure it rather than studying half a dozen other cases that had not come under my observation.

19937. You perhaps know that alcohol is prohibited by the Hindu religion as well as the Mahomedan?—Yes.

19938. Opium is not so much prohibited as alcohol. Would you like to see alcohol first prohibited?—If a Commission sits here for the discussion of the alcohol question, I shall be glad to give evidence upon it. My present duty is to consider opium.

19939. We have to consider whether in getting rid of one evil we bring in another and a greater one. Do you think that, if opium is altogether stopped, except for medical purposes, people would be likely (human nature liking some stimulant) to take to alcohol, which is against our religion?—I am only judging from my own experience, which has been amongst people who have used both. If I were to draw any deduction from that, I would say that one vice led to the other.

19940. If one is taken away, will not the other have more force and prevalence?—I am not quite sure that I know exactly what you mean. It may be so for those who have acquired the habit, but not for those who have not acquired the habit.

19941. (*Mr. Fanshawe.*) You state that you never heard a native say that opium was used against malaria, and at the same time you state that one of the reasons for the adoption of the opium habit is its supposed prophylactic effects: how do you reconcile these statements?—My meaning is that it is stated to be so. There are quite a number of things of which it is said that a native believes so and so; and if they believe of course that would be a reason for using it.

19942. Is there a prevalent belief amongst the natives—I am not speaking of your own views as a medical man—that opium is of use against malaria?—I cannot say, because I have never heard a native say so.

19943. Although you never heard a native say so, do you think that there is such belief?—I would not say there was not a belief.

19944. You have given us, as one of the reasons for taking opium, the supposition, or belief, that it is a prophylactic?—If it is believed to be a cure for malaria, and to be a prophylactic, there is no doubt that it would be one of the causes

for it being used. But in both of those cases I have had no experience, inasmuch as I never heard a native say so either in one case or in the other.

19945. This belief may be one of the reasons why the natives take it, although no native ever told you so?—That may be one reason.

19946. You have given it yourself?—Certainly—Medically.

19947. With regard to the use of opium for the purpose of enabling a man to undergo fatigue, or to resist cold, especially in the desert, has that come within your notice?—Yes. I have often asked a native why he took opium. It is the most difficult thing in the world to get a straight answer from a native to that question. A typical answer was given to you here last night: the witness was asked, do you use opium, etc., and answered "it was prescribed to me long ago as a medicine." Thereby implying that he himself would never have commenced such a disreputable practice. In my dispensary and hospital practice and in my practice socially with the people, the answers I have had to the question have been most contradictory: "Oh! long ago,"—"I take a very small quantity,"—"I have stopped it entirely," or "I do it because so-and-so told me."

19948. Still, with your general knowledge of the country, you can say whether the use of opium for the purpose of enabling a man to undergo special fatigue, or to resist cold in the desert is known to you?—It is not known, it has been said to me, but I found that the persons were habitual opium-eaters.

19949. I do not quite understand your position with regard to the Marwari community. You say that the opium habit is general amongst the Marwaris, and you admit that they are keen business men and successful traders?—Yes; and I said that amongst every community there are different degrees in which opium is taken. I have previously explained that the opium-eaters among the Marwaris did not transact the business of the firm.

19950. In your experience is there a moderate use of opium among the Marwari community which in no way interferes with their business capacity?—There are those who take it moderately, and they are the men who conduct the business. The larger proportion, however, take it immoderately.

19951. You state that you never heard a native speak a good word for opium?—No.

19952. Do you wish us to understand that there is no feeling in favour of opium in Rajputana?—I never heard a native say a single word for opium in regard to its beneficial effects as a reason for its habitual use.

19953. Not even in Rajputana?—No.

19954. You say that 90 per cent. of the adult male population in Rajputana are in the habit of eating opium?—Were in the habit.

19955. And at the same time that no one has any opinion in favour of this habit; is not that rather a paradox?—No. It was with the greatest difficulty that I could get my Thakur friends when I went amongst them to confess that they took it. There was no shame whatever in regard to spirits. When I called upon them at a certain time, a servant would bring in a small dish like a salt-cellar with a confection or something of that appearance. I asked "What is this, Thakur Sahib, that you are eating?"—"Oh! medicine from the doctor."—"What medicine is it?"—"For giving me an appetite." I afterwards found in many instances that it was opium.

19956. Still you will admit that if 90 per cent. of the adult male population take a particular stimulant—opium, tobacco, or alcohol—there must be a fairly general belief in its advantages?—They take it for pleasure, and from having fallen into the habit of taking it, and they take it for disreputable purposes, though I personally believe that it has the very opposite effect to that desired.

19957. The prohibition of the use of opium in Rajputana except for medical purposes would be a serious interference with local habits and social customs?—Certainly.

19958. Then how do you think such interference would be regarded by the people of Rajputana?—Very variedly.

19959. How would it be generally regarded?—I believe that those who have been in the habit of taking it would grumble very considerably, but that the evil effects would be very trivial in comparison to the good experienced.

19960. You admit that prohibition would be a distinct and serious interference with the habits and social customs of the people; would it not therefore be regarded from that point of view with disfavour?—To a certain extent

they would so regard it. I should like to make a remark in connexion with that. They would regard it with disfavour; but there is another side to the question. There is a large and ever-increasing number of intelligent students who would be glad to have it stopped for the sake of their parents; and the parents would be glad for the sake of their sons. The great mass of the respectable community—that is, apart from the Rajputs—would favour prohibition.

19961. Do you mean the educated portion of the community?—No. The Rajput is respectable though he may not be educated. I exclude Rajputs. I mean men of social position outside the Rajput circle. From motives of patriotism and from a feeling that opium is doing the country harm, a great many of the people would be glad to see it abolished.

19962. The people affected by the prohibition of the use of opium would be very largely people in the districts, and particularly the Rajputs throughout the country?—It would be so.

19963. You have referred to the opposition to the Age of Consent Bill?—Yes.

19964. Was not that opposition on the part of the educated public?—I do not know: I cannot say.

19965. (Sir James Lyall.) You have referred to the number of *suttees* among the Hindus: is it not the fact that *suttee* was confined to high caste Hindus and all out side those castes to members of the family of Rajas or ruling chiefs?—That I cannot say. That the Rajputs did so to a great extent of course is evident; as to the others I do not know. I cannot answer the question one way or the other.

19966. If it was so (and I think it was) then it was a custom which did not affect the great masses of the people?—To the extent I have mentioned it would affect them. But as I have said it was really a religious ceremony, whereas all respectable people look upon the opium-habit as a vice.

19967. My point is that it is not a custom which affected the great masses of the people, but only certain privileged classes?—That I am not sure of. It might not affect them personally, but in regard to the religion it would affect the whole mass of the community.

19968. You say you never heard an Indian say a good word for opium?—Yes.

19969. Do not Indians know that Europeans generally, and perhaps missionaries in particular, dislike and disapprove of the opium-habit, and is it not the general rule of Indians, in speaking with a kind of civility, to adopt the line which they think you would like them to take?—I was not only a missionary in the sense of a preacher, but I was a medical man, and to a medical man people will open their minds in a different way from what they will to another. In balancing probabilities I give that as my opinion from experience.

19970. You speak of the great body of respectable people as agreeing in the condemnation of opium: is not that condemnation rather what you may call a pious opinion in accordance with their religion?—They are not supposed in their religion to condemn it either in theory or in practice, but it becomes a practical question affecting the great mass of the people, inasmuch as so many relatives have become perfect wrecks.

19971. Is it not the case that among the Indians generally temperance is considered a matter of respectability more strongly perhaps than among European nations?—Temperance is a very wide word. A native might be very temperate in one thing and not in another. The Hindu would be temperate upon a thing that you and I would not be affected by; therefore, as far as that is concerned, I think the parallel does not hold good. The man who likes opium takes it and says "Sahib, I cannot do without it; I know it is bad."

19972. No doubt opium might be generally condemned by all respectable people who were not addicted to it, and perhaps, as you say, it would be condemned by many of the people who were addicted to it: I suggested that that condemnation would be rather a pious opinion which they expressed as long as you did not intend to prohibit it or to interfere with it, but that when it came to the point whether opium should be prohibited by law you would find there would be a great change of opinion?—I think if it is condemned by those who used it and by those who did not use it, it would thereby be condemned by the great mass of the community.

19973. Is not that rather a pious opinion?—I do not mean merely as a pious opinion, but as a fact that they have themselves suffered by it and also their relations.

19974. You think the mass of public opinion is ready to make it a penal offence?—They are in favour of prohibition, 27 Jan. 1894. not that it should be made a penal offence.

19975. It practically comes to that, you allowed that you would have to use the police to enforce it?—They say to me: "We are perfectly unable of ourselves to stop the habit, but if Government will give an order for it, we shall obey it, and it will be a very good thing indeed."

19976. (Sir William Roberts.) In your experience in Rajputana did you find that opium was a common household medicine?—Opium was given largely in Rajputana. I would not say as a medicine, but it was given by the mothers and parents to keep their children quiet.

19977. Did not the people use it for coughs, colds, neuralgia and rheumatism?—Yes. The habitual opium-eater gives every reason for its use but the true one—that he cannot do without it. When pressed he will then admit the truth.

19978. Then it was a common domestic household medicine?—I would not say that it was a common medicine, but this was a common reason for its use as I have already said.

19979. You have spoken of the practice of giving opium to children; was it given for any purpose except to keep them quiet?—Not that I am aware of. It was generally given by the poor people, the mothers who had to go out and earn the food. Children were given in charge of a child who would not otherwise be able to look after it.

19980. Did you see any evil effect from the practice?—Yes, emaciation. I have seen hundreds of children like those pictures which were published by the Anti-Opium Society: I have heard medical men say that they had not seen such cases; I have seen hundreds of such emaciated children.

19981. Have you seen enlarged spleens in infants?—Yes, but it is not common.

19982. I mean malarial spleen?—That I do not know.

19983. Have you ever seen a death in infants from this practice of giving them opium?—I have never actually seen a death, but I have heard of deaths, both amongst natives and Europeans.

19984. Not such as came under your own observation?—No. I see Sir William Moore in his book on the "Disease of India" under the section of Opium, says that it is very generally given in injurious although often times not in poisonous quantities. He recognizes that it is a very common custom in Rajputana, and that it is given to an injurious extent to children.

19985. Malarial troubles of various sorts are common enough in Rajputana?—Yes.

19986. I think you expressed the opinion that opium was not of any service in these troubles?—I said I had never heard of natives taking it for that purpose.

19987. Not for diarrhoea or dysentery?—Yes, for diarrhoea.

19988. For rheumatic pains and such like?—Yes.

19989. You have not yourself seen any use for it in intermittent malarial fever?—I have never heard that a native believes in it for intermittent fever.

19990. Have you ever used it yourself?—Never.

19991. I take it from you in that case your opinions are entirely theoretical on the point and you have never tried it?—That is so, but I judged from the experience of others. I have read a number of books on the subject. Of course my reading has been limited, in comparison with my brethren who have been near public libraries, but in Dr. Moorhead's work, which is a very great authority on these subjects, opium was even in his time supposed to be of benefit for fever. He devotes three pages to warning his medical brethren not to give opium in certain cases, and in fact it really amounts to this, that he himself does not give it, and warned others against doing so. So that I was basing my practice on authorities.

19992. On theoretical grounds?—Yes. In that sense.

19993. Of course in your large experience you must have drawn a difference between moderate and excessive consumers?—That is so.

The Revd.
Colin S.
Valentine,
L. L. D.

*The Revd.
Colin S.
Valentine,
LL. D.*

27 Jan. 1894.

19994. I suppose you have also observed that there was a very great difference in individuals in regard to their tolerance for opium?—Yes, amongst the same classes of people.

19995. Immense individual differences?—Yes.

19996. So that what would be excess for one might not be excess for another?—Yes.

19997. Bearing all those points in view, I presume you have known many examples of moderate consumers—that is, moderate for them who have maintained perfect health and perfect moral and mental integrity in spite of their taking opium in moderate quantities?—There is a very singular thing in regard to their physical health. There were many whose physical health I was not able to see had been deteriorated by taking it, but those people, so far as they were mentally and morally concerned, who I was able to tell by their appearance did take it, I considered to be very mentally deteriorated.

19998. I am speaking of those who took opium in moderation and whom you could not tell by their appearance?—The deterioration would be in appearance or symptom. If there was no symptom. I could not tell.

19999. I presume many took it whom you could not tell by their appearance?—I generally knew them from the manifestations of it.

20000. What manifestations?—Drowsiness and changeableness.

20001. That would be excess: would it not?—The distinction is difficult to establish.

20002. Is it your opinion that the opium habit shortens life?—I have known men eat opium for a series of years, but I never knew an opium-eater, whom I knew to be an opium-eater, that I could not tell from his appearance, and who had not very considerably deteriorated in his physical nature.

20003. I suppose you have known people of 70, 80 and 90 who have taken it?—70 years is an old age for anyone in my part of the country. A man who has reached the age of 40 is a man who is very decidedly downing hill in Rajputana. He is equal to a man of 55 years of age at home.

20004. (*Mr. Wilson.*) You have referred two or three times to the fact that the people amongst whom you lived in Rajputana were in the habit of taking both opium and alcohol. Do I understand that was to any considerable extent?—Among the Rajputs, yes.

20005. They take both?—Yes, also the farmers of Merwara. Mairwara is a part of Rajputana. These farmers take both to excess.

20006. Did the same individuals take both?—Yes.

20007. Sir William Roberts asked you a question about your own practice, and you said you had not prescribed opium for certain cases, and then he put it to you that your opinion was based purely on theoretical grounds. Will you explain what you mean by theoretical grounds?—The standard authorities that I consulted on the subject laid it down in their practice, more specially Dr. Moorhead, that it was not to be given for this and that case, and therefore basing my practice on the principles laid down by more experienced men than myself I have not given it.

20008. You based your abstinence from prescribing it on the experience of others, not on more theories?—Certainly, if I had thought opium was good for them I would have given that or anything else—my object was to cure my patient by any means.

20009. I understood you to say that had there been any strong feeling in this country against the work in which this Commission is engaged, there would have been popular demonstration?—Certainly.

20010. Might it not also be said that the absence of popular demonstration in favour of the work of this Commission is evidence that the people either do not know or do not care about it?—If there had been a feeling of opposition in the minds of the people against this Commission, or the object of the Commission, it would most certainly have manifested itself.

20011. There have been no popular demonstrations—what inference do you draw from that?—My inference is that if the people of this country had been against prohibition, they would have got up demonstrations against it.

20012. You have taken a great deal of trouble in preparing a kind of abstract or compendium of medical authorities in connection with opium?—Yes.

20013. You will have no objection to hand that abstract in to the Commission?—I shall be very glad to hand it in.

20014. (*Chairman.*) We will consider how it shall be dealt with.

20015. (*Sir James Lyall.*) Did you say you never used opium in connection with malarious diseases?—I have used opium in connection with diarrhoea, but whether the diarrhoea was malarial or otherwise, I was not in a position to state. There is such a thing as diarrhoea from many causes besides malaria, but if the diarrhoea was the result of malaria, I have used opium for that purpose.

20016. You have not used it otherwise than for that particular disease?—Not for malaria.

20017. Do you know Dr. Pringle who is a great supporter of the Anti-Opium cause?—Yes.

20018. He has sent me a report of a speech, and I have no doubt to the other members of the Commission as well—that he made lately in England. I observe that he says he always used opium in malaria in conjunction with ipecacuanha, and that it was the most sovereign medicine to use in cases of malarious fever?—I believe he did say that.

20019. You have not done so?—No, I had a case of malaria in Ajmere where a man had fever, and when he came over to my place in Behawari I knew distinctly that diarrhoea was vicarious to the fever, and I treated him with quinine, not with opium.

20020. Perhaps you have some prejudice against it?—Not the slightest; if opium would have cured my patient, I would have given it to him or anything else—Holloway's Pills, or anything else that would cure him. But I consider that the prescribing of opium by a careful physician is quite another thing from the wholesale way it is used by habitual opium-eaters.

20021. (*Chairman.*) As you are aware, the circumstances which have led to the appointment of this Commission were what I may call, originally Parliamentary circumstances. The representatives of the Anti-Opium Association were asking the Imperial Parliament to bring pressure to bear upon the Government of India with a view to the prohibition of the use of opium, excepting for medical purposes—that was so, was it not?—Yes.

20022. You are aware that many witnesses of great weight and authority who have appeared before us said that the exercise of such an authority and the issue of such a prohibition would involve what was in their judgment a certain hazard of giving offence to the popular opinion of this country?—Yes.

20023. You have vindicated the position which was taken up by the Anti-Opium Association in this matter by an appeal to the action which the Government has taken in abolishing a long list of the manners and customs of India by the exercise of its authority, is that so?—It is so.

20024. Do you think that the grounds on which you are now appealing to the Imperial Parliament for the exercise of its authority in the matter of opium are as obvious and as conclusive, and that they appeal as strongly to the general sense and feelings of mercy and pity which are so deeply moved when we read that long list of the manners and customs which have been abolished which you have placed in our hands. The list included the murder of parents, the murder of children, human sacrifice, suicide, voluntary torment by hook-swinging, by thigh-piercing, by tongue-extraction, falling on knives, involuntary torment, barbarous executions, mutilation of criminals, extraction of evidence by torture, bloody ordeals, cutting off the noses of women, slavery, extortions, and the like. Do you think that the Anti-Opium Association can appeal to the feeling of humanity and to the sympathy for misery, which I hope widely prevails, with the same force with regard to opium as in the case of these things you have mentioned?—I have not put it in that way.

20025. Having regard also to the fact which you must recognize that we have had before us a very wide conflict of opinion from men who are recognized as having a high ability, whether they have appeared on one side or on the other, and men of spotless character—a difference of opinion which would not arise from the contemplation of this list of miseries which you have placed on our hands—how do you think the matter stands when that appeal is made to the Imperial Parliament in regard to opium as compared with these other practices?—The evils of opium are sufficient of themselves to warrant prohibition; whether it would be more or less so in the popular estimation of other people I cannot say.

20026. You only take the thing *per se*, you would not make a comparison?—Yes, that is my view.

20027. The witnesses who have appeared before us to recommend the policy which you have recommended with

regard to opium have all said that of the two things they either desire the prohibition or restriction of alcohol equally with the restriction of the use of opium, or that they think it is more needful to put a restriction upon the abuse of alcohol than upon the use of opium—what do you say?—Alcohol drinking is the vice of Europe: opium consumption is the vice of Asia. As opium is the subject before this Commission, and is so extensive and complicated, I thought it better to confine my attention solely to it, and leave the subject of alcohol to those whose duty it might be afterwards to examine this question. Besides, I felt that I was unable to deal with these comparatively, because the Rajputs and zemindars of Mairwara both ate opium and drank spirits which led me to conclude that the one vice leads to the other.

If it is true that drunkenness has greatly increased during the last few years in India—as some say it has—it is just possible that there may be a closer connection between them than has hitherto been recognised.

20028. What you would not say is that in your judgment a restriction upon the use of alcohol except for medical purposes was undesirable?—On that subject I would not pass any opinion; I would deal with the subject of opium as it was before me, in the same way as I would deal with a case of cholera and a case of pneumonia.

20029. On the question of alcohol you desire to be silent?—Yes, entirely silent, because it is not before the Commission.

20030. We are bound in estimating the weight of authority of the witnesses who come before us—I may say I receive your testimony with great respect—to have some judgment as to their general attitude of mind in relation to dealing with the sale and the policy which Government ought to pursue with regard to stimulants?—As far as policy and politics go, I am extremely ignorant.

20031. You are recommending a policy?—If there was a Commission in connection with alcohol I should be glad to give my contribution to it, small and unimportant as it might be.

20032. I have no doubt what its character would be, and I do not respect you one whit the less because of what I apprehend you would say to that Commission?—I believe I use alcohol in my practice much more than those who use it even as an article of food every day. In connection with my medical practice I give alcohol as freely, and sometimes

The witness withdrew.

Babu BANI KANTA DATTA called in and examined.

20033. (Mr. Wilson.) You are a Professor at St. John's College, Agra?—Yes.

20039. Professor of what?—Mathematics, Logic, and Science.

20040. What is St. John's College?—A missionary college attached to the Church of England.

20041. Have you been Secretary of the Students' Total Abstinence Band at Agra for four years?—Yes.

20042. Have you paid some attention to the opium question?—As Secretary I paid much attention to the opium question. I was always provided with tracts by the Anti-Opium Society, so that my interest was aroused by the question.

20043. Is it the lower class Hindus who sometimes take country spirit or *ganja*?—Yes.

20044. Brahmins frequently take *bhang*?—Yes.

20045. Is it your opinion that it is the intervening classes who consume opium, and that the number is not very great?—Among the Hindus the number is not very great.

20046. Is it your opinion that when opium is taken moderately, it does no perceptible injury, though in the long run the consumer becomes emaciated?—I have seen cases in which opium is taken moderately. When I say moderately, I mean to say that they generally increase their dose after a month or so. They will take a certain quantity, and after that they will increase the dose little by little; they generally do that, and then they become emaciated.

20047. Have you any general remarks to make with regard to the opium habit?—When taken moderately opium eating does not do perceptible injury, though in the long run the consumer becomes emaciated, especially if he cannot afford to take, as is the case with poor men, a sufficient quantity of sustaining food, as milk, ghee, etc. It is found that an opium-eater is capable of doing more work than an abstainer, so long as he is under the influence

much more freely than some people who do not use the same views morally in connection with it.

20033. We are sent here as a Commission with a view to enable us to advise Parliament as to the action which it ought to pursue in relation to the sale of opium in India—would you say that in your judgment opium was doing more harm to India than alcohol was doing in our own country?—I would not say anything on the subject.

20034. You would not contest that position if I assumed it?—I have not assumed the position, but in this country the parties with whom I have spent most of my life use both.

20035. If we were anxious to provide material for the guidance of Parliamentary action in England, the question I put to you is a very fair one?—Yes, if that subject were up for examination in Parliament.

20036. (Sir James Lyall.) With regard to this list that you have given of cruel customs abolished and of reforms carried out in India by the British Government, is it not true that most of the cruel customs of which you have given a list have their parallel in the old customs of Europe, for instance, the burning of heretics, the burning of witches, the torturing of witnesses, the hanging men for stealing a sheep or a deer, ordeals by fire and water, and so again such reforms as freedom of preaching new religions, freedom from religious tests—is it not the fact that in all these matters reforms were first effected in England and then after a long interval and with much patience we enforced a somewhat similarly (2) reform in India? But have we yet done anything in England equivalent to what is now proposed, that is, the prohibition of the use of opium by penal laws?—All these cruelties which you have mentioned as having taken place in England were reforms which have been brought about by the people themselves through their Parliamentary representatives. They were all right and necessary reforms, but I do not see any comparison between the two cases.

20037. My point is that they were first carried out in England and, after a long experience of their success there, with much patience and very gradually we effected something similar in India; but have we yet done anything in England which is equivalent or analogous to what the Anti-Opium Society now proposes should be enforced in India?—I do not know. There are many abuses to be reformed in England, and we are reforming them every year. As to the relative importance or otherwise of this, I am not in a position to say because I do not know.

of the stimulant. But as soon as the effect is over he becomes dull and stupid. Opium-eaters are very often absent-minded. They are looked down upon by society. In these Provinces *Afimchi* (opium-eater) is a term of contempt. But opium-smoking is far more injurious. It makes a man weaker and weaker day by day, and at last reduces him to a mere skeleton. His existence is simply miserable. One can know an opium-smoker by sight. Among the well-to-do opium is generally taken as an aphrodisiac. And for this reason a woman of bad character was always attached to an opium den, before these dens were closed by Government. The poor people, when they cannot afford to buy opium, turn beggars and petty thieves for its sake, and are a constant source of trouble to society as well as to members of their family. In these Provinces opium is generally administered to a patient suffering from gout, rheumatism, diarrhoea, dysentery, or any kind of bodily pain acquired through cold, and it does him much good. But if a man takes to opium in a healthy state of body, no medicine produces upon him the desired effect when he suffers from dysentery or diarrhoea. One of my very near relations was attacked with dysentery the year before last. The allopathic physicians as well as the Vaid under whose treatment he was alternately placed, were of opinion that as he was a habitual opium-eater no medicine would have its proper effect upon him. And the result was that the patient died. In these Provinces ignorant mothers give small pills of opium to their children to produce sleep, and thus enable them to do their household work. Opium is generally used as a means to commit suicide. The consumers of opium say that it is impossible for them to give up the habit; but I believe it can be relinquished. An opium-eater when sent to jail is not supplied with his usual dose of opium.

20048. I think you have no personal or special knowledge in relation to the cultivation in Behar?—No, I have not.

The Revd.
Colin S.
Valentine,
L.L.D.

27 Jan. 1894.

Babu
Bani Kanta
Datta.

Babu
Bani Kanta
Datta.
27 Jan. 1894.

20049. What have you to say with regard to prohibition?—In my opinion, it is desirable to prohibit the sale of opium, excepting for medical purposes. And the loss of revenue should be met with, not by taxing an already overburdened people, but by retrenchments in Home and Military charges, by discontinuing the service compensation allowances to Europeans, by reducing the number of officers in the Public Works Department, and by development of Indian resources. We shall be very thankful if the British Treasury will help us a little in this matter.

20050. You think it is desirable to prohibit the sale of opium excepting for medical purposes?—Yes.

20051. Do you think that if it were done it would meet with popular approval in this part of the country, or do you think, on the other hand, it would lead to political discontent and trouble?—My opinion is that those persons who are newly initiated in the habit will resent it, but those who are habitual consumers and the rest of the public would be very glad if prohibition were adopted.

20052. (Mr. Mowbray.) How long have you been a Professor at Agra?—About five years.

20053. Are you a native of Agra?—No, I was educated at Allahabad. I was born at Cawnpore.

20054. What is your age?—About 28 years.

20055. How many students are there at St. John's College, Agra?—About 600 students.

20056. I understand it is in connection with the Church of England?—Yes.

20057. Are there many Christians among the students?—Yes, I think there are about 150 or more native Christians.

20058. Are you a Christian yourself?—No.

20059. You have expressed a confident opinion about the general opinion of this part of India. What is that based upon beyond your intercourse with the Students' Total Abstinence Band?—I mix with the public also. I do not base my experience on my connection with the Abstinence Society; I move among the public, and I gather my opinion from them, and besides that I have watched some of the opium shops here.

20060. I wanted to know whether you had any opportunity of judging of the feeling of the people of Agra more than any one else who has been here for some years?—I am acquainted with all the respectable people of Agra.

20061. We are told that the consumption of opium is greatest among those who are not respectable people?—That is so.

The witness withdrew.

20062. Therefore a person who mixed with those classes who consumed opium might be in a better position to judge of the question than another person?—I have mixed with people who take opium, and it is their opinion also that opium should be prohibited.

20063. Have they taken any means for showing their desire that it should be prohibited?—No, they have not taken any means for that purpose.

20064. (Mr. Fanshawe.) I understand that your experience has been in the towns, and that you have no experience in districts?—No. I have had experience in several towns, Cawnpore, Lucknow and Allahabad, but not in the districts.

20065. You have referred to an *Afimehi*; that would mean an opium-eater in excess, would it not?—No, it really means an opium-eater. It is taken generally in the sense of an opium-eater in excess, but it means an opium-eater.

20066. It generally means an opium-eater in excess?—Yes.

20067. (Sir James Lyall.) I gathered from one of your remarks that you think the well-to-do people used to frequent the opium-dens?—No, they used to form their own dens.

20068. Supposing it was not possible to meet the loss of revenue by a reduction in Home and Military charges and cutting down expenses in that way, extra taxation would be necessary; would it not?—Of course if Government wants to stop the opium, it would be necessary.

20069. Have you taken that into account in answering, as you have done, rather boldly, for the state of public opinion on the question?—The public would resent it in that case.

20070. (Maharaja of Darbhanga.) You said the prohibition of opium would be welcomed by opium-eaters; how do you form that opinion?—From the opinion of the habitual opium-eaters and from some of the well-to-do people.

20071. If they do not like the habit of taking opium, why do they not leave it off?—They say they cannot; that is their answer. I wanted to speak about one more point. You asked Dr. Valentine about the state of public opinion here, and you said, why is there no public demonstration either in favour of it or against it; the reason is simple, the people would welcome it very well, but the only uncertainty is about the revenue, and therefore they do not organise any meetings, that is the general reason.

20072. (Mr. Fanshawe.) You are speaking now of Agra itself?—Not only Agra, but of all the cities here.

20073. You are speaking of city populations?—Yes.

Babu
Nilmani
Dhar,
B.A., B.L.

Babu NILMANI DHAR, B.A., B.L., called in and examined.

20074. (Mr. Wilson.) You are a Bachelor of Arts, and a Bachelor of Laws of Calcutta University, and a Vakil of Calcutta High Court, and Professor of Law at Agra College?—Yes.

20075. You are a Bengali, and your experience is amongst Bengalis?—Yes.

20076. Do I understand that most of what you wish to say is the result of your own observation, or is it the result of information and conversation with other people?—Most of it is from my own observation.

20077. Is it your opinion that people are rather ashamed of taking opium so that it is difficult to know the extent to which it prevails?—Yes.

20078. Have you known cases yourself of the great difficulty of abstaining from the opium habit when once it has been contracted?—Yes.

20079. Is there a tendency to increase the dose from time to time?—Yes.

20080. Can you tell me very briefly what you think of the results of taking opium?—Do you think it is physically injurious?—Yes, it is physically injurious.

20081. Do you mean in small doses constantly taken, or are you referring to cases in which large quantities are consumed?—In large quantities the effect is sooner observed, but in small quantities the effect is observed after a long time.

20082. Is it the case that the effects are less observable in well-to-do people who can take plenty of good food, and that they are more disastrous in the case of the poor whose means are very limited?—Yes.

20083. In reference to the effects on the mental constitution, do you think it also injurious?—Yes, it brings on sleepiness, and people cannot pay proper attention to their work. I know some fellow pleaders who used to take opium, and they would go to sleep while going through the papers of a case and while the other side was arguing.

20084. You knew a good Sanskrit scholar who was a failure in life through taking opium?—Yes. He was once editor of a paper, and a schoolmaster, but he failed in every thing owing to his habit of taking opium.

20085. Is it your opinion that morally considered opium-smoking is bad?—Yes, poor people who cannot pay for their opium turn petty thieves.

20086. Is that the case also as regards eating, or do you confine that to smoking?—I would confine that to smoking.

20087. What have you to say with regard to opium in malarious districts?—I was for twelve years in a malarious district—Midnapur. Midnapur was not malarious when I went there first, but on account of the irrigation works, the canals and the embankment put across the river the country afterwards became damp and malarious. It was malaria that compelled me to leave Bengal and seek employment in the North-West Provinces. I suffered two years from malaria, and some of the members of my family suffered from it. But no doctor ever prescribed opium or any preparation of it for malaria. Malaria deranges the liver and enlarges the spleen. Opium cannot improve the function of the liver. I am no doctor but I speak as a patient. Opium produces constipation and makes the liver more dull. Evacuants are necessary to improve the function of the liver. My own liver got deranged from

malaria and I could not digest my food properly. A friend advised me to take opium. He thought I had ordinary diarrhoea; it is generally believed that opium is good for diarrhoea. But the diarrhoea I had was owing to malarious fever. My friend could not of course make that distinction. He advised me to take opium. I did it, but found that instead of doing me good it made me worse, for the liver became more torpid than before. I have seen and used many prescriptions for malarious fever by European and Native doctors, but I have never seen them use a grain of opium. I have seen them prescribe quinine, arsenic, iron, phosphorus and acids, but never opium.

20088. What do you say in reference to opium giving additional power for work?—Those who are addicted to opium cannot work without it. They feel very dull and stupid and they must have a stimulant before they can work. But opium cannot make those who do not take it more active. Its effect will be just the opposite because it brings on drowsiness and sleepiness.

20089. What can you tell us of the general reputation of people who are in the habit of taking opium?—The habit of eating and smoking opium is looked upon as disgraceful. Smoking is more humiliating than eating opium. People will seldom confess that they eat or smoke opium. It is therefore difficult to ascertain the number of people that are addicted to the use of it. They always take it secretly.

20090. Have you anything to say as to how the loss of revenue might be made up?—A reduction of civil and military charges and a larger employment of native agency will enable Government to bear the loss of the opium revenue.

20091. Are you in favour of some measure of prohibition which would still allow people to obtain opium for medical purposes?—Yes, for medical purposes it is a powerful medicine, but it is a poison at the same time, and it should not be allowed to be consumed ordinarily.

20092. What do you think the public at large would say in reference to such a proposal?—The most respectable, the most intelligent and educated portions of the community would accept it thankfully, and if it were known that the Government actually desired to stop opium consumption, it would be accepted by those who would otherwise grumble at it. I believe the percentage of opium-smokers and opium-eaters is not great, amounting to about 5 per cent. of the population, and even if they grumble, I do not fear any political danger from their grumbling.

20093. (*Mr. Mowbray.*) What is your age?—50.

20094. You have only had experience in Bengal with regard to this question?—Yes.

20095. Could you tell me anything about the Agra College—how many students are there?—About 25 in the College Department only.

20096. Of what age?—In the College Department from 15 to 25. There is a School Department.

20097. The students in the School Department are of course younger?—Yes.

20098. Is the College endowed by Government?—It is aided by Government.

20099. Is the Professor of Law paid by Government?—The Government gives some aid. It was originally a Government institution altogether, but the Government has withdrawn its connection from several high educational establishments, and it only aids our College now.

20100. You have referred in this paper before me to the reduction of civil and military charges. I do not know whether there is any possibility of reducing the Professorships of Law at the Colleges and Universities?—May I ask whether they are included in the civil charges?—I am not in a position to answer that question.

20101. I notice that you say you have seen the effect of opium-eating and smoking amongst your neighbours, relatives and fellow-pleaders. I hope for your sake the moral effects of opium which you have given us are not derived from your personal experience of your neighbours, relatives and fellow-pleaders?—With regard to pleaders, I would say that the injurious effect on them is mental and physical.

20102. You said that you had seen the effect of opium-eating and smoking among your neighbours, relatives and fellow-pleaders?—Yes.

20103. You also said that opium-smokers are known to be petty thieves: do you get that information from your experience of your neighbours, relatives and fellow-pleaders?—I have explained that the poor people who could not obtain opium for smoking would steal rather than go without smoking.

20104. Then in fact what you have told us with regard to opium-smoking is general hearsay, and not your own personal experience?—That may be.

20105. (*Mr. Haridas Voharidas.*) You said your experience was among the Bengalis, so that you have mixed with the poor people as well?—Yes.

20106. (*Mr. Fanshawe.*) When you speak of the public at large as being willing to accept prohibition, are you referring to the public of the Lower Provinces?—I said the most respectable and intelligent portions.

20107. Are you referring to those portions of the public in the Lower Provinces of Bengal?—Yes.

20108. You said that only 5 per cent. of the population consume opium, would you limit that in the same way to your own province?—Yes, but I have said that it is very difficult to estimate.

20109. Do you wish us to understand that there is no moderate consumption in Bengal?—There is a moderate consumption, but the tendency is to increase the dose.

20110. Is it within your knowledge that opium is used among villagers and others as a domestic remedy against colds and pains, and so on?—Opium-eaters will prescribe it for any disease.

20111. I mean a domestic use among the people generally, whether in the district of Midnapur or in Bengal?—Those who do not use it, do not prescribe it.

20112. You think opium is not used as a domestic remedy?—I have seen it used for external application, for pains, etc.

20113. Among the people?—Yes.

20114. (*Sir James Lyall.*) We have been told by a certain number of witnesses that there is a belief in the country that opium taken in moderate doses after 40 years of age tends to prolong life, is that so?—It is a belief. In many cases it is an excuse for taking opium, but in some cases there might be such a belief.

20115. That is opposed to your view? You believe that even in moderate doses it has a deleterious effect after a time?—That is my opinion.

20116. You say the most intelligent and educated portion of the community will accept prohibition thankfully?—That is my opinion.

20117. Do you think that their acceptance is dependent on no extra taxation being imposed, or is it independent of that?—I believe the country is not prepared to bear further taxation.

20118. If prohibition involves further taxation, they would not like it?—They would not. For myself I am very strong against it, and I would be glad to offer my mite, but the people generally would not do it.

20119. When you speak of the most respectable and intelligent portion of the community, those people are chiefly found in the towns, are they not?—In the towns as well as in the mofussil. I speak of respectable pleaders in the mofussil whom I know.

20120. What percentage do they bear to the total population of the whole country? Do you suppose it is half per cent.?—It is very small. Education has not spread much yet. Perhaps only one per cent. of the population are English educated.

20121. So that you are speaking of a very small fraction of the people, although they are an important fraction?—They might be called the leaders of society, because they are educated.

20122. The country people who are not English educated, the masses of the country people who follow their old customs and ideas, they have not yet accepted the English educated people as their leaders, have they?—In many cases they have.

20123. Some of them?—It is always the case, the uneducated are led by the educated.

20124. (*Chairman.*) Are you in favour of a policy of restriction upon the sale of stimulants generally?—Yes.

The witness withdrew.

Babu Nilmani Dhar,
B.A., B.L.
27 Jan. 1894.

Zabardast
Khan.

27 Jan. 1894. 20125. (*Mr. Wilson.*) Were you for more than 25 years in the police of Fatehgarh?—Yes, and at Cawnpore.

20126. You are now a police pensioner?—I am.

20127. Have you been practising medicine in this city?—In both Fatehgarh and Cawnpore, not here in Agra.

20128. You have not had a regular medical education?—No.

20129. What system of medicine do you practise?—Both the homœopathic and allopathic systems.

20130. While you were in the police did you find that opium was a common mode of committing suicide?—Yes, several times.

20131. Is it your opinion that opium is very powerful as a medicine?—Most certainly, as an astringent in diarrhoea and in rheumatism and so forth.

20132. But when people take it otherwise than as a medicine, do you find there is a tendency with them to go on increasing the dose?—Certainly, they cannot go on without it.

20133. What is your opinion of the habit of taking small doses of opium daily by persons who are not ill but in good health?—It is not good for them when they are in good health.

20134. Are persons who take opium otherwise than for illness or disease looked upon as discreditable?—Certainly, they are. If two men came to me for employment as servants, and one is an opium-eater, I would take the one who did not take opium.

20135. Are you speaking of persons who take small quantities or of persons who take excess?—Those who take small quantities always increase the dose and they go to excess.

20136. Are you in favour of some measure of prohibition except for medical purposes?—Yes, I am.

20137. If something of that kind is done, do you think there would be discontent and dissatisfaction amongst the people?—Most certainly, the opium-eaters and the smokers will grumble, but it will not affect the Government at all.

20138. What will the general body of the people say?—The respectable people will be glad that this evil has been prohibited.

20139. (*Mr. Haridas Voharidas.*) You were an officer in the police?—Yes.

20140. Had you to appoint constables?—No, I was a writer.

20141. When you speak of excess, do you mean that every one goes to a point when injury is caused to his health and character? You say the moderate eater always goes to excess?—He cannot help it, because the moderate dose which he takes does not satisfy him after a time.

20142. Do you mean he always goes to a point when injury is caused to his health and character?—He does not care for his health, but thinks it is far better for him.

20143. We have been told this morning that 90 per cent. of the Rajputs take opium, so that 90 per cent. of them have their character or health ruined by the habit?—I have nothing to do with the Rajputs.

ZABARDAST KHAN called in and examined.

20144. From your own experience you say moderate consumers go to excess?—Certainly.

20145. (*Sir James Lyall.*) Of what place are you a native?—Farukhabad.

20146. When did you leave the police?—I retired on pension in 1884.

20147. You said that you practised both according to the homœopathic and allopathic systems?—Yes.

20148. Do you practise according to the Yunani system as well?—Sometimes.

20149. You have learnt it from books I suppose?—Yes, and by attending at the dispensaries and consulting the medical officers.

20150. You say opium ought not to be allowed to be used without a medical prescription?—Yes.

20151. Ought the power of giving a prescription to be confined to official doctors, or ought all practitioners to be allowed to give prescriptions?—Those who are not well up in their knowledge might make a mistake in prescribing opium for any disease, but I would not.

20152. You would ask for the privilege yourself, I suppose?—Yes.

20153. Would you restrict it in the case of Vaidas and Hakims in the villages?—If I had the power to restrict I would certainly do.

20154. Would you let them prescribe opium?—I have no power to stop them. They can do whatever they like. I have no control over them.

20155. There are a great many of them all over the country?—Yes, there are.

20156. Anybody can set up as Hakims and Vaidas in the same way as you have done?—Yes, but they should be allowed by Government.

20157. But any Vaid or Hakim can do so?—Yes.

20158. You would have an enormous number of persons who were allowed to prescribe opium all over the country?—I have heard that they prescribe, but it might be injurious to health.

20159. But whereas there is now only one opium shop for about 43,000 people in the North-West Provinces, if you gave every Hakim and Vaid and doctor the right to prescribe and dispense opium, you would have very many more places where opium could be obtained?—Besides the Government shop in the North-Western Provinces there would be more places for sale of opium if the Hakims, Vaidas, and doctors are freely allowed to prescribe.

20160. (*Mr. Wilson.*) Can the Hakims and Vaidas give their patients opium now?—The Hakims and Vaidas, as I said, are already prescribing.

20161. (*Chairman.*) Are you in favour of a rule of prohibition applying equally to alcohol and opium?—I would prohibit both opium and alcohol, except when prescribed by the medical men for medicine.

20162. Which do you think is the greater evil in India?—They are both used in India, but I believe opium is not used in England.

20163. Which of the two is the greater evil?—Opium.

Adjourned to Monday next at Jaipur.
